The X-10 Powerhouse

Superior firepower

► MACH II[™] and MACH III[™] JOYSTICKS

The second generation MACH II and MACH III Joysticks incorporate a new slide-switch spring disconnect feature that requires no stick deflection and new rotary trims which are four times more precise.

Additional features include: "spring centering" or "positive true-positioning" modes of operation, electrical trims for each axis, two fire buttons on the deck of the control and a stainless steel ball as the main pivot for added precision and durability. Our MACH III Joystick has an added fire button on the stick handle.

These highly accurate and reliable 360-degree microcomputer cursor controls used for games, business and graphics applications provide more features, greater durability, and longer life cycles. Plug-in compatible with Apple II, IIE, IIC, IBM PC, PCjr and TRS-80 Color Computers. MACH II \$44.95 / MACH III \$54.95

► PADDLESTICKS™

PADDLESTICKS are a new and unique paddle control design that promises to return the fun and excitement back to paddletype games. They are faster, easier to operate and less fatiguing than conventional-type paddles. The PADDLESTICKS operate as a single-axis joystick and are currently plug-in compatible with the Apple II, IIE and IIC personal computers. \$44.95 (pair)

We manufacture a complete line of OEM Joysticks for industrial applications. Dealer and OEM inquiries invited. Apple II, IIE, IIC, IBM PC, PCjr and TRS-80 are registered trademarks of Apple Computer Inc., International Business Machines and Tandy Corp. respectively.

AppleWorks

Only Pinpoint adds pictures to any AppleWorks document. So you can create party invitations that are truly exciting. Even if the weather isn't.

Don't spend hours addressing envelopes and misspelling names. Pinpoint picks up names and addresses from invitations (or any documents) and drops them, letter perfect, onto envelopes. Even if you don't always spell those tonguetwisting names right, at least you'll be consistent.

One glance and you can see your social schedule for months ahead. So it's a snap to slip this year's party in between the garlic festival and your breakdancing lessons.

Jot down important thoughts whenever they strike. The note pad is perfect for reminding you of things you can't do without. Or things you can.

Impress a friend with a personal invitation. It's easy. The automatic dialer finds phone numbers displayed anywhere on the screen, not just in special files.

And it re-dials busy numbers automatically. So you're next in line as soon as your friend's broker hangs up.

Accessories.\$69.

Nine accessories to be precise. And in no time, they'll be so much a part of your AppleWorks routine, you'll think of them as built-in, not added-on. Why?

For openers, these handy desktop timesavers "pop-up" via windows from inside AppleWorks (and most other ProDOS programs). So you can stop what you're doing to jot down a note, address a letter, or call a friend.

You can even figure out some figures with our calculator. Tap data bases or other computers through our communications window. Even whip out short memos, forms and labels with our line-at-a-time typewriter. And then continue AppleWorks without missing a beat. Or a byte.

What's more, Pinpoint's as easy to use as AppleWorks itself.

Same commands. Same hardware.

Plus you can boost Pinpoint's performance by adding an Apple Enhanced Memory Card, the new, high-capacity UniDisk 3.5 floppy, a hard disk, a modem, or one of many popular printers. And, with our Pinpoint Toolkit, you can even add desktop accessories of your own.

Want more?

Then visit your local computer shop.

Or call (415) 530-1726 for a

dealer near you. (Dealers. Please call First Software (800) 343-1290 or Softsel (800) 645-7778.)

You'll see that Pinpoint does more than give AppleWorks a handful of accessories.

It gives AppleWorks the works.

© 1985 Pinpoint Publishing AppleWorks, ProDOS, UniDisk 3.5, and Enhanced Memory Card are trademarks, while Apple is a registered trademark, of Apple Computer, Inc.

EDITORIAL

Preparing for the Revolution

by Susan Gubernat

One of the least spectacular of 20th century "revolutions" in education fizzled out while some of us were in grammar school: the introduction of televised lessons into the curriculum. Remember?

Despite the brouhaha that accompanied the installation of a TV in every classroom—in ours, placed high up on a platform in a corner where sticky fingers could never reach the channel flipper—even we kids knew it wouldn't work. We could glean from skeptical teachers and doubting parents that nobody quite believed in the medium's message.

TV was a diversion. How could we take it all that seriously? The window shades would be pulled down at odd intervals during the day—to heighten the contrast. The teacher faded into the background and we'd watch someone on screen perform a science experiment. Or we'd hold a one-sided Spanish conversation with the language teacher on the tube.

Ultimately, there was little accountability—jargon that entered the education field only with the competency-mindedness of the 80's. We all knew that "real" work happened once the window shades slapped back up into place.

Now we can hear a reprise of the promises once made about television surrounding the educational potential of the microcomputer—and with even more urgency. After all, we're entering the Information Age wherein ability to manipulate data files will be equated with power. Parents often base their plans to purchase a home computer not on perceived current need but out of fear that their children will be left behind in the computer revolution.

What we need, on the other hand, are teachers, parents, members of the community at large, who together help make informed decisions about computer purchases, who serve as resources for one another, who turn to the computer not out of panic or with unrealistic expectations, but with clearly defined goals and projects for computer use in the schools.

We know that the mere introduction of new technology into the home or the classroom doesn't automatically transform learning. Yet, at the same time, a simple analogy made between television (or other audio-visual stimuli) and microcomputers is not a fair one. What are the differences?

The nature of the computer is interactive, involving a rhythm of give and take, even the illusion of dialogue between mind and machine. But drill and practice software that turns the computer into a mere scorekeeper, the child into the perennial test-taker, makes the computer a monolith possessing the "right" answers. More creative uses of the microcomputer transform it into a tutor whose prompt-

ing can cajole even the reluctant learner, in spite of himself or herself.

The power of the computer diffuses power throughout the classroom—and beyond.

But merely plunking a system down in front of those who didn't help decide its feasibility, its purposes, its applications, is often counterproductive. Budget allocations for teacher training to implement computers across the curriculum—and not just in a programming context—are as necessary as the original equipment allocations.

Meanwhile, for today's educator, Apples are a secure buy. Not only are the folks at Apple fond of jesting that "no teacher has ever been fired for buying an Apple" but also educators themselves perceive that the machine has served them well and will continue to do so. IBM and other manufacturers greedily eyeing the education market have not only the clout of a huge Apple II software library to contend with but also the perception and experience of influential educators like LeRoy Finkle, a member of the board of Computer Using Educators. He went so far as to tell us recently that "I can do everything I need to do on an Apple II with 64K."

In a market distinguished more and more by clanging bells and shrill whistles, we find that a reassuring testimonial.

UNDER PIRE!

It was quiet under the blistering Russian sun except for the rumble of gunfire off through the hills. Through his binoculars, the Soviet lieutenant could see the road leading into the dacha. The hedge blocked his view of most of the ground, and nothing could be seen moving among the second story windows. His orders were to take his squads and three T34/76 tanks in and occupy the abandoned country house.

From the wheatfields of Russia to the hedgerows of northern France, this is the world of **Under Fire**, the game of tactical World War II combat. Commanding an array of armor, infantry and support guns, take your men into the razor's edge of combat.

The lieutenant stood up and waved his arm in a circle. Around him arose fifty men who deployed in a line. Silently, they passed through the cool woods toward the hedge, their eyes scanning the windows, their fingers calmly resting on the trigger guards of their rifles.

Men and weapons from the United States, Germany and the Soviet Union are represented. The map is a topographic recreation of the ground they fought over, shown in three different scales. Choose the situational map for the strategic flow of battle, or the tactical screen that shows the terrain in amazing detail.

They were 50 meters from the hedge when the land exploded in smoke and flame. A machine-gun nest spoke from a window, sending the patrol to the earth. The hissing rocket from a panzerfaust caused one of the tanks to explode, its crew bailing out of all hatches. Two Panther tanks moved out from under their cover. The lieutenant ran forward in a crouch, waving to the squads that were not pinned under fire to follow.

Strategic and Tactical Maps.

Computer Requirements:

Apple® II family of computers (II+, IIe, or IIc), 64K One disk drive

Joystick required for II+; optional for IIe and IIc $Mockingboard^{TM}$ optional

TIME SCALE: varies.

MAP SCALE: From 12 meters/position to 72 meters.

UNIT SCALE: infantry squad, individual tanks and

PLAYERS: One or two, also recommended for team

PLAYING TIME: From 10 minutes for a two-squad battle to five hours for 32-squad firefight. **GOMPLEXITY:** High.

SOLITAIRE SUITABILTY: Very high.

Under Fire is The Avalon Hill Game Company's trademark for its Microcomputer Game of World War II Infantry Combat

Front line combat is never predictable. Hidden units can appear out of nowhere, attack and vanish again. If caught in the open, a green squad can break and suffer horrendous casualties, while veterans rush for cover. In **Under Fire**, squads are rated for morale and training. The computer handles all line-of-sight problems, and can direct the fire of your units. Without the complexities of figuring odds and terrain charts, finding the proper strategy depends upon instinct and experience. All of the uncertainties of combat are present.

The lieutenant and his patrol moved swiftly and methodically through the woods. One of the T34's entered the yard and was trading shots with the Panther. A German squad was suddenly flushed from their hidden position and was cut down by the tank's machine gun.

Under Fire, lets you begin play immediately! All orders are entered using simple keyboard or joystick commands, and there is a helpful tutorial in the rulebook to take you step-by-step into your first battle. The nine scenarios range from openfield firefights to house-to-house conflict. Each scenario can be different when you change the ten variables, including nationality, skill level and victory conditions.

A Wargame Construction Set!

Design your own maps and scenarios. It's easy with **Under Fire**. The Mapmaker disk can re-create the **bocage** of Normandy, the Russian steppes and the final assault on Berlin! Design the order of battle to emphasize infantry, armor or a mixture of the two. Choose among other factors, the weather, map scale, general orders and victory conditions. Order a squad to attack or defend terrain, destroy the enemy, delay the advance or break out of the pocket. Finally, save your own scenarios to disk and they'll be ready to play anytime (the computer is always willing to play). **Here's what you get:**

- Three disks: containing the game, a roster of German, Russian and American infantry and tanks, and nine scenarios. The Mapmaker disk helps you create maps for your own scenarios.
- An extensive rulebook, containing all the rules, tactical notes, a tutorial to start you on your first scenario right away, and an index of screen commands. \$59.95

inCider's BBS (bulletin-board system) (603) 924-9801

Hard to Find

Could you give me some information on hard-disk drives that are compatible with the Apple //c? I'm interested in buying one, but I haven't been able to find any that will work with my //c.

David Seidel 2877 Cedar Canvon Court Atlanta, GA 30345

The Quark QC10 hard-disk drive is the only one we know of that is compatible with the //c. For our reviewer's opinion of the QC10, check the July 1985 issue, page 82, and in "Hard-Driving Disks," September 1985, see p. 33. —eds.

B-B-BBS Anxiety

I haven't worked up the courage to call inCider's BBS yet. I'd like to, but I'm not certain I can handle it. I've called a few of our local systems, and they vary from one to the other. I find myself frequently relying on the help keys, and I often print the menus for future reference.

You could provide a service to those not too proficient in telecommunication by giving us an idea of what to expect when we call your BBS. You could print the menu and a few hints in a future issue. That might be just the thing to give me-and others who may need it-the confidence to begin using the system. It would also be helpful to know before dialing just what programs are available for downloading. Perhaps you could devote a little magazine space each month to new features on the system.

I am a true inCider fan. I appreciate the fact that you have remained faithful to Apple II owners. Right now, I'm subscribing to three computer magazines. When my subscriptions run out, I'll renew only inCider.

Rita Wax 7401 Sabal Drive Miami Lakes, FL 33014

Relax, Rita. Don't be afraid to call the BBS-just follow the prompts. Our BBS is very user-friendly, and it's online 24 hours a day. The number, for any telecommunicators who want to reach out and touch inCider, is (603) 924-9801.

Apple Affinity

If Apple Computer is to continue making a profit, it needs a better answer to the question "Why buy Apple?" than yours. In the July 1985 Letters column [p. 8], you told Robert Alekshun that "people buy a computer for the machine, not the company." You may want to get your readers' opinions on that.

When I bought my first and only computer last year, I chose the Apple //e-because of the company. The machine seemed overpriced (and still does), but I was impressed by the same factor you emphasized—the company had a record of support for older hardware. This loyalty to users has continued in the case of updates for the Mac and Lisa, as well as the //e, and that policy is in welcome contrast to that of other manufacturers.

Before Alekshun abandons Apple hardware, he might ask which companies have a better record of support for their machines. Like him, I've been unhappy with software from Apple, but the solution to that problem is to buy applications from other publishers. You can update or replace a program much less expensively than a computer.

Even if it is overpriced, when my simple, rugged, reliable //e stops working, I'll probably be ready for a //x, whatever that may be.

Ronald Counsell 603 East 34th Street Baltimore, MD 21218

Power Supply for Sale

I have a tip to pass on to other Apple users who purchased a Sider 10-megabyte hard disk from First Class Peripherals. [See inCider's review of The Sider in the April 1985 issue, p. 93, and Editors' Choice, May 1985, p. 128.]

If your system repeatedly crashes after a period of time, you may have a power problem. I connected the hard disk with no problems. Everything worked okay for 75 minutes—then the system crashed. I reset it, but it crashed again after only a few seconds. After the system cooled, it crashed again after 75 minutes.

I'm using the hard disk with a 128K Apple //e with the following equipment: extended 80-column card in the auxiliary slot; PCPI Applicard with CP/M 2.2 in slot 4; RS-232 card in slot 1; generic Super Serial card in slot 2; DuoDisk in slot 6; Sider hard disk in slot 7; and a cooling fan.

I ordered from Jameco Electronics a larger power supply (\$59.95), which was advertised in the *Computer Shopper News* as having sufficient power for four disk drives. The system hasn't crashed since. I've used it for five hours at a time without crashing.

Anyone want to buy an original Apple //e power supply?

Surry P. Everett Logman, SHAPE APO NY 09055

The quietest Apple - compatible disk drive is nearly half the cost of Apple.

It's Gamma.

Video Technology (U.S.) Inc.

Video Technology (U.S.) Inc. 2633 Greenleaf Elk Grove Village, IL 60007 (312) 640-1776 Gamma makes color-matched drives for Apple* IIc, IIe, and II+: fully compatible and quieter than Apple* accessory drives at roughly half the cost. PVC chassis absorbs sound. 6-month warranty.

APPLE IS A REGISTERED TRADEMARK OF APPLE COMPUTER INC.

SOME HISTORIC BREAKTHROUGHS DON'T TAKE AS MUCH EXPLAINING AS COMPUSERVE.

But then, some historic breakthroughs could only take you from the cave to the tar pits and back again.

CompuServe, on the other hand, makes a considerably more civilized contribution to your life.

It turns that marvel of the 20th century, the personal computer, into something useful.

Unlike most personal computer products you read about, CompuServe is an information service. It isn't software. It isn't

hardware. And you don't even have to know a thing about programming to use it. You subscribe to CompuServe—and 24 hours a day, 7 days a week, it puts a universe of information, entertainment and communications right at your fingertips.

A few of the hundreds of things you can do with CompuServe.

COMMUNICATE

EasyPlex™ Electronic Mail lets even beginners compose, edit, send and file messages the first time they get online. It puts friends, relatives and

business associates—anywhere in the country—in constant, convenient touch.

CB Simulator features 72 channels for "talking" with thousands of other enthusiastic subscribers throughout the country and Canada. The chatter

is frequently hilarious, the "handles" unforgettable, and the friendships hard and fast.

More than 100 Forums welcome your participation in "discussions" on all sorts of topics. There are Forums for computer owners,

gourmet cooks, veterinarians, pilots, golfers, musicians, you name it! Also, Electronic Conferencing lets businesses put heads together without anyone having to leave the shop.

Bulletin Boards let you "post" messages where thousands will see them. You can use our National Bulletin Board or the specialized Bulletin Boards found in just about every Forum.

HAVE FUN

Our full range of games includes "You Guessed It!", the first online TV-style game show you play for real prizes; and MegaWars III, offering the And there are board, parlor, sports and educational games to play alone or against other subscribers throughout the country.

Movie Reviews keep that big night at the movies from being a five star mistake.

SHOP

THE ELECTRONIC MALL™ gives you convenient, 24-hour-a-day, 7-day-a-week shopping for name brand goods and services at discount prices from nationally known stores and businesses.

SAVE ON TRIPS

Travelshopper™ lets you scan flight availabilities (on virtually any airline — worldwide), find airfare bargains and order

tickets right on your computer.

Worldwide Exchange sets you up with the perfect yacht, condo, villa, or whatever it takes to make your next vacation *a vacation*.

A to Z Travel/News Service provides the latest travel news plus complete information on over 20,000 hotels worldwide.

MAKE PHI BETA KAPPA

Grolier's Academic American Encyclopedia's Electronic Edition delivers a complete set of encyclope-

dias right to your living room just in time for today's homework. It's continuously updated ... and doesn't take an inch of extra shelf space.

The College Board, operated by the College Entrance Examination Board, gives tips on preparing for the SAT, choosing a college and getting financial aid.

KEEP HEALTHY

Healthnet will never replace a real, live doctor—but it is an excellent and readily available source of health and medical information for the public.

Human Sexuality gives the civilization that put a man on the moon an intelligent alternative to the daily "Advice to the Lovelorn" columns. Hundreds turn to it for real answers.

BE INFORMED

All the latest news is at your fingertips. Sources include the AP news wire (covering all 50 states plus

national news), the Washington Post, USA TODAY Update, specialized business and trade publications and more. You

can find out instantly what Congress did yesterday; who finally won the game; and what's happening back in Oskaloosa with the touch of a button. And our electronic clipping service lets you tell us what to watch for. We'll electronically find, clip and file news for you...to read whenever you'd like.

INVEST WISELY

Comprehensive investment help just might tell you more about the

stock you're looking at than the company's Chairman of the Board knows. (Don't know who he is? Chances are, we

can fill you in on that,

too.) CompuServe gives you complete statistics on over 10,000 NYSE, AMEX and OTC securities. Historic trading statistics on over 50,000

stocks, bonds, funds, issues and options. Five years of daily commodity quotes. Standard & Poor's. Value Line. And more than a dozen other investment tools.

Site II facilitates business decisions by providing you with demographic and sales potential information by state, county and zip code for the entire country.

National and Canadian business wires provide continuously updated news and press releases on hundreds of companies worldwide.

GET SPECIALIZED INFORMATION

Pilots get personalized flight plans, weather briefings, weather and radar maps, newsletters, etc.

Entrepreneurs use CompuServe too for complete step-by-step guidelines on how to incorporate the IBMs of tomorrow.

Lawyers, doctors, engineers, military veterans and businessmen of all types use similar specialized CompuServe resources pertinent to their unique needs.

And now for the pleasant surprise.

Although CompuServe makes the most of any computer, it's a remarkable value. With CompuServe, you get low start-up costs, low usage charges and local phone-call access in most major metropolitan areas.

Here's exactly how to use CompuServe.

First, relax.

There are no advanced computer skills required.

In fact, if you know how to buy breakfast, you already have the know-how you'll need to access any subject

in our system. That's because it's "menu-driven," so beginners can simply read the menus (lists of options) that appear on their screens and then type in their selections.

Experts can skip the menus and just type in "GO" followed by the abbreviation for whatever topic they're after.

In case you ever get lost or confused, just type in "H" for help, and we'll immediately cut in with instructions that should save the day.

Besides, you can either ask questions online through our Feedback service or phone our Customer Service Department.

How to subscribe.

To access CompuServe, you'll need a CompuServe Subscription Kit, a computer, a modem to connect your computer to your phone, and in some cases, easy-to-use communications software. (Check the information that

information that comes with your modem.)

With your Subscription Kit, you'll receive:

- a \$25 usage credit.
- a complete hardcover Users Guide.
- your own exclusive user ID number and preliminary password.
- a subscription to CompuServe's monthly magazine, Online Today.

Call **800-848-8199** (in Ohio, 614-457-0802) to order your Subscription Kit or to receive more information. Or mail this coupon.

Kits are also available in computer stores, electronic equipment outlets and household catalogs. You can also subscribe with materials you'll find packed right in with many computers and modems sold today.

Please send me additional information.
Please send me a CompuServe Subscription Kit.
I am enclosing my check for \$39.95, plus \$2.50 handling. (Add sales tax if delivered in Ohio.)

Apple Announces New Products That Dazzle, New Enhancements That Perform

pple Computer Inc. is now matching its lip-service support for the Apple II line with the introduction of six new peripherals in two categories: color capability and high performance. At the same time, Apple has worked closely with many third-party developers who have timed their new-software releases and updates to coincide with the new Apple hardware. (See the accompanying Product Information listing on p. 16 for names and addresses of vendors. At press time, Apple claimed that over 50 more developers were also working on products that will utilize the new disk format, RAM expansion, and/or color capability.)

According to Apple product manager Don Field, the latest high-performance products—the much-anticipated 3½-inch disk drive and a RAM (random access memory) expansion card (code-named "Slinky")—address the pressing needs of power users: more floppy-disk space and more memory. And he adds that Apple's composite color monitors for the //c and //e and new color ImageWriter printer are sure to please another important customer base—educators.

Power Up

The II RAM Expansion Card (see **Photo 1**) overcomes the memory limi-

Photo 1. The Apple II RAM Expansion Card.

tations of the Apple II line and establishes a standard for third-party expanded-memory applications. It provides 256K bytes to 1 megabyte of additional RAM for use as main mem-

ory or as a self-formatting RAM disk. Built into the card is the circuitry that programs need to access this extra memory. You can use the II RAM Expansion Card in an Apple II, II Plus, or //e by plugging it into any slot except slot 3 or the //e's auxiliary slot. A 256K card is priced at about \$250. Each additional 256K increment costs approximately \$100.

The UniDisk 3.5 (see **Photo 2**) is a double-sided version of the 3½-inch

Photo 2. The Apple UniDisk 3.5 and ColorMonitor.

Macintosh drive. Manufactured by Sony, it has a formatted capacity of 800K bytes—nearly six times the capacity of the Disk II 5½-inch floppydisk drive. According to Apple, you can use the UniDisk 3.5 as your boot drive or as a secondary drive. Coupled with the introduction of the UniDisk 3.5, Quark Inc. is releasing Catalyst 3.0, a software package that gives the Apple II an icon-based desktop similar to the Mac's. The UniDisk 3.5, without controller, costs approximately \$500.

The Apple Personal Modem (see **Photo 3**) is the third product in the

Photo 3. The Apple Personal Modem.

High Performance line. The 300/ 1200-baud modem is 100 percent Hayes-compatible and 100 percent AppleModem-compatible. It is easily configured via software rather than inconvenient DIP switches, and is priced at around \$400.

Color My World

The innovative ColorMonitor //e and ColorMonitor //c (see **Photo 2**), 13-inch, composite monitors, not only display color graphics, but can also display 80 columns of text in monochrome. They require no special interface devices and cost around \$450 each.

The ImageWriter II (see **Photo 4**) is a 10-inch color printer with 250-character-per-second speed in draft mode (slower in correspondence and near-

Photo 4. The Apple ImageWriter II with sheet feeder.

letter-quality modes), a 2K buffer, and its own expansion slot. The slot can hold a 32K print buffer or a card that lets you use the ImageWriter II as a print server on the AppleTalk Network currently available for the Mac. The ImageWriter II sells for about \$600. The two expansion boards are priced at approximately \$150 each. Another option available for the new printer is a cutsheet feeder, retailing for about \$250.

Software Conversions

"I'd like to wave a magic wand and make all disks 3½-inch overnight," says Roger Wagner, president of Roger Wagner Publishing and the author of inCider's Right of Assembly column. The introduction of the new hardware has produced a flurry in the software market as developers rush to upgrade existing packages and release new ones compatible with the Apple products (refer to the Product Information box on page 16). Most packages converted to 3½-inch format will now contain the programming necessary to let you take advantage of the II RAM's extra memory for data storage. Other products will now include programming that lets you use the Image-Writer It's color capabilities.

At Roger Wagner Publishing, the conversion of the mouse-driven word processor Mouse Write to high-performance and color standards has already been accomplished. "To the extent that third-party developers follow Apple standards, it's no problem," Wagner says. Roger Wagner products are not copy-protected—users of the "old" Mouse Write can update the package for the cost of mailing.

International Solutions will make 3½-inch disks available at the customer's request: You'll buy the 5½-inch version at the store and exchange it for the smaller disk through the mail. International's mouse-driven spreadsheet Mouse Calc and its new word processor Mouse Word both support the Apple RAM expansion card—International put the programs' designer, Luc Barthelet, on the Concorde from Paris to Sunnyvale, California, for a quick conversion

Pinpoint, a new desk-accessory package (notepad, calculator, appointment calendar, communications, and print utilities) for AppleWorks from Pinpoint Publishing (formerly Virtual Combinatics), works as is with the RAM board, and the company has no immediate plans for 3½-inch disks. Pinpoint is reportedly considering the smaller format for future releases.

Sorcim's **SuperCalc3a**, the most powerful spreadsheet available for the Apple II, produces graphs in living color on the new ImageWriter II and can utilize the II RAM's memory. Sorcim will continue to pack 5½-inch disks, but consumers can switch to 3½-inch format through a mail-exchange setup if they prefer.

Quicken personal-accounting software, from Intuit, will be available in both 3½-inch and 5½-inch formats. Manzainita sidestepped the obstacle of disk format neatly—its new business-accounting package,

BusinessWorks, will be available only in a 3½-inch version. The increased storage capacity of the 3½-inch disk makes that format the only choice for memory-hungry AppleWorks work-alikes like BusinessWorks. Both BusinessWorks and Quicken work with Apple's RAM card.

Dazzling Graphics

Software Publishing offers new ProDOS versions of **PFS:File**, **Report**, **Graph**, **Write**, and **Plan**, its integrated series of business-software programs. The company plans to begin shipping 3½-inch and 5½-inch disks this month. You'll buy both and return one to complete the product warranty. Users of the current 5½-inch Pascal editions of the PFS line can obtain 3½-inch ProDOS versions at nominal cost. PFS:Graph supports Apple's color ImageWriter II. All updated PFS programs can use the II RAM Expansion.

Broderbund's graphics program **Dazzle Draw** really will dazzle you
now—Broderbund says a new version
will print color pictures on the
ImageWriter II. The company suggests you store images on 3½-inch
disks and use a 5½-inch floppy for
the program itself.

All those StickyBears will soon stroll off your monitor and onto your paper. Weekly Reader is offering a new **StickyBear Printer** program for the ImageWriter II to complement its series of children's learning-skills programs. **Blazing Paddles**, drawing software from Baudville, and Mindscape's **ColorMe**, a children's graphics program, will support the ImageWriter II, as well.

A Challenge for Software Development

The 3½-inch disk looks as if it's here to stay. Color printing seems

only natural. Third-party software developers have a new standard to follow in expanded RAM. Apple's new peripherals are technologically exciting—but that's just the beginning. Apple has given program designers a new challenge—we'll watch them work their magic.

Editor's note: This special report was compiled and written by inCider staff members Wendy Lea McKibbin, Bob Ryan, Paul Statt, and Susan Gubernat. It is based on an early look at the Apple products mentioned herein and on information supplied to us by Apple and by third-party developers, and in no way constitutes an endorsement or product assessment. inCider will review the new products in upcoming issues.

A New Standard?

With the introduction of the II RAM Expansion Card, Apple has established a hardware standard for third-party software developers writing memory-intensive applications for the Apple II. I expect this will have a negative impact on sales of current memory-expansion boards for the Apple, such as Applied Engineering's Ramworks, Checkmate Technology's MultiRam, and Legend Industries' E' Card, that are incompatible with the II RAM Expansion Card. Third-party manufacturers introduced these boards to fulfill a demand that Apple, in its preoccupation with the Macintosh, had failed

In an upcoming issue, *inCider* will compare Apple's expansion card with the most popular third-party memory cards to help you select the board that best meets your needs. ☐ —R.R.

ANNOUNCING THE VILLY SOFTWARE SPECTACULAR.

BUY 3, GET 1 FREE.

CHOOSE FROM OVER 50 LEADING TITLES.

What do you call an offer that brings together, for the first time ever, five leading brands of home software?

The Family Software Spectacular!

And it's your opportunity to choose a free software program from the best titles on the market today. All you have to do is buy any combination of three titles from any participating brands during this special offer period. And we'll send you another one of your choice-free!

It's a one-of-a-kind value your family shouldn't miss.

FISHER-PRICE® A NAME YOU CAN TRUST.

For years Fisher-Price has been known for helping children develop skills as they play. With Fisher-Price™ Learning Software, your child can develop skills in five key areas: math, language, creativity, basic learning and computer literacy.

Your child will love developing and testing language skills with the help of PETER RABBIT READING, a program that uses voice to teach sound and letter recognition in words.

of all time.

They're great for kids, yet fun for all ages.

The full line also includes

FILE & REPORTand

that represent the best

SPREADSHEET-titles

Enjoy "THE WIZARD OF OZ.™" You are Dorothy, and each of your decisions determines your adventure. There's more than one adventure to be had as you meet old friends and new in the land of Oz.

WORK BETTER WITH BETTER WORKING.™

Constantly erasing and retyping? Unsure of your spelling? WORD PROCESSOR WITH SPELLCHECKER is exactly what you need. This full featured word processor includes the 50,000 word AMERICAN HERÎTAGE DICTIONARY™ spellchecker which detects over 99% of misspelled words.

SPINNAKER® THE LEADER IN FAMILY LEARNING SOFTWARE.

From pre-school counting to high-school compositions, Spinnaker offers the high quality educational programs you have come to expect. For example, there's the HOME-WORK HELPER™ series which provides step-by-step methods for improving writing and math skills and helps kids tackle otherwise troublesome school assignments.

TELARIUM.™ INTERACTIVE FICTION AT ITS BEST.

Here's graphic interactive fiction by famous writers of science fiction, fantasy, and mystery like Ray Bradbury, Arthur

C. Clarke and Erle Stanley Gardner. Each story unfolds with you in the center of the action—and completely in control. In PERRY MASON: THE CASE OF THE MANDARIN MURDER,™ you are the world famous criminal lawyer. Challenge the evidence. Cross-examine the witness. Only you can prove your client's innocence. And time is running out.

A SOFTWARE OFFER FOR ALL AGES.

Any software offer including something for everyone in the family is certainly fantastic. But combine that with a free product offer and what you have is something spectacular. Look for the specially marked boxes of The Family Software Spectacular at your retailer.

[SEE PREVIOUS PAGE]

HERE'S HOW YOUR FAMILY CAN PARTICIPATE IN

The Family Software Spectacular ™

REMEMBER, TO RECEIVE A FREE PRODUCT YOU MUST PURCHASE ANY THREE TITLES FROM THE PARTICIPATING BRANDS (IN ANY COMBINATION) AND MAIL YOUR ENTRY NO LATER THAN JANUARY 31, 1987.

- 1. Start by saving the receipt(s) from your software program purchases. (It is not necessary for software purchases to appear on one receipt. Photocopies of the receipt(s) are accepted. Receipts must be dated BETWEEN JULY 1, 1985, AND JANUARY 31, 1987.)
- 2. Cut the proof-of-purchase tab from each of the three user manuals that come with the programs. (Photocopies **not** accepted.)
- Attach the purchase receipt(s) and the three original proof-of-purchase tabs to one separate sheet of paper.
- 4. Fill in the form below and place the completed form in an envelope with:
 - a. A sheet of paper with three original proof-of-purchase tabs and your purchase receipt(s)
 - b. A check or money order for \$3.50 to cover postage and handling. (Canada residents please send \$5.00 for postage and handling.)

Make check payable to THE FAMILY SOFTWARE SPECTACULAR and mail envelope to:

THE FAMILY SOFTWARE SPECTACULAR

P.O. Box 1327, Cambridge, MA 02238

Grappler Graphics Relax! It's Easy

Whether you're looking for sunken treasure, or graphing your business sales, you must have effective graphics tools. And when it's time to print your results, you need to get what's on your screen off your screen. Enter the Grappler printer interface. Quick, easy and effective.

THE GRAPPLER IS YOUR HIDDEN TREASURE

We all know that a picture tells a thousand words, so your graphics are your most important printouts.

With the Grappler, graphics printing is a snap. A few quick and easy keystrokes, and your Hi-Res image is promptly reproduced on just about any printer you care to name. Depending on which keys you hit, your graphics can be

printed enlarged, enhanced, inverted, rotated, and ... well, the message here is flexibility.

A GRAPPLER DESIGNED FOR YOU

To date Orange Micro has sold over 255,000 Grapplers, so you know you're in experienced hands. There are Grapplers available for many popular micros, including parallel and serial models for the Apple IIe, a new version for the Apple IIc and an advanced Commodore 64 interface. Most Grapplers offer buffering or other valuable options. All come with the "Seldom Used 1 Year Warranty." There's a Grappler for virtually every application, so remember to ask for it by name when you purchase your printer interface. You'll be glad you did. Graphics printing has never been so easy.

1400 N. Lakeview Ave., Anaheim, CA 92807 • (714) 779-2772 • TELEX: 5101001014

disk drive and a back-up storage system, such as streaming tape. Next, the file server, a special-purpose computer that functions as a policeman, governs the flow of traffic and the use of shared peripherals, and an interconnect cable physically connects the computers together, often using intermediary electrical devices called "hubs." Then there are the personal computers themselves, each of which requires a special adapter card or printed circuit board installed so it can interact with the network. Last and most importantly is the software, which makes the sharing of data and resources possible.

For purposes of discussion and comparison, I will differentiate LANs along four basic lines: transmission techniques, topology, access methods, and sophistication in providing "extras" such as network management or protocol conversions to support internetworking.

The Anatomy of a LAN

Three media on the market today—twisted copper wire or twisted-pair, coaxial cable, and fiber optic—transmit data in local area networks. Twisted-pair, which is nothing more than common telephone wire, is the least expensive and the easiest to install. Coaxial cable, of which there are two types—broad band and baseband—is the next most expensive choice and requires professional installation. However, it provides better noise immunity than twisted-pair and has a wider variety of choices, such as the option of teflon coating to meet fire-code restrictions.

Fiber-optic cable is the newest medium on the market and the one with the highest price tag. While not yet cost-effective, fiber-optic cable is extremely durable and almost impossible to tap surreptitiously, thus giving it high marks for security. DataPro, a research firm in Delran, New Jersey, anticipates fiber optics will ultimately become the least expensive cable option due to the abundance of natural silicon and eventually, the more extensive use for telephone applications.

Today's networks use three topologies: the "bus," the "ring," and the "star." Topology is simply the network configuration—the way in which the nodes (junction points within the network) relate physically and logically to one another.

A prime example of the bus topology is AppleTalk, which originally bore the name "Apple Bus" before someone at Apple Computer decided the product would be more marketable with a "less technical" name. Personal computers in a bus configuration are arranged along a single line of cable extendable at one end (see the accompanying **Figure**). A variation on the bus topology is the "tree," in which the cable branches at one or both ends, although only one transmission path is available between any two nodes.

The ring is a circular arrangement wherein the signal passes from one personal computer to the other, until it has returned to the original station, thereby making a complete circle. The bus and the ring are the most widely used configurations in the United States.

A less common topology is the star arrangement. Here, a central station connects directly to each node and all signals must pass through the central system.

The third major element of a LAN, its access method, more than any other single factor determines the efficiency of a network. Access methods, the way in which a network controls traffic, fall into two general categories: random access and deterministic control. In a random-access or "contention" setting, each station can transmit at will, but first listens for traffic before sending out its signal. The most widely used type of random access is the Carrier Sense Multiple Access (CSMA) method. Occasionally, two stations using this access method send out signals simultaneously, so the signals collide. To counteract this weakness, you may install a Collision Detection (CSMA/CD) or Collision Avoidance (CSMA/CA) mechanism.

CSMA networks perform best when handling sporadic traffic and tend to degrade as the number of stations on the network increases, thus making the likelihood of a collision greater. CSMA performance also deteriorates as the physical length of the network increases, because it's more difficult for faraway stations to detect and avoid collisions.

By contrast, networks that use deterministic access methods can easily handle heavy, consistent traffic, and, depending on their type, may be able to support stations separated by sizable distances. The best example of this access method is "token passing"—a "token" or special bit pattern passed from station to station in an orderly fashion gives one station at a time the right to be master of the network.

The master sends out its traffic, then relinquishes control to a new governor by sending the control packet to the next node in line. Since each node has a unique address, the control can be passed sequentially from unit to unit. If the master hears no activity on the network within a certain amount of time, it then passes control to the unit with the next highest address.

The access methods discussed thus far address the two most basic network services, namely the physical layer and the data-link layer where messages are sent and acknowledged. Some vendors offer higher-level services as well, such as software-based network management and access to main-frames or other networks.

From Origin comes the long-awaited sequel to the award-winning

to the award-winning UltimaTM III Available on Apple®

Quest of the Avatar

A state-of-the-art fantasy roleplaying game of unprecedented magnitude by Lord British™.

repare yourself for a grand adventure: Ultima™ IV, sixteen times larger than Ultima III, is a milestone in computer gaming—one that challenges your physical and mental skills while testing the true fabric of your character.

Enter Britannia, kingdom of Lord British. Journey through terrain of infinite proportions, conversing with characters on hundreds of topics. Unravel the

mysteries of a superior magic system. At each turn beware of daemons, dragons and long-dead wizards haunting the most tranquil of places. Encounters with parties of mixed enemy types test your strategic abilities. Shrewd use of terrain can lead to victory against seemingly impossible odds.

Survive this multi-quest fantasy, then begin the final conflict, your quest of the Avatar. The ultimate challenge—the self—awaits....

Choices for the Apple User

Three local area network products—the Nestar PLAN Series, the Corvus Omninet, and the Sunol Sun Net—are currently available for Apple II and /// computers. Still to come is the long-awaited adapter card for the Apple II that will give it a place on AppleTalk—an event company sources say will happen at least by July 1986, if not by January. Finally, a product called "TOPS" from the little-known Centram Systems in Berkeley, California, will soon be compatible with the II series.

The Nestar LAN is the most expensive system of the ones mentioned above, but also the one that allows for the most personal computers per network and the longest distances between workstations, according to systems specialist Scott Haugdahl of Architecture Technology Corporation in Minneapolis. Haugdahl notes that the Nestar LAN allows for up to four miles (22,000 feet) between PCs, as compared to competitive brands' 1000 to 4000 feet for the entire network. The network has a tree topology and can transmit data at the rate of 2.5 megabits per second. Furthermore, both the PLAN 3000 and 4000 file servers can support a maximum capacity of 255 stations, although typically the PLAN 4000

supports from ten to 100 users and the PLAN 3000 from five to 15 systems. Both file servers support Apple II's and ///'s and the IBM PC and compatibles. An Apple on a Nestar LAN can function as a workstation, terminal, or printer server.

A single PLAN 4000 file server costs \$24,000, provides 548 megabytes of storage, and has a built-in (45–60 megabyte) streaming-tape back-up unit. Storage capacity has no ceiling, however, since the LAN can support multiple file servers. The PLAN 3000 file server, priced at \$15,000, includes the same tape back-up features and up to 56 megabytes (formatted) of storage space. Both file servers support DOS, Apple Pascal, and CP/M for the Apple II; SOS for the Apple ///; and all versions of PC DOS and UCSD p-system for the IBM PC group of products.

The Nestar LAN is well-suited (though not confined) to the Fortune-500 market because of its compatibility with the IBM mainframe world, its high-quality file servers, its durable and costly coaxial and fiber-optic cable, and its offering of higher-level services. For example, to communicate with other networks and with IBM and IBM-compatible mainframes,

Figure. An example of a bus topology, the most common topology in LANs.

Membership Kil

the Nestar LAN supports asynchronous, bisynchronous, and SDLC (SNA) protocols. The important point to keep in mind is that Nestar does not position itself as an Apple LAN vendor, but merely provides that compatibility for its IBM customers.

Both Nestar and Corvus provide Apple owners with LANs capable of communicating with the corporate mainframe. Sunol does not.

The Leader in Education

Apple and Corvus individually and collectively lead the field in education (see the sidebar "Networking in Education" accompanying this article). And, more often than not, they team up in the classroom. For example, a survey conducted by the UNICOM Software Development Group found that 95 percent of the Corvus networks in education use Apple computers. The list of educational institutions using Omninet is extensive, and includes entire school districts like the Indianapolis Public School System and all schools in West Virginia, as well as prominent universities such as Stanford, Yale, and MIT.

Like Apple, Corvus caters to the special needs of the educational buyer, including the often stringent budgetary requirements that surround public money. The company offers its customers in education a

LANs Glossary

Contention Setting (Random Access)

A condition in a network in which two or more locations try to transmit on a multiplex channel at the same time. If the channel is not free, the requesting terminal has to queue (wait in line for the attention of the processor). The queue is solved either on a first-come, first-served basis or on a prearranged sequence. Smaller networks with less travel distance over the network mainly use this setting.

Deterministic Access

In a network using this method, you set up protocols in advance that easily handle a large number of stations and transmissions by using "token passing."

Disk Server

A programmable device that enables multiple users to share the same hard disk. It remains under the control of the computer's operating system and has a restricted command list. Disk servers *physically* divide a hard disk into partitions or volumes so that each user has his or her own hard disk or shared workspace. As a tool for the client computer, a disk server requires a printer server in order to handle printing traffic.

Fiber-Optic Cable

A transmission cable using small-diameter glass fibers through which light is transmitted. Modulating this light transfers information, and light-sensitive semiconductor devices detect these modulated signals.

File Server

In a network, a file server is an intelligent, highly sophisticated device that provides high-level services. A software shell over the DOS creates subdirectories of workspace on a hard disk. The user gains access to the network by individual files. The file server on a LAN is in control because the server software controls file allocation and can handle *all* print traffic.

Hubs

An electrical socket in a plugboard into which you can insert leads or plug wires.

Multiplexing

The concurrent transmission of more than one signal at the same time over a single route or channel in a network.

Node

A junction point within a network.

Protocol

Hardware and software interfaces within a computer that let the computer transmit over a communication network and collectively form a communication language.

Protocol Conversions

Specific sequences of signals in data exchange that ensure that the two communicating devices can recognize each other's signals and that the transmitted and received information is not "garbage." Protocol determines the pattern flow data bits will follow and how devices on the network will cooperate in their communication. Protocols in networks also verify that the user has authority to use the network.

Quadplexer

A device in a network that combines two or more signals (as in multiplex) into one high-speed data stream for transmission on a single channel.

Token

A discernible unit in a sequence of characters. Tokens are used to transfer control of the network bus from one node to another.

—Dawn Matthews inCider staff

Networking in Education

If Marie Sikora had known what she was getting into when she volunteered to set up a computer laboratory for 750 elementaryschool children, she might have run "very fast in the opposite direction."

"I had many sleepless nights three years ago, when I was trying to learn about hard-disk technology and figure out how to make the network software function properly," says Sikora, the Computer Laboratory Resource Teacher at Bachrodt Elementary School in San Jose, California. "I didn't find Corvus that easy to learn."

She ultimately found her answers by seeking out higher-level technical resources within the school district, and today she's a satisfied veteran. Sikora found that networking avoids the problem of having small children handle the floppy disks. And, after three years of pounding by enthusiastic fingers, the computers are still intact, too, and functioning perfectly.

The school uses its 25 Apple II computers linked together with Omninet to provide drill and practice in math, reading, and language. Students aged 5 through 12 visit the lab twice a week to reinforce skills taught in the classroom, says Sikora. The lab uses software from the Minnesota Education Consortium, Sunburst, Random House, Soft Swap, and a number of other vendors. The entire setup represents a \$15,000 investment, although the prices of Corvus and Apple have dropped since the school purchased its equipment.

Sikora reports that the children like the informality of the computer and the fact that it is non-judgmental. "They do far more drill and practice at the keyboard than they would with pen and paper," she notes.

A Southern Leader

Ninety miles from New Orleans in Harrison County, Mississippi,

5000 high-school and secondary-school students exhibit a similar enthusiasm for computer-assisted instruction. The school district has installed 339 Apple II's at its ten schools in networks of seven to 46 systems. The equipment is part of a program to develop computer-literacy skills in every student in the district, says school district superintendent Henry Arledge.

Arledge maintains that Harrison County is one of the leading school districts in the Deep South for computer-literacy training—a claim supported by the size of its installation and the daily exposure to computing offered to each child. Last year, the Apple-Corvus networks were used for mathematics training, and each student was required to spend 20 minutes a day, five days a week, at the keyboard. In the 1985-1986 school year, the district will expand the program to include reading training. Other plans for the new school year include a greater effort to "correlate textbook and software objectives," Arledge says. He explains that the school district is also developing its own software, so that eventually the entire school system can be networked to the main office.

Although the networks have been in place only since 1984, Arledge says there have already been tangible results. For example, one eighth-grade class that used the systems for mathematics drill and practice scored at the tenth-grade level on a state competency test. The LAN-based activities also represent a significant savings of the teachers' time, since teacher's aides can oversee the laboratory activities, thus freeing the instructors for other tasks.

It's not hard to push technology on the kids, Arledge says. It's hard to keep them out of the computer rooms. "All in all, we think it's the best money we ever spent."

wide range of support services through its dealer network, such as on-site service agreements, extended warranties, and product-exchange agreements. For a price, teachers can obtain additional support and in-service training from their local dealer.

Perhaps the most attractive feature about the Corvus network, as far as educators are concerned, is its cost-effectiveness. An educator discount of up to 33 percent is available for purchases of \$50,000 or more, although a generous 25 percent discount is offered for purchases exceeding \$1000. The educator's price list shows an 11-megabyte OmniDrive Starter Kit costing \$1995, the Printer Server priced at \$990, and The Bank storage unit at \$2195. School superintendent Henry Arledge of Harrison County, Mississippi, calls it "the best buy on the market."

An attraction that runs a close second to cost is the large selection of software that runs on the network. For example, *Swift's Educational Software Directory for Corvus Networks* lists more than 800 network-compatible software products. *The Networker*, the quarterly publication by Corvus' National Educational End User's Group at San Juan College, Farmington, New Mexico, publishes additional Omninet-compatible software listings.

The Corvus installed base is by no means confined to education, but includes a large business following, particularly since it can support SNA gateways to the mainframe environment. Among its business-based customers are Bank of America, Bloomingdale's, Citibank, Chase Manhattan, Dean Witter Reynolds, Hannover Insurance, Holiday Inn, and Merrill Lynch.

A Simple, Modular Network

Omninet is a twisted-pair, CSMA/CA bus network that can extend up to 4000 feet. Because the network uses twisted-pair wire and snap-together tap boxes, the company claims it's "as easy to install as a stereo system." Corvus reports that the average business network supports from five to ten computers, and the typical educational network supports from 12 to 15 systems, although technically Omninet can support up to 60 personal computers per network or 64 network nodes (computers plus peripherals). Omninet supports the Apple II's and ///'s, the Macintosh, the IBM PC and several of its compatibles, the Corvus Concept, the DEC Rainbow, the TI Professional, and the Zenith 100 and 150.

For mass storage, Corvus offers the OmniDrive Winchester Disk with up to 126 megabytes of storage. Omninet can handle a maximum of eight OmniDrives per network to provide a total of 1000 megabytes or 500,000 text pages of mass storage per single installation. For back-up, there's The Bank, a 200-megabyte random-access device with

removable tape cartridges, and The Mirror, a low-cost alternative to The Bank that interfaces to a video cassette recorder. The Mirror can provide 73 megabytes of storage per two-hour video cassette.

Corvus addresses the issue of disk access with a built-in disk server in OmniDrive, instead of a separate file-server unit. The disk server manages user requests to load, save, or read programs and to use the printer.

The Corvus Printer Server picks up print requests from the disk server and holds them until the printer is ready. The Printer Server can direct the activities of up to three printers at one time, thus eliminating the need to have a dedicated personal computer to handle this task.

The "Sun Net" Solution

The third networking alternative on the market for Apple II and /// owners is the Sun Net LAN from Sunol Systems in Pleasanton, California. Sunol, one of the first companies to market an alternative file server and network for the Macintosh, provides an economical flat-ribbon cable network that can support II's and ///'s and almost 20 other microcomputers.

The Sun Net LAN supports ProDOS, DOS 3.3, CP/M, and Pascal 1.2 for the Apple and a variety of other operating systems for the IBM PC and compatibles. At the heart of the system is the Sun*Disk Universal Networking Mass Storage System, which acts as a disk server and can be linked to up to five quadplexers to support a maximum of 16 users per network. However, you can also network Sun Net to other LANs, including AppleTalk, IBM PC Net, Ethernet, and PC Net from Orchid Technology, so they can simultaneously share the same Sunol disk drive.

The Sun*Disk is available in formatted usable storage capacities of 10, 16, 25, 44, 68, 92, and 110 megabytes, and can be purchased with the Sun*Safe option, a built-in, integral, random-access back-up tape drive. You can achieve maximum storage capacity by linking four drives together. The Sun*Disk with tape back-up starts at \$3345 for the 10-megabyte model and reaches as high as \$8345 for the 110-megabyte unit.

More Options on the Way

Centram Systems West, a start-up company in Berkeley, California, will be marketing TOPS, the Transcendental Network, through computer stores by the end of the year. The network is 100 percent compatible with AppleTalk Personal Network protocols and cabling. Company president Nat Goldhaber explains that the CSMA/CA network has a distributed-server architecture that can turn any computer on the network (that has a hard disk) into both a server device and a workstation. Thus TOPS will en-

For the past year many have tried to build a better RamWorks.

It's finally happened.

Meet RamWorks IITM

An Impressive New Version of a Most Impressive Expansion Card.

RamWorks II. A Generation Ahead. Again.

The best selling expansion card for the Apple IIe just got even better. With RamWorks II, expand your IIe to an incredible 3 megabytes of usable RAM.

Turbo Charged AppleWorks.

RamWorks II plugs into the IIe auxiliary slot and acts just like Apple's extended 80 column card, only better—because if you buy a 256K or larger card, AppleWorks will automatically load itself into RamWorks II. This dramatically increases AppleWorks' speed and power because it effectively eliminates the time required to access disk drive 1. Now, switch from word processing to spreadsheet to database management at the speed of light. AppleWorks responds the moment your fingers touch the keyboard.

But AppleWorks has certain internal limits, independent of available memory. Fear not. Only RamWorks II (and the original RamWorks of course) removes those limits. Only RamWorks II increases

the maximum number of records available from 1,350 to over 16,000. Only RamWorks II actually increases the number of lines permitted in the word processing mode. And only RamWorks II features a built-in printer buffer, so you no longer have to wait for your printer to stop before going back to AppleWorks (256K or larger RamWorks II required).

With RamWorks II, you won't have to split your data into 2 or more separate files because you'll have the necessary memory to access ALL your data ALL the time, quickly and conveniently.

	AppleWorks
RamWorks II	Desktop
128K	101K
256K	183K
512K	367K
1 MEG	736K
1.5 MEG	1104K
3 MEG	2205K

The Most Friendly, Most Expandable Card Available.

RamWorks II is compatible with more off-the-shelf software than any other RAM card. Popular programs like Advanced VisiCalc, Magic Office System, Flashcalc, The Spread Sheet, Diversi-DOS, Supercalc 3A, Magicalc, etc. (and hardware add-ons like Profile and Sider hard disks). Fact is, only RamWorks is 100% compatible with all software written for the Apple 80 column and extended 80 column cards. In addition, RamWorks II can emulate most other RAM cards, so you can use programs written for them without modification. And any size RamWorks II can be user upgraded later to any larger size.

RamWorks II was designed so you could take full advantage of future developments in 16 and 32 bit microprocessors. As your needs grow, so can RamWorks II. A handy coprocessor connector allows the latest and greatest coprocessor cards to access all 3 MEG

of RamWorks II memory. And speaking of more memory, RamWorks II has a memory expansion connector on board so a low profile (no slot 1 interference) memory expansion card can add another 512K or 2 MEG of memory.

Should you ever run low on memory with RamWorks II (unlikely) you can add these expander cards to your RamWorks II at any time. And of course, these expander cards are compatible with original RamWorks too.

It's In Color.

The same slot that's used for memory expansion is also the slot that's used for RGB color display. RamWorks II lets you decide later to add RGB color. For only \$129, an RGB option can be added to RamWorks II to give you double high resolution color graphics and 80 column text. All with razor sharp, vivid brilliance that's unsurpassed in the industry. The RGB option does not waste another valuable slot, but rather plugs into the back of RamWorks II with no slot 1 interference (works on the original RamWorks, too) and attaches to any Apple compatible monitor. And remember. You can order the RGB

It's Got It All.

- 15 Day Money Back Guarantee
- Super sharp 80 column text (patent pending) with or without RGB option
- Double high resolution graphics (with or without RGB option)
- Expandable up to 1 Meg (1024K) on main board
- RAMDRIVE[™] software available, compatible with Applesoft, PRO-DOS, DOS 3.3, PASCAL and CP/M (\$29.00)
- Compatible RGB option
- · Built-in self diagnostics software
- No slot 1 interference
- Lowest power consumption (patent pending)
- · Takes only one slot
- Software industry standard
- Advanced Computer Aided Design
- Used by Apple Computer, Steve Wozniak and virtually all software companies
- 5 vear no hassle warranty

RamWorks II with 64K	\$ 179
RamWorks II with 128K	\$ 219
RamWorks II with 256K	\$ 249
RamWorks II with 512K	\$ 319
RamWorks II with 1 MEG	\$ 519

RamWorks II with 3 MEG	\$1699
RGB Option	
(can be added later)	\$ 129

RamWorks II. Like the original, it's rather extraordinary. But then some things never change.

ORDER YOUR RamWorks II TODAY. (9 a.m. to 11 p.m. 7 Days, or send check or money order to Applied Engineering.

MasterCard, Visa and C.O.D. welcome. Texas Residents add 51/8% sales tax. Add \$10.00 outside U.S.A.)

coon with your RamWorks II. Or add it in an a later date.

It Corrects Mistakes.

Let's say you bought some other RAM card (and that's a mistake) and your RAM card is not being recognized by AppleWorks, Advanced Visicalc, Flashcalc, Supercalc 3A, or other programs, and you want RamWorks II.

- Expandable to 3 Meg (3072K) with expander (piggyback) card
- Can use 64K or 256K RAMS in any combination
- Linear addressing coprocessor port
- Automatic AppleWorks expansion up to 2205K desktop
- Accelerates AppleWorks
- Built-in AppleWorks printer buffer
- The only large RAM card that's 100% compatible with all He software

P.O. Box 798, Carrollton, TX 75006 (214) 241-6060 Continued from p. 26.

able an Apple II with an external hard drive, a Macintosh installed with Hyperdrive, or an IBM AT (or all three) to work as the network's file server.

The other distinctive feature about TOPS is its interoperating system capabilities. A user can access files on dissimilar systems without closing out the file he or she is currently working on. And, the user can use the accessed files as if they were internal to his or her own machine.

For example, a Macintosh user running Lotus Development Corporation's Jazz can use files created by Lotus 1-2-3 on a remote IBM XT. Goldhaber explains that the TOPS software translates the requests of a given operating system into generic requests it recognizes on remote target machines.

At the moment, TOPS is targeted for the Macintosh, IBM PC, and compatibles, and for CP/M 80, UNIX, and other operating systems. Although in its current form the product doesn't support the Apple II series, Goldhaber says this will change by the end of the year, even if Centram has to develop its own adapter card.

TOPS and AppleTalk could be available for the Apple II at roughly the same time, thus opening up some extremely cost-effective solutions to networking the Apple.

A Rule of Thumb for Shopping

It's difficult to compare LAN costs because storage and performance factors vary considerably from vendor to vendor. Furthermore, the cost per worksta-

tion of tapping into an existing LAN is quite unlike the cost per workstation of installing a new LAN, which may incur "hidden costs" such as cabling, technical training, and software modification. And, as the market develops, costs tend to drop, thus adding a new twist to pricing estimates.

Some rules of thumb, however, still apply to the LAN market. In general, you can expect to pay more for the products with the greatest speed and performance capabilities and the highest level of network services. Thus, a network with vertical compatibility that communicates with an IBM mainframe is likely to be more costly than a simple, flat-ribboncable LAN that can talk only to other personal computers.

It's also a safe bet that customized systems and software will have a higher price tag than off-the-shelf products. The newer the technology, the more it will cost to use. A good example of this is fiber-optic cable, which is considerably more expensive than the widely used twisted-pair wiring.

There's a bright side to the task of shopping for a local area network, if you use an Apple II or Apple III system. Unlike the hapless IBM PC user who has a score of products to wade through and evaluate, the II operator has a fairly limited selection to choose from, hence a simpler job—at least for the moment. A new marketing emphasis by Apple on the II series, should it appear, and AppleTalk compatibility may expand the networking horizons for Apple II owners in the future.

BACKTALK

The Classroom Computer Battle

"Computer literacy" is one of the latest buzzwords circulating through academic corridors. People bandy the term without batting an eyelash—and without knowing what it really means.

Two philosophies of computer literacy exist. Some maintain that computer literacy involves teaching the theory, application, and mechanics of the technology: binary data, memory capacity, architecture, input, output. Others equate the term with implementing the technology to teach course curricula and improve reading and writing skills.

Advancing the Technology

According to this school of thought, improving computer technology supersedes all other applications. The processes that make a computer

"think" constitute the content of course instruction. Students fill their notebooks with flow charts, binary code, and technical terminology.

Advocates believe it's important to teach computer theory and advance the principles of the technology.

For the Sake of Learning

Members of the other camp, followers of computer-aided instruction, see the computer as a teaching tool—like the blackboard or television set—used to promote learning among students. Teachers use the computer to help convey concepts in courses such as math, science, English, and social studies. The applications are limitless, given the creative possibilities the computer provides. Computer literacy, to these people, means using the

computer to teach students how to think better.

It's Your Turn

How do you define computer literacy? Let us know. Use your modem and call our bulletin-board system at (603) 924-9801, to answer our survey on computer literacy. The procedure is easy. Once on the BBS, you'll see a menu of supported commands. Type in POLL after the command prompt and the survey will appear.

If you don't have a modem, simply complete the questionnaire below and mail it to BackTalk, *inCider*, 80 Pine Street, Peterborough, NH 03458.

Please send us your responses—by modem or mail—before November 15, 1985. We'll publish the results in the January 1986 issue. ■

1)	Do	you	think	chile	dren	should
			nputei			

- a) yes
- b) no

2) Are you a (check all that apply):

- a) teacher
- b) student
- c) parent

3) If you think children should use computers in school, what applications should be taught (check all that apply)?

- a) hands-on applications (such as word processing and simple data-base use)
- b) programming courses
- c) computer-aided instruction in daily academic subjects

4) Why do you think it's important for children to learn about computers in school?

- a) to provide the training ground needed to advance the nation's computer technology
- b) to help develop and refine students' thinking skills
- c) to introduce students to basic computer theory and prepare them for future jobs

5) Computers in the classroom:

- a) can never take the place of teachers
- b) enhance children's educational experience
- c) threaten the structure of the American educational system
- 6) Do you think there are any negative aspects of having computers in the classroom?
 - a) yes
 - b) no

7)	lf	yes,	do	you	think	comp	oute	•
	wi			-	***		. '	

- a) decrease student-teacher interac-
- b) stifle students' creative thought
- c) encourage students to break into the national security system
- 8) I define computer literacy as . . .

SOFTWARE THAT DOES IT ALL.

BACKTALK

Honor Among Thieves

People are talking. ...about software piracy. A few months ago, we asked what you thought about software piracy—copying copyright-protected programs. (See BackTalk, September 1985, p. 42.) The topic hit home—and the software library—for many of you, and provoked some interesting comments. Not to mention that a few of you proud, defiant souls noted that you sent your survey responses on pirated word-processing programs.

Of those responding to the survey, 58 percent indicated that they thought software piracy is an acceptable practice. The reason: Software is too expensive.

"Prices for software packages these days are ridiculous. I'd gladly buy 'legal' copies of software from manufacturers if they were closer to the \$10 to \$15 range. Software companies need to realize that they are no longer selling their products to the rich. Today, the middle class can afford computers but still can't afford the software."

"As a software pirate, I see nothing wrong with piracy at all. Sure, there are moral implications, but software companies harbor a feeling of distrust toward the consumer. Pirates resent that. My friends and I aren't into pirating for profit; we're defying the establishment and bringing attention to a problem."

Closing In

Although our survey gives pirates the upperhand, they shouldn't get too comfortable. Forty-one percent don't condone piracy.

"It's unfortunate, but there are far too many businessmen whose integrity falls far below that of an alley cat in heat."

"Anyone who doesn't understand that software piracy is the theft of intellectual property is mentally deficient. Those who understand but choose to commit this criminal act are common thieves."

"Would you steal a Porsche because it's too expensive, and you can't afford it? The only reasons pirates do what they do is because they think they can't be caught."

"A pirate doesn't have to be brave or strong. He can copy disks in the quiet of his own home with relatively little chance of being caught. It's like the drug addict shooting up in his own kitchen. He doesn't care what damage he does, he just does it."

"There is no difference between piracy and stealing. I can't see any difference between piracy and an employee of mine walking out with a tape—a potential sale has been lost!"

But Then Again. . .

Despite a vocal minority condemning software piracy, 68 percent of the respondents admitted that they owned illegal copies of copyrighted programs. Most made the copies themselves or received them from friends at no charge. And the majority (64 percent) said they have never refused to buy a program because it was copyprotected.

As many survey participants remarked, software piracy isn't a black-and-white issue. The gray areas leave room for those swaying between the extremes.

"I don't think programs should be copied except for back-up purposes. At school, however, the budget prevents buying separate programs for each computer. We have no choice but to copy."

Keep in mind that one study can't provide the detailed investigation required for in-depth research. But what it does offer is an idea of what you think about the topic: Software piracy (a.k.a. copying copyright-protected programs) is acceptable when done for your own use and not for profit. ■

MANAGING YOUR MONEY^{*} IS NOW AVAILABLE ON APPLE IIE AND IIC.

Special Introductory Edition!

Contains both 5¼" and new 3½" UniDisk 3.5° disk formats

APPLE IIe, IIc (128K, 80-Column Monitor, Two Drives)

PASCAL PRIMER

Facts on Filer: Part 1

by Tom Swan

Apple Pascal is more than a programming language—it's a programmer's toolbox, complete with editor, linker, assembler, and Pascal compiler. In this four-part series, I'll take a close look at one of Apple Pascal's most useful tools, the Filer.

The Filer is a special program for manipulating files such as SYSTEM .WRK.TEXT, or peripherals like PRINTER: and CONSOLE:. For example, the Filer transfers, removes, examines, and changes files. It also lists directories, verifies disk blocks, and investigates the peripheral devices in your computer. **Table 1** lists the Filer commands I'll cover this month.

Starting the Filer

To start the Filer, type F from the main Pascal command line. The screen will display one of the menus shown in the **Figure**, depending on whether or not you have an 80-column display. (The top menu is for an 80-column display; the abbreviated menu below it is the normal display.) To switch from one display to the other, follow the instructions in the accompanying sidebar.

File Names

An Apple Pascal file name has three parts—volume, name, and extension. *Volume* tells you the file's location, *name* identifies it, and *extension* indicates the file's contents. An example of a complete file name is APPLE1:MYPROG.TEXT—the volume is APPLE1:, the name MYPROG, and the extension .TEXT.

Volume names, up to seven characters long, end in colons and refer to peripheral devices. For example, APPLE1: and APPLE2: are the volume names of those disks (also referred to as units 4 and 5). To use the unit numbers in a volume specification, precede them with a number sign: Volume #6: is just another way of writing PRINTER:.

One useful tool of the Pascal trade, the Filer, helps you manipulate your files and peripherals.

Extensions begin with periods, and are usually four characters long. Examples include .TEXT for text files, .DATA for data files, and .CODE for program code files. You can also have shorter or longer extensions, as in SYSTEM.LIBRARY and NEW .MISCINFO, or none at all.

File and volume names must begin with a letter, but can contain digits and punctuation. Together with its extension, a file name may not exceed 15 characters. Adding a volume specification and colon makes 23 characters, the maximum file-name length.

Block Versus Character Devices

Some volumes, such as PRINTER: and CONSOLE:, are character devices—they handle input and output one character at a time. Others, like

Table 1. Filer commands covered in this month's column.

General-Purpose Commands

C(hange

Changes file or volume name

R(emove Ren

T(ransfer

Removes a file Transfers file or copies blocks

2.00.

System Commands

D(ate P(refix Q(uit Sets the system date Changes default disk drive Returns to command level disk drives #4: and #5:, are blockstructured—they handle input and output one block, usually 512 bytes, at a time.

The Filer sometimes expects you to specify a character device, and at other times, a block-structured volume. If, for example, you try to list a directory of the PRINTER:, you'll see the following error message indicating that only blocked volumes have directories:

Unblkv vol, File/(blkd vol) expected

Wild Cards

By inserting wild-card characters into file names, you can operate on

Figure. Although this figure shows both parts of the Filer's menu line, you'll see only one at a time on your display. Type? to switch from one line to the other. To select a command, type its first letter. The number in brackets shows the Apple Pascal version number.

Filer: G(et, S(ave, W(hat, N(ew, L(dir, R(em, C(hng, T(rans, D(ata, Q(uit [1.2]

Filer: B(ad-blks, E(xt-dir, K(rnch, M(ake, P(refix, V(ols, X(amine, Z(ero [1.2]

Filer: G, S, N, L, R, C, T, D, Q [1.2] Filer: W, B, E, K, M, P, V, X, Z [1.2]

all files sharing common volumes, names, or extensions. **Table 2** explains the five wild-card characters the Filer understands.

As an example of the use of wild cards, start the Filer, then put disk APPLE3: into any drive. Type T to select the T(ransfer operation, then duplicate the following dialogue:

Transfer what file? APPLE3:?.TEXT To where? CONSOLE:

Let's company to the story of t

An Apple IIc

he Apple IIc on the right works exactly the same as the Apple IIc on the left. Almost. The Apple on the right has a powerful memory expansion coprocessing card called Z-RAM. From Applied Engineering. Which means the Apple on the : the can completely load AppleWorks into RAM—and then run it up to thirty times faster than the Apple on the left.

Z-RAM also acts as a solid-state disk drive. Which means the Apple on the right will load and store programs up to 30 times faster. And, our included RAM disk is compatible with Applesoft, PRO-DOS, DOS 3.3, PASCAL and CP/M.

Turbo Charged AppleWorks.

Even a 256K Z-RAM can completely load AppleWorks TTO RAM. With Z-RAM, the moment your fingers touch the keyboard AppleWorks responds. A 256K Z-RAM lets your IIc run AppleWorks up to 30 times faster, increases available desktop to 229K and maximum number of records from 1,350 to over 16,000, doubles the number of lines allowed in the word processor, provides a print spooler, and autosegments large files so they can be saved on two or more disks. A 512K Z-RAM boosts AppleWorks desktop to an incredible 413K.

Take a closer look.

There's more. Z-RAM has a built-in high speed Z-80B microprocessor that allows you to run CP/M programs. Which means you now have access to the single largest body of software in existence, including popular packages like WordStar, dBase II, Turbo PASCAL and Microsoft BASIC.

And still more. Z-RAM is compatible with all IIc software and hardware, installs easily in just ten minutes with a screwdriver (slightly longer without), is available with 256K or 512K of additional memory (a 256K Z-RAM can be upgraded to 512K at

An Apple IIc with Z-RAM

any time). Z-RAM is easily handled by the IIc power supply with our patent pending power saving design.

The only thing better than that would be a recommendation from Steve Wozniak.

"I recommend Applied Engineering products wholeheartedly." (Of course, Steve's IIc bas a Z-RAM installed.)

> Steve Wozniak, the creator of Apple Computer.

For fast response.

Z-RAM comes complete with simple instructions, RAM disk software, Z-80 operating system, CP/M manual. And a five year "hassle free" warranty. Make a good Apple great. With 256K Z-RAM (\$399); or with 512K (\$479).

If you want to run CP/M software, but don't need more memory, we suggest our Z-80c card. The Z-80c has no memory expansion ports and is priced at only \$159.

IS YOUR APPLE II WORD PROCESSOR LETTING YOU DOWN? STEP UP TO GUTENBERG® SR

IF YOU NEED...

customized screen fonts – to display up to 115 extra user-defined characters on the screen and print them as special 7×12 dot graphics in your text, automatically.

downloaded printer fonts – to dynamically change the printer's character set. Gutenberg supports font downloading into the Apple Imagewriter or DMP of up to 21 different fonts at 14 print pitches in proportional print mode and still micro-justifies the print line.

special alphabets – to print text in many different languages, including: Danish, Finnish, French, German, Greek, Hebrew, Italian, Polish, Russian, Spanish, Swedish, Syriac, Ukrainian, etc.

scientific symbols – for any type of technical writing.

graphic pictures – embedded in your text, banner headings for newsletters or letterheads, or big display lettering.

flexible print layouts – for best reproduction of your document. Gutenberg's advanced formatting language allows unrestricted placement of text.

GUTENBERG® SR IS THE ANSWER!

Gutenberg runs on all Apple // computers or compatibles with 64K of memory. Gutenberg supports the Apple Imagewriter and Apple DMP with printer font downloading, the C.Itoh Prowriter, the NEC 8023, all Epson MX-100 compatibles with regular graphics, and most letter-quality printers without the graphics option.

PASCAL PRIMER

Table 2. Wild-card characters.

Wild Card Description

The current root volume. usually the boot disk. If you booted with APPLE1:, the file name *SYSTEM.LI-BRARY locates the library file on that volume. The prefixed volume as set by the P(refix command. If you set the prefix to APPLE3:, you can use the file name :TEST.TEXT rather than APPLE3:TEST.TEXT. Matches any character(s) here. The file name #5: = .TEXT means "all volume #5: files ending in .TEXT.' Matches any character(s) here and prompts before completing the operation. If you enter #4:?.CODE to delete files, the Filer prompts you before it deletes each .CODE file on volume #4:. Uses the same name for the destination file as the source. If you're transferring files, typing #4: = .TEXT, #5:\$ means "transfer all .TEXT files from volume #4: to volume #5: and give them all the same names and exten-

The question mark in APPLE3:? .TEXT indicates your intention to display all APPLE3: files ending in .TEXT. It also tells the Filer to prompt you before each transfer. To each of those prompts, press the Y key to view a file, the N or return key to proceed to the next one, or the escape key to cancel the transfer command and return to the Filer menu. Control-S starts and stops scrolling.

sions."

Source and Destination Files

The T(ransfer and C(hange commands require two file names—a source and a destination. If you enter the source alone, the Filer asks for the destination. Or, you can enter both at the same time. To see an example, type T; then at the prompt, type APPLE3: = .TEXT,PRINTER: to transfer all .TEXT files on volume APPLE3: to your printer (assuming you have one). Use a question mark instead of an equals sign if you want the Filer to prompt you before transferring.

When both the source and destination are disk files, if one has a wildcard character, then so must the other. If you want to change all volume #5: files ending in .TEXT to .BACK, for instance, type C and then answer the prompts as follows:

Change what file? = .TEXT Change to what? = .BACK

If you forget the equals sign in the destination file, the Filer gives you the error:

Bad form (Wild <to> Non-Wild) card

Now, if you've been following along, use the same method to change all .BACK files back to .TEXT.

The Filer Commands

In the descriptions that follow, <file> means any file specification, which might include a volume, name, and extension; <vol> means any volume alone; and a vertical bar | means "or."

If you get into trouble while using a command, pressing the escape and return keys should bring you back to the Filer menu. Avoid pressing control-reset; because many commands affect the disk directory, interrupting an operation by resetting can easily destroy all data on a disk.

C(hange

Type C to change file or disk-volume names. Type in the old name, press the return key, then type the new name. Or, type both names separated by a comma, as the format below shows:

< old-file > , < new-file >
 < old-vol > , < new-vol >

If the change succeeds, you'll see the message:

<old-name> --> < new-name>

To rename a volume, enter new and old volume names ending in colons. The formatter program gives newly formatted disks the name BLANK:, so you should always change these names. To do that, type C and enter BLANK:, MYDISK: at the prompt.

Never insert two disk volumes of the same name at the same time. The Filer might mix the two directories and destroy data in files. If you ever receive the message "Warning units 4 & 5 have the same name," immediately change one of the duplicate volume names to something else.

R(emove

The R(emove command removes a specified file < file > from a disk directory. The Filer shows you all af-

fected files before actually removing them. If you enter the specification = .TEXT, you might see the following

APPLE2:MYPROG.TEXT --> removed APPLE2:DEMO.TEXT --> removed APPLE2:TESTS.TEXT --> removed Update directory?

Answer Y to remove the named files permanently. Pressing the N, return, or escape key cancels the removal and makes no changes in the disk directory.

If you want the Filer to prompt you before each removal, use a questionmark wild card. If you enter *?.CODE to remove code files on the root volume, for example, you can answer Y or N to the Filer prompts:

Remove APPLE0:TEST.CODE ? Y Remove APPLE0:SYSTEM.WRK.CODE ? N Update directory?

If you answer Y, the Filer removes TEST.CODE, but leaves SYSTEM.WRK .CODE undisturbed-a recommended practice. Directly removing work file SYSTEM.WRK.TEXT or SYSTEM.WRK .CODE mildly confuses Apple Pascal. Instead, use the N(ew command to clear old work files.

T(ransfer

Type T to transfer either files or entire volumes from one location to another.

< file-source > , < file-destination > <vol-source>, <vol-destination>

Use a dollar-sign wild card to give the destination file the same name as the source. For example, to transfer the graphics demo program from APPLE3: to your boot disk, enter:

APPLE3:GRAPHDEMO.CODE, *\$

By specifying volume names or numbers, you can also copy entire disks. Format the destination disk before transferring. To copy APPLE2: to a blank disk in volume #5:, enter APPLE2:, #5: at the prompt.

The Filer asks if you want to transfer 280 blocks, the normal size of an Apple disk. Answer Y. Advanced users can answer N, then specify a different number of blocks to transfer. Experimenting is risky, though; you can easily lose files.

Next, the Filer asks if you want to destroy the directory of the destination disk. Answer N to cancel the transfer, or Y to proceed.

If you have only a single disk drive, the Filer asks you to insert one vol-

PRODOS PROGRAMMERS:

Find files fast, add 13 new commands with Thunderclock.®

> Apple® designed ProDOS to automatically read Thunderclock.

So Thunderclock can automatically time and date stamp your disk files. Every time vou create or revise one. Now you can instantly identify your latest entry. Without slowing down or losing your concentration.

Thunderclock also adds 13 new commands to BASIC. making it easy to access the time and date, measure intervals in milliseconds and use interrupts. That can add a new depth of functionality to your programs. Not to mention the rest of the available ProDOSbased software, like AppleWorks.

So if you've got a vacant slot, fill it with Thunderclock. For \$149, its a great way to improve your programming, and your programs. See your dealer or

contact us.

THUNDERWARE. INC.

ume after the other. Just follow the messages on your display. If you have more than one drive, you'll see the messages only if you transfer to and from the same drive.

D(ate

Type D to set the system date. The Filer stores the date in a file's directory whenever a program writes to or creates a file. Whenever you boot to Apple Pascal, the Filer shows the date it recorded on your boot disk the last time you changed it.

The following lines show how to change the date from 1-Nov-85 to 2-Nov-85:

Date set: <1..31>-<Jan..Dec>-<00..99> Today is 1-Nov-85 New date ? 2 The date is 2-Nov-85

If you don't want to change the date, just press the return key instead of typing a new date. To save typing, enter only the portion of the date that changes. The examples in **Table 3** show different ways to enter dates.

P(refix

Unless you specify a volume name or number, the Filer looks for files in the prefixed volume. After you boot the disk, your boot disk's name becomes the prefix. To change the prefix, type P and enter a different volume name.

A lone colon references the prefixed volume. To transfer APPLE3: GRAPHDEMO.TEXT to APPLE2:, first set the prefix to APPLE2:. Next, insert APPLE3: and type T to T(ransfer. Then, type the following data at their respective prompts:

Table 3. Entering dates.

Current Date	Enter	New Date
1-Nov-85	5	5-Nov-85
5-Nov-85	-Dec	5-Dec-85
5-Dec-85	64	5-Dec-64
5-Dec-64	15-Jan	15-Jan-64
15-Jan-64	1-Nov-85	1-Nov-85

Transfer what file?
APPLE3:GRAPHDEMO.TEXT
To where? :\$

The characters :\$ mean "to the prefixed volume, under the same file name." To discover the current prefix setting, type P and a colon. The Filer then tells you the volume name.

Q(uit

Type Q to quit the Filer and return to Apple Pascal's main command menu. Because of the way Apple Pascal keeps portions of itself on disk, if you type Q without your original boot disk in #4: (drive 1), you'll see the message, "Put in APPLE1:" (assuming of course, you booted with APPLE1:).

Apple Pascal 1.2 then pauses for you to insert APPLE1: and press the return key. Earlier versions of Apple Pascal, however, repeatedly check for the root volume. If that happens, you can insert APPLE1: even though the disk-drive light is on. Normally, you shouldn't open drive doors while the disk is spinning, but in this case, there's no alternative except rebooting.

Next Month

Next month, I'll show you how to use more commands in the Filer, and how to write your own programs to access disk files.■

Abbreviated or Descriptive Display

1) Run the SETUP utility program. Insert disk APPLE3:, press the X key to execute a file, and type APPLE3:SETUP. Single-disk-drive users should transfer SETUP.CODE from APPLE3: to APPLE0:, then execute APPLE0:SETUP.

2) From the CHANGE: menu, type C to select operation C(HANGE.

3) Type S to select operation S(INGLE, then type SCREEN WIDTH to display the screen-width information.

4) Type Y to change a value, then enter 80 for a full Filer menu, or 79 for the abbreviated version. It doesn't matter how many columns your display actually has.

5) After you enter a value, SETUP displays the new setting and asks if you want to change it. Press the N key to keep that setting and return to the CHANGE menu, or press the exclamation mark to ignore any change you made.
6) Type Q to quit changing and

6) Type Q to quit changing and bring up the QUIT: menu.

7) Type M to make your changes effective in M(EMORY, then D to create file NEW.MISCINFO on your boot disk. To make Pascal recognize your changes the next time you boot, change that file to SYSTEM.MISCINFO.

8) When you're done, press the E key to E(XIT the SETUP program. Your changes take effect immediately if you've updated them to memory.

GE introduces GEnie. Your low cost way to get on-line, and stay there.

Imagine having access to quality personal computing SIGs, software, CB simulation, E-Mail and games at 1200 baud. But paying only a 300 baud rate.

Here's GEni[™]!

GEnie stands for the General **Electric Network for Information** Exchange. It's a part of General Electric Information Services—the world's largest commercial teleprocessing network. And now the power of GEnie is available to the home computer user.

The High Speed GEnie.

GEnie can take you to new highs in speed and keep you there. Because our non-prime time rate for 300 or

1200 baud is only \$5.00* an hour. That's up to 60% less than you're

paying now.

So when you're wrapped up in a computer group, or heavily into serious conversation, you can keep your eyes on the screen, not on the clock. (More good news: no minimum monthly charges, the sign up fee is just \$18.00 and new subscribers get three free hours until December 31, 1985.)

What wishes Can GEnie grant?

GEnie has most everything. Including LiveWire™CB simulator, RoundTable™SIGs, bulletin boards, GE Mail™classic games like Castle-Quest™and BlackDragon,™conference rooms, newsletters and more.

Sign up from your keyboard: 1-800-638-8369.

Just have your VISA, MasterCard or checking account number ready. Set your modem for half duplex, 300 or 1200 baud. Upon connection enter HHH then press RETURN. At the U#=prompt enter VJM11952, GEnie and press RETURN. (For additional information or assistance call 1-800-638-9636, ext. 21.)

Then get on-line with GEnie. And stay longer, for less.

General Electric Information Services Company, U.S.A.

^{*}Rate applies to 300 or 1200 baud, Mon.-Fri., 6PM to 8AM local time, all day Sat., Sun. and nat'l holidays. Subject to service availability.

HINTS/TECHNIQUES

Apple users know that there's always an easier way to get the job done. A shortcut here, an elegant twist there. That's what Hints/Techniques is all about. It's an information swap for readers who want to share their programming pointers, DOS tips, hardware secrets, AppleWorks applications, WPL enhancements, and all those other insights that make you go "Aha!" in the night. So read on and see if you don't find just the solution you've been looking for.

Routine Maintenance

by Dan G. McCartney

You may want more flexibility with data input than the BASIC GET and INPUT commands offer. The routines presented here provide simple alternatives.

If you have an Apple-compatible 80-column card in your computer, GET doesn't recognize the escape key (ASCII 27) as a possible keyboard response when that card is active (see "80-Column Escapism" in the October 1985 Ask *inCiden*). The reason is that when you press any key except the escape key, its high bit is set, adding 128 to the ASCII code. The routine in **Listing 1** remedies this problem.

When you use the GET and IN-PUT commands, the delimiter to indicate the end of string input is the return key (141), so you are unable to include carriage returns in your string. The routine in **Listing 2**, however, lets you designate your own delimiter—the delete key (255) is a good alternative (line 41100).

Although the INPUT command displays characters on screen as you type them, the GET command doesn't. If you add the following line to **Listing 2**, your program will print those string characters (the semicolon at the end of the line suppresses the carriage return):

41080 PRINT A\$;

Additionally, you can display control characters on screen without fouling up the display by adding the line below:

41070 IF A < 160 THEN INVERSE:PRINT CHR\$(A + 64);:NORMAL:GOTO 41100

Finally, you can add a cursor: 30010 PRINT "_ ";CHR\$(8)CHR\$(8);: REM Again note the final semicolon

Listing 3 is a skeletal program demonstrating the use of these routines. The program ends if you press the escape key or if your string input (N or n) indicates that you do not want to continue. Otherwise, the program prints your input.

One drawback to using the stringinput routine is that you have to specify unusable characters. For example, you might want to add a line to eliminate control-U since it turns off the 80-column card. Also, if you want to backspace (— or control-H) to correct mistakes, you should insert a line similar to the following:

41060 IF A = 136 THEN S\$ = LEFT\$ (S\$,LEN(S\$) - 1): PRINT A\$;: GOTO 41000 :REM Don't forget the semicolon

Another problem is that string input is rather slow if your program is long, since the routines are in Applesoft BASIC. The routines are there if you need them, though, and the advantage of having an additional technique in your programming repertoire will outweigh any minor difficulties.

Write to Dan G. McCartney at 3010 Turner Avenue, Roslyn, PA 19001.

APPLEWORKS ENHANCEMENTS

Read why Applied Engineering is the acknowledged leader in AppleWorks enhancements

- Applied Engineering was first to expand Appleworks beyond 55K.
- Applied Engineering was first to eliminate disk access on Drive 1 in Appleworks, thereby dramatically speeding up the program and reducing disk drive wear.
- Applied Engineering was first to expand AppleWorks to 1 megabyte of memory.
- Applied Engineering was first to expand AppleWorks to 3 megabytes.
- Applied Engineering was first to provide auto segmenting on large files so any size file can be saved on regular floppies.

- Applied Engineering was first to increase the maximum number of records in the data base from 1350 to 16,300.
- Applied Engineering was first to increase the number of lines in the AppleWorks word processor from 2250 to 16,300.
- Applied Engineering was first to display the time and date on the AppleWorks screen.
- Applied Engineering was first to provide auto dating as part of the data base field.
- Applied Engineering was first to provide auto time stamping as part of the data base field.
- Applied Engineering was first to include a builtin print spooler for AppleWorks. So you're back in AppleWorks in 10 seconds not 10 minutes.

With all of these firsts, it's no wonder most people choose Applied Engineering when they want enhancements to Appleworks. Especially when you consider that nearly all the "firsts" listed above are "onlys" too. And our Appleworks enhancements are as easy to use as inserting a disk and pressing return because all enhancements are merged with the AppleWorks program disk and stay there out of sight until needed, only now AppleWorks will run up to 20 times faster, and be easier to use at the same time.

And we're working on new improvements to AppleWorks all the time, so the few remaining criticisms the software reviewers gave AppleWorks will vanish forever. So if you want more out of AppleWorks, order RamWorks II™ and Timemaster H.O.™ for the IIe or Z-RAM™ and IIc System Clock™ for the IIc. You'll find specifications and prices for these products listed in this magazine. Please look for Applied Engineering in the advertiser's index.

There's no question about how they'll increase your productivity. The only question you'll have is how you ever got along without them.

214-241-6060

Programming Above HGR by Richard Putt

A long program that uses high-resolution graphics often spills over into memory space reserved for the hi-res graphics display. Free memory space (where the computer places a program) begins at memory location \$801, and hi-res graphics page 1, at memory location \$2000-allowing a total of only 6K bytes in which to program. (A program occupying about 24 sectors on a disk can easily fill this space.) Lines at the end of the program consequently vanish when you run the program, because the HGR command clears whatever resides in the graphics-screen area.

Using HGR2—the second page of hi-res graphics, which occupies memory locations \$4000-\$5FFF—instead gives you 14K bytes for your program. This graphics page, though, lacks the split-screen ability of page-1 graphics, which lets you have four lines of text at the bottom of the screen.

Table. Monitor procedure to move the beginning of free memory from \$801 to \$4001.

Type In	Meaning
CALL - 151	To enter the Monitor
67:01 40	Pointer to start of program
4000:00	
3D0G	Return to BASIC
NEW	Reset other pointers
	CALL - 151 67:01 40 4000:00 3D0G

Listing 4. From a text file, enter the following program to move the beginning of free memory from \$801 to \$4001.

10 D\$ = CHR\$(4)

20 PRINT D\$ "OPEN HI.START" 30 PRINT D\$ "WRITE HI.START"

40 PRINT "CALL - 151"

50 PRINT "67:01 40"

60 PRINT "4000:00" 70 PRINT "3DOG" 80 PRINT "NEW"

90 PRINT D\$ "CLOSE HI.START"

A better solution (one that lets you use HGR and its text window) is to move the starting location of your program from \$801 to \$4001, the location just above the HGR screen. You can do this directly from the Monitor by following the procedure in the Table, or by EXECing a text file after you enter Listing 4 presented

After you run Listing 4, catalog your disk. This writes a text file called HI.START on the disk. The command EXEC HI.START executes the commands stored in this text file, enabling your program to occupy the space above the hi-res screen.

Write to Richard Putt at 113 Harrisburg Pike, Dillsburg, PA 17019.

APPLE CLINIC

by Jim Sather

The Apple Clinic is a forum for discussing Apple II hardware and related subjects. If you have questions or answers, or want to make a statement, write to Jim Sather, Apple Clinic, inCider, 80 Pine Street, Peterborough, NH 03458.

Selectric Interface

In your March column, you indicated you use a converted IBM Selectric typewriter as a printer. Will you tell me how you adapted it and if you find it satisfactory? The dot-matrix and daisy-wheel printers I've tested to date are unsuitable for printing multiple copies on NCR paper. It would be wonderful to do invoicing on an Apple-compatible printer with the impact pressure I need.

A final question: Dare I hope that the commands directing your Selectric are similar to those for Epson MX/FX?

Peter R. Lippman Katonah, NY

Boy, the mention of a Selectric connected to my Apple sure caused a few readers to perk up. I thought my Selectric was one of my many dinosaurs, but apparently some people would like to have a dinosaur just like mine. Unfortunately, I can't tell all my would-be fellow cavemen how I adapted a Selectric to the Apple because I didn't do it-a small San Diego company specializing in such things did. For about \$500, SSI Electronics sold me a used IBM 1980 buffered terminal, overhauled it, and added its own solenoid power supply and Apple interface card with onboard firmware. It was a good buy.

You can't buy an IBM like mine from SSI Electronics anymore—the company went out of business. After all, who would buy a used mechanical monster when a new mechanical pussycat (a daisy-wheel printer) can

do almost the same thing for the same price? True, a number of persons and companies needing the superior text quality of IBM Selectric printouts would be willing to pay the price of slow speed and occasional servicing, but there weren't enough to keep SSI in business.

One problem in discussing Apple/ Selectric interfaces is that people refer to every IBM typing machine with a type-ball print mechanism as a "selectric." That class of IBM Selectric typewriter, which has no control-input connection of any sort, is difficult to interface to a computer. IBM electronic typewriter models 50, 60, 65, 75, 85, and 95, however, have both a Selectric-like print mechanism and a control-input jack. Applied Creative Technologies makes the ETI² interface box, which lets a computer control these typewriter models via an RS-232 or Centronics parallel port.

Another alternative is to obtain a surplus Selectric designed for use as a data terminal, like my 1980. George Young's book, The Selectric Interface, A Hands-on Approach (\$12.97, 1982, Wayne Green Publications), provides a guide for interfacing computers to Model 2740 and 2980 Selectrics and to the Dura 1041 tape punch/reader. Charles Behrens' "Apple to Selectric for 83 Cents" (Kilobaud Microcomputing, August 1981, p. 95) shows an Apple game I/O interface circuit and 6502 drivers for a Selectric terminal with RS-232 interface built in. Mr. Behrens' terminal is a Selectric-like Carterfone S15B Data Terminal.

All this information is admittedly sketchy, but the interfacing process is complicated. Interfacing Selectrics to computers never graduated from being a hobbyist undertaking. Even if you know where to buy an interfaced Selectric off the shelf, you'd better have a little hacker in you if you want to take on this project.

Is my Selectric interface Epson MX/ FX-compatible? No way. My interface is custom-designed for an IBM terminal with no "ready to receive" feedback from the terminal to the interface card. Its firmware driver has idiosyncrasies like timed loops for timing out carriage returns and tabs. I should think, though, that a table-top interface like the ETIP would work with just about any Centronics parallel or RS-232 serial Apple interface card.

Am I satisfied with my Selectric as a printer? Not really. It's too slow, noisy, and mechanically complex. I'd rather have an upper-level daisy-wheel printer. My needs are modest, though, compared to those of companies that must print high-quality text in triplicate. I advise them to get an impact dot-matrix printer with a near-letter-quality mode and fake it. If that quality is insufficient, they can use a daisy-wheel printer or computer-interfaced daisy-wheel typewriter and a photocopier.

80-Column Control From BASIC

One day, while experimenting with my Apple //c, I discovered I could use the //c's second character set by printing flashing characters with the 80-column card deactivated, then pressing escape-4 or escape-8 to activate the card without clearing the screen. I'd like to use the second character set within my BASIC programs to get effects like those of AppleWorks or the System Utilities program. The only way I can use the 80-column card within BASIC is with a PR#3 command, but it clears the screen. PRINT CHR\$(27);"8" just doesn't work. How can I use the second character set within BASIC?

Juan S. Lach Mexico City, Mexico

You confuse me a little when you talk about a second character set, Juan. Do you mean the mousetext? In any case, the escape-4 and escape-8 commands won't work in a

CRG PRODUCTS FOR THE APPLE COMPUTER SOUTHERN CALIFORNIA RESEARCH GROUP

$\overline{\overline{quik}}Loader^{\scriptscriptstyle\mathsf{TM}}$

designed by Jim Sather

- Instantly loads DOS.
- Instantly loads programs.
- Stores up to 512K of programs on EPROM.
- Stores and catalogs up to 255 programs.
- Directions included to load your own software (requires EPROM programmer card).
- Plugs into any slot of the APPLE][+ or //e.
- Uses standard 27 series EPROMs up to 27512.
- Allows turnkey operation.
- Commercial programs available.
- Includes DOS, FID, COPYA, and Integer.

The benefits of quikLoader™ start when you turn on the The benefits of quikLoaderTM start when you turn on the computer. Standard DOS is instantly loaded. You may then catalog the programs available on the card by pressing Q-reset. Typing the index letter that appears on the left of the program name causes that program to be immedia:ely loaded. We start your library of programs with the most oopular utilities on EPROM, FID and COPYA. Now, if you have to copy a disk, you don't have to search for the master disk. You can start copying within 3 seconds after powering on after powering on.

Saving your own programs onto EPROM (Eraseable Programmable Read Only Memory) is easily done, using a seperate EPROM programer, (such as the PROMGRAMER™). For APPLESOFT™, Integer, or single machine language files, no programming knowledge is necessary. You will need experience if you want to save copy-protected or complex programs. The amount of experience programs are the complexity of the experience necessary depends on the complexity of the program.

SYSTEM REQUIREMENTS

The quikLoader plugs into any slot of the][,][+, or //e. If installed in a][+, a slightly modified 16K card in slot \varnothing is suggested. A disk drive is required to save data.

\$179.50

DOS, Integer basic, FID, and COPYA are copyrighted programs of APPLE COMPUTER INC. licensed SOUTHERN CALIFORNIA. RESEARCH GROUP to distribute for use only in combination with quikLoad.

NEW PRODUCTS

SLOT 3 CLOCK Dealgned by Chuck Shaffer

- for APPLE //e
 Fully supports PRODOS™ . •APPLESOFT™ compatible.
- Designed for slot 3 (usually otherwise unusable). Time and date-stamp files under PRODOS.
- Long-life lithium battery included. Installation software included.

\$79.50

DUAL KEYBOARD ADAPTER

For Apple][and][+ <u>only.</u> Allows the use of the built-in keyboard <u>or</u> external keyboard with no switching necessary. \$39.50

//c keypad
This kit will give you an "embedded" keypad within your built-in keyboard. You may instantly switch between the keypad or the standard keyboard. CAUTION – Requires dis-assembly of the computer, and expert de-soldering and soldering ability.

\$29.95

OTHER PRODUCTS

D MANUAL CONTROLLER: Gives complete control over the \$CØØØ through \$CØFF range in hardware. Think of it as a hardware switch for soft switches. Can be switched while program is running. \$89.50

MAGIC KEYBOARD (for][or][+<u>only</u>) Re-encodes the keyboard to give alternate keyboards, such as DVORAK A.S.K., 10-KEY, HEXADECIMAL KEYPAD, etc. **\$49.5**0 \$49.50

PROMGRAMER

The PROMGRAMER™ will read or program any of the standard single voltage EPROMS, from the 2708 to the 27512. Features include:

- Slot independent operation for the APPLE // family of computers.
- Zero-insertion force sockets accepts 24 or 28 pin devices.
- Choice of standard or fast programming algorithms.
- Disk-based software allows easy customization of
- Source code included.
- Complete instructions for loading PROmGRAMER software into quikLoader™.

\$149.50

EXTEND-A-SLOT

EXTEND-A-SLOT brings a slot outside your PLE™, allowing an easy change of cards. The 18" flex cable is long enough to allow placement of the card in a convenient location. The high quality connectors are gold plated for reliability

EASY TO USE-just plug it in as you would any expansion card, then plug your card in. When you want to change cards, do it easily outside the computer, without the wear and tear on the computer expansion slot.

SWITCH-A-SLOT

designed by Joy George
The SWITCH-A-SLOT is an expansion chassis, which
allows the user to plug in up to four periperal cards at one
time. One of these cards is selected for use, and only that card draws power

This product is especially useful where the software requires the printer to be in a particular slot, and the user wishes to choose between two or more printers.

- User selects desired card by front panel rotary switch.
- · Plugs into any peripheral slot
- Saves wear and tear on delicate connectors
- 18" cable connects SWITCH-A-SLOT to computer.
- Resistive terminations for better response

SWITCH-A-SLOT and EXTEND-A-SLOT work well with most slow to medium speed cards, such as Modems, Printers, Clock, 80 Column, Music, etc. They are not recommended for high speed data transfer devices such as disk drive controllers, alternate processor, and memory cards. We cannot guarantee that these products will work with a particular system. We do have a money-back guarantee if it does not work for you.

Paddle-Adapp GAME I/O ADAPTER AND EXTENDER

Paddle-Adapole

Works with all APPLETM compatible joysticks, paddles, and most other I/O devices.

- Select one of two devices or...
- Use two joysticks simultaneously
- Suggested for One-on-One™, Archon™, etc.
- Unique "JUMPERS" socket allows you to configure to meet your needs
- Plugs into internal 16-pin game I/O port.
- Small and compact. Adhers to computer with supplied foam tape.
- All strobes, annunciators and power available on all 16 pin sockets.
- Supplied with 18" cable

\$29.95

The PADDLE-ADAPPLE 'D' has two 'D' sub-miniature

The PADDLE-ADAPPLE COMBO has one 16-pin socket, and one sub-miniature connector.

9-16 Adapter

This product permits the use of most 16 pin I/O devices with the APPLE I/c or I/e. By plugging this adapter into the sub-miniature 'D' connector, (in back of the computer), you can plug in a 16-pin device, such as the PADDLE, PADAPPLE, paddles, joystick, KOALA PAD™, etc. The only limitations are those devices that use the annunciators or the CO4O strobe, such as the POWER PADIM Please note that the I/C does PAD™. Please note that the //c does not support 2-joystick games

16-9 Adapter

This product permits the use of all 9-pin game I/O devices with the APPLE][+. By plugging this adapter into the internal 16-pin connector, you can plug in any 9-pin game game device, such as paddles, joysticks, KOALA PAD™, Muppet Learning Keys™, etc. Kevs™, etc.

APPLE CLINIC

PRINT statement because keyboard-input routines, not video-output routines, interpret them. The near-equivalent video-output commands are control-Q and control-R—PRINT CHR\$(17) and PRINT CHR\$(18). Unfortunately, these commands work only if you previously activate the enhanced-video firmware with PR#3. Once the enhanced-video firmware is active, you can use control-Q and control-R to switch between 40- and 80-column display without erasing the screen.

To use mousetext from a BASIC program, activate the enhanced-video firmware via PR#3, then activate or deactivate mousetext printing via PRINT CHR\$(27) or PRINT CHR\$(24), respectively. With mousetext activated, when you print inverse uppercase characters or the symbols @[\]^_, mousetext appears on screen. Alternately, you can set the ALTCHAR soft switch (POKE – 16369,0), then POKE mousetext ASCII (values 64–95) directly into text-display memory (loca-

Program listing. Printing mousetext.

- 10 PRINT CHR\$(4); "PR#3"
- 20 INVERSE
- 30 A\$ = "@ABCDEFGHIJKLMNOPQRS TUVWXYZ[\]^_"
- 40 PRINT CHR\$(27);A\$
- 50 PRINT CHR\$(24);A\$

tions 1024–2039). The accompanying **Program listing** illustrates the printing of mousetext from a BASIC program and gives the mousetext/character equivalents. This program will run on an Apple //c or an Apple //e with enhanced firmware.

Apple //e Enhancement

An acquaintance told me I need an Apple Super Serial interface card if I want any printer to work with an enhanced Apple //e. I'd like to know if this is true or not. I recently bought a second Apple //e with the enhance-

ment feature to use only as a backup system. I want to run all my software and hardware configurations on either system. I sincerely hope this is not going to be another nightmare like AppleWorks' not being able to use non-Apple products.

Robert P. Johnson Twin Lakes, WI

Any printer-interface card that works with the old Apple //e firmware will work in an enhanced Apple //e.
Nothing in Apple //e firmware or hardware mandates the use of a Super Serial card. Of course, it's always possible you'll encounter software that supports only a limited number of interface cards and printers.

I don't foresee many compatibility problems in store for those persons who own enhanced Apple //e's. Rather, owners of Apple II's, II Pluses, II compatibles, and unenhanced //e's may discover that some software written for the //c and enhanced //e won't work in their systems. I should think, however, that most software will continue to be written for all Apple II family computers. 65C02 code is a little more efficient than 6502 code, and mousetext is nice, but software publishers aren't likely to restrict the size of their market for reasons as minor as these.

Applesoft in Early Apple II

I have an early Apple II (serial number 244) and have been running an Applesoft firmware card in slot zero. I approached my local authorized dealers about switching the chips from the firmware card to the mother-board to free slot zero, but they both backed off. If I knew what went where, I could save a 120-mile round trip. Is there a source I can turn to?

I would also like to know if I can install an Autostart ROM and a Dan Paymar Lower Case 1 chip in my machine.

Tom Hudgins Galion, OH

You can transfer the Applesoft chips from the firmware card to the motherboard. Just make sure to transfer the chips to the correct sockets. The chip from the D0 socket on the firmware card goes to the D0 socket on the motherboard, and the same goes for the D8, E0, E8, F0, and F8 sockets.

10 Good Reasons To Upgrade To The New 128K HomeWord Plus

Apple™ IIe/IIc HomeWord owners...everything you've asked for in an upgrade.
The New HomeWord Plus Word Processor and Spelling Checker includes:

- 1. 80-column screen display option
- 2. Support of new Apple II Memory Expansion Card
- 3. Built-in spelling checker
- **4.** New manual which includes Advanced Features section
- **5.** Uncopyprotected disk for making back-up copies
- 6. Installable on hard disk
- 7. Mouse support
- 8. Optional support of new Apple UniDisk 3.5 drive for 3½-inch disks
- 9. 24-line (full screen) display option
- **10.** ProDos support makes your disk drives faster and allows disk directories

Bank Street Writer™ owners...besides the upgrade features, HomeWord Plus includes all the original HomeWord features not present in your current word processor:

- 1. 32K document buffer for files that are twice the size of any you've created up to now
- 2. On-screen picture of entire formatted page
- 3. Three ways to justify text anywhere within the document: left, right and both sides
- 4. Moveable tab settings
- 5. Underline and boldface print styles
- 6. Top, bottom, left and right margins adjustable anywhere within document

- 7. Line spacing adjustable within document
- 8. File linking for potentially unlimited document length
- 9. File merging
- 10. Cursor movement by character, word, line, screen page, or formatted page
- 11. Two modes of text entry: Insert and Change/Replace
- 12. Automatic outlining using decimal or number/letter points in four levels
- 13. Print selected pages option

Or choose the 128K Dos 3.3 upgrade...All the features of the original HomeWord, plus the 80-column screen option. Can be used with all your old text files!

The Autostart ROM will work in any Apple II or II Plus motherboard. Install it in the F8 socket. The Dan Paymar lowercase adapter comes in two versions—one for early motherboards and one for revision 7 and later motherboards. You need the one for early motherboards, but I'm not sure which one you have now. For the straight story on lowercase adapters, call or write Dan Paymar, 91 Pioneer Place, Durango, CO 81301, (303) *259-3598.*

AppleWorks on Franklin

In the March 1985 Apple Clinic, you stated that AppleWorks won't work properly in a Franklin ACE computer. I'd like to inform you that Videx Corporation now makes a pre-boot disk called AppleWorks Modifier that allows use of AppleWorks on an Apple II or II Plus. Despite the usual "ProDOS doesn't load on a Franklin" speech I got when I phoned Videx, I decided to buy its modifier disk. I can

pass along instructions I believe will let you use AppleWorks on a Franklin ACE 1000 or 1200. Videx's literature currently mentions only the Apple products and new keyboard commands to replace the //e and //c keys. I've found that the following booting procedures and keyboard substitutions will work on my ACE 1000 with Franklin's own ACE-80 80column card.

Start by booting the AppleWorks Modifier disk. Disk booting will proceed for a while, then abort because ProDOS version 1.0.1 doesn't boot on a Franklin. When the loading stops suddenly and the screen and keyboard freeze, hit the reset button. You'll hear two beeps from the speaker and get an asterisk on the screen. First, type 265B:EA EA and press the return key. Next, type 2000G and press the return key again to continue the boot procedure. Then, follow the instructions displayed on screen.

The accompanying Table shows some necessary Franklin keyboard substitutions. In addition, if you have trouble with the @ symbol in the AppleWorks spreadsheet formulas, toggle the caps-lock function with control-C. Videx also recommends its own Videoterm or Ultraterm 80-column cards, which both work well in the Franklin, but I've had no trouble with my ACE-80 card and Apple-Works so far.

Table. Keyboard substitutions for AppleWorks on Franklin.

Apple //e or //c	Franklin
Caps lock	Control-C
Open apple	Control-A
Delete	Control-left arrow
Up arrow	Control-K
Down arrow	Control-J

Since I don't have much experience with AppleWorks, I can't guarantee these are all the substitutions needed, but I believe the modifier disk and my ProDOS version 1.0.1 booting procedure will let Franklin users get started with AppleWorks. Maybe someday Videx will use new versions of ProDOS that will load properly on a Franklin and include keyboard changes in its literature, as well.

If You Have

APPLEWORKS[™]

It's Easy To Tell If You Have A Timemaster H.O. Clock In Your Apple

Just Look Right Here

Only the Timemaster H.O. displays the date and time on the Appleworks screen.* If you don't have a Timemaster H.O., you'll just get the help key reminder. The Timemaster H.O. will also automatically time and date stamp your files on disk. And don't forget, the Timemaster H.O. has all the features of all the competition combined, including year, leap year (not just in PRO-DOS), month, date, day, hours, minutes, seconds and milliseconds. The Timemaster H.O. is compatible with PRO-DOS, DOS 3.3, PASCAL and CP/M. And the Timemaster H.O. automatically emulates all other clock cards so you won't have any compatibility problems because the Timemaster H.O. works with ANY program that reads ANY clock.

In fact, you could put ALL the competitive cards in every slot in your Apple and you still wouldn't have all the features of the Timemaster H.O.

The Timemaster H.O. comes with a ton of fun and useful software. It has an easy to read yet detailed manual, a 20 year auto-recharging battery and a 3 year no hassle warranty.

TIMEMASTER H.O. SIMPLY PUT, IT'S SIMPLY THE BEST

\$129.00 Complete

*If you purchased a Timemaster H.O. prior to AppleWorks support, an easy to use patch program is available for \$20.00.

We Set the Standard

Call (214) 241-6060 9 a.m. to 11 p.m., 7 days a week or Send check or money order P. O. Box 798

Carrollton, Texas 75006

MasterCard, Visa and C.O.D. welcome. No extra charge for credit cards.

Texas residents add 51/8% sales tax. Add \$10.00 if outside U.S.A.

Thanks for all the information, Rick. It looks pretty good. Readers should note that the September 1985 Apple Clinic procedure for patching ProDOS to work with Apple compatibles will probably work on the Videx Apple-Works Modifier disk. Be sure to work with a backup instead of your original disk.

New Minute Manual

Jim Pirisino, the minute-manual guy, recently sent me a copy of his latest book, Minute Manual for the Dot Matrix Printer. It looks like a good book for persons seeking basic information about dot-matrix printers, particularly Epson, Okidata, Gemini, Prowriter, NEC, and Apple dot-matrix printers.

This manual has many nice features, but the one that caught my eye was a benchmark test on the true printing speed of various printers. The test consisted of printing a 26,332character Apple Writer file on an Apple //e with Grappler Plus interface (or Apple //c with serial interface in the case of the Apple ImageWriter) with 1-inch page margins on all sides. Mr. Pirisino's test results show the characters-per-second (cps) ratings various manufacturers claim are totally unreliable guides to printing speed. One particularly surprising result is that the 120-cps ImageWriter has a higher practical printing speed than the 160cps Epson FX-80.

The book's strengths include comparative information about the printers covered and clear descriptions of modern dot-matrix-printer features. Weaknesses include lack of specific information about printers other than those mentioned above. Panasonic

More Mouse and Switch-A-Slot

Southern California Research Group got back to me concerning the mouse/Switch-A-Slot compatibility problem James W. Patton brought up in September. It seems the problem goes away if you replace the 74C245 on the mouse-interface card with a 74LS245. The chip is not socketed. so you'll have to unsolder the 74C245 if you want to make this swap. Unsoldering DIP ICs is tricky, so don't attempt it unless you have experience with a soldering iron.

Apple told SCRG it would start using the 74LS245 on the mouse-interface card, so the problem shouldn't exist with newly manufactured interface cards. This isn't a design error; Apple is just cooperating with a peripheral manufacturer to overcome an unforeseen compatibility problem.

APPLESOFT ADVISER

Trivial Trivia: Part 1

by Dan Bishop

Hooked on trivia games? Here's one you'll never outgrow—because Trivial Trivia lets you make up your own questions and answers, then change them whenever you want a new challenge.

Trivial Trivia is a BASIC program that lets up to three persons enter multiple-choice questions in four categories into random-access disk data files. The program keeps each person's questions in separate files. Thus you can have up to a total of 12 data files (four categories times three sets) containing the multiple-choice questions for Trivial Trivia.

During the game, up to ten persons, including the individuals who entered questions into the data base, can randomly access those questions. The program ensures that none of the question composers will ever get his or her own questions.

After each response to a multiple-choice question, your computer displays a scoreboard showing each player's progress by category, with a sum for all four categories and a total percentage score. The program maintains an index of questions used, so that no question from the data base appears more than once. At the conclusion of play (whenever any player types in the word STOP), you can store your scores and the question index to disk so that you can later resume play where the game had stopped.

You can add visual enhancements to the program—title pages and graphics—if you like. You can also omit REM statements at your discretion, since none of the program commands refers to such lines.

Getting Started

Since Trivial Trivia uses up to 14 data files (questions and answers, plus statistics) in addition to the program itself, save the program on a

In search of the ultimate trivia game: Applesoft lets you create your own.

fresh disk and use it for the game. By the time you've added 40 questions to each of 12 trivia files, you will have used up more than 130,000 bytes of disk storage. You can have several Trivial Trivia programs going simultaneously, each with different categories if you like, as long as you keep each set and its accompanying program on a separate disk.

As it's listed here (see the **Program listing**), Trivial Trivia presents you with four categories: arts, science, history, and entertainment. You may use any other set of four categories you prefer. Before running the program simply change line 900, a DATA statement, to include your own headings.

The first display you see is a prompt to press the return key to start the program. This actually seeds the random-number generator (a suggestion sent to me by James R. Clark of Bridgeville, Pennsylvania) so that successive runs of the program will be based on different random-number sequences.

The next two prompts are similar to many of the others throughout the program—a (Y/N) following a question. (Type Y for "yes," N for "no." Be sure your caps-lock key is on.) The only other entry the program will allow at a (Y/N) prompt is the word STOP (all caps), which makes the program save intermediate results to disk before it ends the game.

The first question is ARE YOU CONTINUING WITH A GAME AL-READY IN PROGRESS FOR WHICH SCORES HAVE BEEN SAVED TO DISK? (Y/N). If you told your computer to save scores at the end of your previous session of Trivial Trivia and now want to continue the game with your old scores and question index, type Y.

If you answer N, the second question appears: DO YOU ALREADY HAVE SOME QUESTIONS IN YOUR DISK DATA FILES? (Y/N). You should answer N to this question only if you're starting with a fresh disk that has no trivia questions in its data base yet, or if you want to erase all current trivia questions and start again from scratch.

Your computer next displays the message: LOADING INDEX. ONE MOMENT, PLEASE! After a short pause, the program's master menu appears. This menu gives you three options: 1 allows you to enter questions into the data base or edit your questions; 2 begins the game; and 3 ends the program. Select an option by typing the appropriate number.

The program then reminds you that you may type the word STOP to end the game at any time, and asks you to press the return key again to continue.

Entering Trivia

IN THIS MODE, YOU MAY ENTER TRIVIA QUESTIONS, MULTIPLE CHOICE ANSWERS, AND A SINGLE CHARACTER IDENTIFYING THE CORRECT ANSWER. THIS PROGRAM SETS UP THREE DISTINCT SETS OF QUESTIONS FOR EACH CATEGORY. THIS ALLOWS YOU TO ENTER QUESTIONS AND STILL PLAY THE GAME USING QUESTIONS ENTERED BY SOMEONE ELSE. SELECT A NUMBER (1–3) TO INDICATE THE SET OF QUESTIONS THAT WILL CONTAIN YOUR CONTRIBUTIONS.

When you see this message, you're off and running. Enter a number from 1 to 3. This will be your identifying number when you're playing the

LOOK GOOD ON PAPER

Let's face it. You bought your printer for one reason only. To make what you think or feel come through in the best possible looking letter, memo, presentation or spreadsheet. That's why it's important for you to be able to use the full built-in capacity of your printer. Huge intimidating manuals and inscrutable instructions have probably stood in your way...until now.

FACELIFT™ 2 makes it easy, fast and fun to flex the muscles of your printer. Speedier and more versatile than the original bestselling FACELIFT, FACELIFT 2 offers many improvements to make you look better than ever on paper.

Be as creative as you dare.
FACELIFT 2 gives you a choice of 92 different sizes and typeface combinations on EPSON* X-Series* printers, compatibles and on the IBM* Graphics Printer. (On the EPSON* LQ-1500 you can express yourself with over 400 typefaces!) You'll never produce a ho-hum letter again.

Get your spreadsheets read. If you use 1-2-3™ or similar programs, you can print an entire 12-month spreadsheet onto one regular page in clear crisp type.

Create professional-looking presentations and documents that stand out and command attention. FACELIFT 2 will automatically center titles and headlines on a page in 6 different typestyles — directly from your keyboard to the printer. Even in large reversed type! Without having to create a separate file.

Dash off quick notes or memos, also without separate files, by using your computer keyboard like a typewriter. Make a bold statement or underscore your ideas

by mixing FACELIFT 2's typefaces on a single line or on a page. You can also set margins, indent, create columns and do automatic wordwrapping. FACELIFT 2's keyboard feature

FACELIFT 2's keyboard feature also works on your letter-quality printer (COMREX® CR-II or CR-III and BROTHER® HR Series). Type directly onto the printer, set margins and even correct typos. Terrific for addressing those last-minute envelopes.

Save that important memo. You can save up to 40 pages' worth of text to print later... in any of the FACELIFT styles.

Need a symbol for the Yen? With one keystroke FACELIFT 2 puts you into the international character sets for Spanish, French, British, Swedish, Japanese, Danish, Italian and German. No more complicated codes to remember.

FACELIFT was the "no frills choice" for **PC Magazine** (9/17/85). Now upgraded and enhanced, FACELIFT 2 will surely become the one printer users prefer over all other utility programs.

FACELIFT 2 takes only seconds to learn with minimal instructions. And it's only \$49.95.

*MX-80™ must use GRAFTRAX.™

WITH THE NEW FACELIFT™ 2

Now available for the Apple II Series. IBM PC, PC AT, PC XT and compatibles version also available. Please specify on your order.

game—be sure the other individuals entering questions choose different numbers, as the computer uses them to keep track of who you are and the question sets that contain your trivia. If you follow these rules, the game will never ask you one of your own questions.

After entering your identifying number, you will see the Add Trivia menu, again with three options. The first lets you add new trivia questions; the second lets you edit an existing question; the third returns control to the previous menu (described above).

As soon as you enter your selection, the list of categories appears. You must decide under which of the four categories you'd like to save that question. Enter a number (1-4) to indicate your choice.

Entering questions involves a two-part process. First the program prompts you to type in a question three lines long, with no more than 35 characters per line. (You must use three lines, even if one or two are totally blank.) Press the return key either at the end of each line you type in, or by itself for a blank line. If your line contains a comma, enclose that line in quotation marks.

After entering the third line, you will see another prompt: IS THIS QUES-TION OK? (Y/N). If you respond with N, the question-entry process will start over from the top.

The second data-entry step calls for you to type in five multiple-choice answers, with no more than 25 characters in each. Follow the same rules as outlined above. A true/false question requires actual entries only in the first two lines; respond to the remaining three lines by pressing the return key.

The program then asks you to enter the number of the answer line containing the correct response. Type in a number (1–5). The program then displays the entire question, with answers, in addition to the prompt ARE YOU SATISFIED WITH THESE ANSWERS? (Y/N). Check the display carefully. If you answer N, the second data-entry step will begin again, allowing you to reenter the five answer choices.

Note that the top line of the display shows the actual record number that will contain the question. You must give your computer this reference number whenever you want to alter your entry at some later date. (You should also record the number for future reference.)

After you've indicated you're satisfied with the question and answers displayed, the program asks you to wait a moment while it stores the data to disk. The program then returns to the Add Trivia menu.

When you've finished adding your questions for this session, type in STOP to end the program. At this point another person may run the program and enter his or her questions. You may return to the Add Trivia mode at any time to make further additions to your list of questions.

Playing the Game

Selecting option 2 from the master menu begins the actual game. The program first asks you to type in each player's name (it keeps only the first ten characters), then an identification number. Players who have not entered questions into the data base should choose numbers between 4 and 10. Those who have composed questions should use the same identification number they chose when typing in questions.

After you've entered names of all players the program displays the list of names, with the question WHO'S UP? (NUMBER, PLEASE).... When you type in your number Trivial Trivia displays the list of categories, and asks you to select one. Your computer then generates two random numbers, uses them to select a question from the data base, and displays the question on screen. Respond to the multiple-choice question by entering a number (1-5). The computer evaluates your response and announces whether it is correct or not, then asks you to press the return key. The program then displays the Trivial Trivia Scoreboard, showing everyone's score for each category, along with a total and the percentage of correct answers for each player. Press the return key to continue the game and generate another WHO'S UP question.

If you run out of questions in a specific category, the message SORRY, NO MORE QUESTIONS ARE AVAILABLE IN THIS CATEGORY appears. This message does not necessarily mean that another player will be unable to find questions in that category. The trivia questions you entered into that category of the data base are unavailable to you, but all the other players can access them.

To end the game, type in STOP. The program displays the scoreboard once more, then asks DO YOU WISH

Davidson is ***1, ***1, ***1, & ***1 in Education

For math, speed reading, spelling and vocabulary, Davidson's award winning software outsells all others. Why? Because enough people choose to buy the educational software that works.

MATH BLASTER makes it more fun to add, subtract, multiply, divide, and learn fractions, decimals

and percents. First through sixth graders master 600 math facts with exciting graphics, animation, sound effects...even an arcade game. Apple™, Macintosh™, IBM™ Commodore 64/128™, Atari™. 49.95

SPEED READER II can quadruple your reading speed and improve your comprehension. Develop

good reading habits, chart your progress, and have fun! For high school age through adult. Apple II™, Macintosh™, IBM™, Commodore 64/128™. 69.95

WORD ATTACK lets students ten through adult discover the meanings and usages of 675 new words.

Includes a fun, fast-action arcade game and add-your-own-words editor, Apple™, IBM™, Commodore 64/128™, Atari™. 49.95

SPELL IT teaches ten year olds and older how to spell a thousand and one of our most commonly

misspelled words. Vivid graphics, animation, sound effects, a lively arcade game and add-your-ownwords editor, too! Apple™, IBM™ Commodore 64/128™, Atari™, 49.95

TO SAVE THESE SCORES IN ORDER TO CONTINUE THE GAME LATER? (Y/N). The questions themselves will remain in the disk data files, no matter what you do here. This question refers only to the players' names, their scores, and the question index that keeps track of the questions you've already used. Type Y if you intend to resume this game later.

Editing Trivia Questions

If you select option 1 from the main menu to "enter data" and option 2 from the Add Trivia menu to "change trivia," the program will ask you to type in the data-base record number of the question you want to edit. The prompt tells you the maximum number you can enter (corresponding, of course, to the total number of questions in that set). If you enter a zero, the program cycles back to the Add Trivia menu.

Once you have entered an acceptable number, the program you've specified displays the question and asks you if that's the question you want. An N response takes you back to type in another record number. Y cycles you through the question-entry sequence, followed by the answer-entry sequence, with the prompts discussed above.

Conclusion

Applications for the program presented here extend well beyond trivia games. Teachers can use the program for drill or exams (since the program tallies and displays scores), with the questions entered by either teacher or students. Since the program keeps score for each player by category, the teacher can use an appropriate choice of questions to diagnose which of four areas may require further study. Another possibility lies in psychotherapy. Two persons can use the game in an encounter session by entering personal questions and examining the answers as a basis for discussion.

Next month I'll provide detailed information on program operation, including a hierarchy diagram, list of variables, file-structure diagrams, and a few flow charts for some of the less obvious subroutines in Trivial Trivia. I'll emphasize random-access disk I/O—and with 14 random-access data files, Trivial Trivia may not be so trivial after all.

SPECIFICATIONS

A plus 3000 is a complete, self-contained computer based on the popular 6502A microprocessor and can tap into the tremendous software library of Apple II. Features include 192K Bytes RAM, 32KB Enhanced Microsoft BASIC, 80 column text, 560H X 192V color graphic display, 81 key sculptured keyboard and high efficiency switching power supply. Also included as standard are Centronics bus printer interface, Cassette interface, 4 channel sound generator, and 51/4 Apple Compatible Disk Drive.

· TEXT

- 40 columns X 24 rows or 80 columns X 24 rows software selectable
- 5 X 7 characters in 7 X 8 matrix.
- Upper and lower case characters.
- One of Eight colors for characters/graphics and background, Red, Green, Blue, Cyan, Magenta, Yellow, Black and White.
- Character set with normal, inverse and flashing capabilities.

. GRAPHICS

- 280H X 192V 6 colors Black, White, Violet, Green, Blue, Orange.
- 280H X 192V 8 colors bit image Black, White, Red, Green, Blue, Cyan, Magenta, Yellow.
- 560H X 192V 6 colors Black, White, Violet, Green, Blue, Orange. (High resolution color monitor required)

SEE FOR

Visible PASCAL

Visible PASCAL is the first interactive learning tool that teaches you PASCAL by allowing you to see the results of your program as you develop it.

With the help of PASPAL™, a powerful interpreter which guides the user through each step, Visible PASCAL incorporates graphics, word processing and music as learning aids.

Developed by Charles E. Hughes and J. Michael Moshell of the Gentleware Corporation, Visible PASCAL offers 56 example programs you can run immediately, or you can design your own productions with 24 predrawn characters. Create your own characters with the artist program. Animate them. Score your story by adding a "soundtrack" through the Musique function.

All that is needed is an Apple * II (with language card), II+, Ilc or lle with at least 64K RAM. Game paddles or joysticks are recommended, though not required except for the Artist

Visible PASCAL \$59.95 ISBN 0471-88820-6

Examine the documentation only FREE for 15 days. Either keep your Visible PASCAL and return the accompanying invoice with your payment (including postage and handling, plus local sales tax) or return it within 15 days. without further obligation.

Note: Returns will not be accepted if the seal covering the program disk is broken.

Diversi-DOStm Still The Best!

The top-rated DOS 3.3 enhancement program. Lots of extras! DOS Mover frees up 10K memory. Includes new insert/delete mode, improved BASIC listings, keyboard MACROS, wildcard filenames, text file printer, keyboard/print buffers, fast garbage collection, and MORE! Works on Apple //c, //e, or 64K II+.

RAM Disk Emulator Now Included Use the extra 64K in the //c or //e extended 80-column card as a high-speed pseudo-disk drive. Also works with most 128K cards in slot 1-7.

Back-up Your Floppy with **Diversi-Copy**tm

The FASTEST way to copy (or format) unprotected DOS 3.3, ProDOS, Pascal or CP/M disks.

Great for Apple //c! Saves over 2 minutes per copy, and eliminates those annoying disk re-insertions.

Verifies every byte, so you know your copies are good.

Shows motor speed on each track, eliminating a major source of errors.

Mass produces 1 copy every 18-20 seconds (may require extra 128K).

Works on all Apple II compatibles.

Now Apple giant leap forward

Introducing
Viewtron.
The new service
that's easier to use,
and faster to operate.
At a price
you may never
see again.

Viewtron represents the newest, most advanced generation of on-line services. And it's less expensive to buy, less expensive to use. It's a complete service that includes information, shopping, home banking, messaging, air fares, schedules, and much more.

Viewtron is so much easier to use than other services because its sophisticated navigational structure uses everyday English keywords rather than arbitrary meaningless codes. Our system makes it faster getting around. So it saves you time. And that saves you money.

For instance, just type "stocks," "encyclopedia," or "news" when you want the latest stock market data, educational material, or up-to-the-minute news. You can even create your own keywords.

A single button can get you what you need.

With the touch of one button, you access a keyword file that lets you quickly review information which is particularly important to you. Like the current price of your securities, or your favorite team's stats and scores, or news in your career field.

Easy on the eyes.

Viewtron is easier to read because the words don't scroll up from the bottom like other services. They fill the screen from the top down, a page at a time. Just the way you normally read.

What's more, Viewtron lets you talk to other computer owners across the country, join clubs, carry on CB chatter, and catch the bulletin boards.

Pay only for what you use.

Viewtron charges no subscription fee and no monthly minimum. You pay only for what you use. Just 9 cents a minute weekday nights (after 6 pm) and weekends; 22 cents a minute weekdays.* And unlike other services, we don't charge extra if you use a 1200-baud modem.

You can access Viewtron on any of three communications networks. UNINET® GTE Telenet® or TYMNET® (A local call for most people.)

owners can take a in on-line services.

Limited trial offer!
FREE HOUR of Viewtron
when you buy a Starter Kit
at low introductory price.
Only \$9.95.

Just mail the coupon or call. You'll get a free hour of Viewtron.** Plus communications software and an easy-to-understand user's guide. Just \$9.95. With money back guarantee.

If you need a modem – rejoice! Get Viewtron and a modem for just \$99.95. (A \$179 value.)

An unbeatable deal. An unbelievably low price for a modem, and the software is free. Get Viewtron, plus a 300-baud Anchor Mark X. The modem plugs into your Apple II series machine and amazingly enough at this low price even has Auto-Dial and Auto-Answer. Satisfaction guaranteed. Order now.

LEAP ON THIS DEAL WHILE YOU CAN.

RIGHT OF ASSEMBLY

The Basics of Assembly

by Roger Wagner

Welcome back! Last month I offered a general overview of computer languages and some of the fundamental differences between Applesoft and machine language. In addition, I presented a collection of simple machine-language CALLs you can use from within your own programs to extend the usual capabilities of Applesoft.

If you haven't already decided to do so, I recommend you keep back issues of this column as references, since I will, from time to time, refer to material presented in them. If you missed the last one, though, don't worry—the best is yet to come.

PEEKs, POKEs, and CALLs

To refresh your memory, recall that in machine language a "program" consists of a series of numbers stored in successive memory locations. The 6502 microprocessor "runs" a machine-language program by scanning this series of numbers and performing various operations depending on the value it finds in each successive memory location.

Applesoft BASIC includes several commands that let it deal with individual memory locations and run machine-language subroutines from within any Applesoft program. The Applesoft command POKE, for instance, stores a value in the range of zero to 255 in a given memory location. The command PEEK lets you examine any memory location to see the number value already stored there.

Another command, CALL, directs the 6502 to start running a machine-language program at a specified address. When the computer encounters the machine-language equivalent of a RETURN, program control returns to the next statement in the Applesoft program.

Before you begin to program, build a framework of assembly-language fundamentals—hex numbers, assemblers, the Monitor, and more.

A Test Program

To see how a BASIC program can create and then run a short machine-language program, enter the lines of BASIC in **Listing 1**. When you run this program, the screen should clear and the letter A appear in the center of the screen. The simple explanation of how this program works is to say that the 6502 microprocessor in your Apple understands the number series 169,193,141,188,5,96 to mean "print the letter A in the middle of the screen."

You can probably guess that 96 is the number code equivalent to BA-SIC's RETURN command. You could look in a technical reference manual to determine the meaning behind the other values, but an easier way exists—use the built-in *Monitor* present in every Apple II computer. For many microcomputers, the word "Monitor"

Listing 1. A BASIC program that creates and runs a machine-language program.

10 HOME

20 POKE 768,169:POKE 769,193

30 POKE 770,141:POKE 771,188:POKE 772.5

40 POKE 773,96

50 CALL 768

means a sort of mini-language used at the machine level to make life easier when dealing with machine-language programs and data.

To enter the Monitor voluntarily, type in CALL – 151 and press the return key. The Applesoft prompt (]) should change to an asterisk (*), which indicates you are officially "in" the Monitor—that is, the computer no longer recognizes Applesoft commands; it recognizes Monitor commands instead. You can try typing PRINT at this point to confirm this (your computer should just beep at you), but don't try typing anything else randomly just yet.

One of the initial uses of the Monitor lies in its ability to show you the contents of a range of memory locations. To examine the part of memory that holds the machine-language program the BASIC program POKEd into memory, type in 300.305 and press the return key.

The screen should display: 300 - A9 C1 8D BC 05 60

At this point, you may justifiably say, "Wait a minute! These don't look like the same numbers my BASIC program used, and I thought it started at location 768, not 300."

You're almost right. The numbers don't look the same, but believe it or not, they do represent those values.

Hexes and Other Curses

In explaining the numbering systems computers use, people who write books and columns on machine-language programming just love to start talking about how we count by sets of ten because we have ten fingers. Ten is called the *base* of our numbering system because it's the foundation for the way we count out a quantity of some item.

Regardless of why you think we count by tens, it's true that, in a mathematical sense, the base for a counting system can be any number

Superstars aren't just the best in their fields. They're the best, year after year. In the wide world of sports simulations, SSI's COMPUTER QUARTERBACK™ and COMPUTER BASEBALL™ stand out as true superstars. To date, tens of thousands of enthusiastic fans and dozens of magazine reviewers alike have cheered their superb display of realism and excitement. By consistently outplaying the competition, our games stand head and shoulders above the crowd.

If you're scouting for the best football and baseball strategy games around, take a good look at ours - the ones with the proven performance. You'll know these are the superstars you want to play on your computer. Sign them up at your local computer/software or game store today!

If there are no convenient stores near you, VISA & M/C holders can order these \$39.95 games direct by calling 800-227-1617, x335 (toll free). In California, 800-772-3545, x335.

you want. In the computer, for various electrical and logical reasons I won't bore you with here (I've always hated tutorials that made me wade through a lot of number theory just to write a little program), your Apple computer likes to count by twos at the machine level of operation.

This brings me back to the Monitor. Applesoft contains 12K of machinelanguage routines to support the more than 100 BASIC commands. The Monitor has just 2K of space in which to create its commands, and it has to take care of things like reading the keyboard and managing the screen while it's at it, as well. Therefore, when the creators of Applesoft came up with the routines to print the numbers stored in a given memory location (or decode numbers you type in), it was much easier to deal with these numbers in a number system based on 16 (a multiple of two) than in a system based on ten. This base-16 number system is called the hexadecimal system. (Most people just call it "hex" for short.)

Now it really isn't necessary for you to be an expert in counting in base 16 to be able to use the hex numbers on your screen, but a brief explanation will make things a little easier. When counting in base 10, you count from one to nine, then use a second position (for the 1) to create the next number (10). In a sense, you're just putting a limit on the number of "legal" symbols for a given digit position. When counting from ten to 99, you again limit yourself to the digits one through nine, and thus have to move to 100 for the value after 99.

The people who made up the counting system for hex numbers just said, "Hey, when we get to nine, why not keep going with some new symbols?" When you count in hex, you start as you did before—from zero to nine-but, when you get to the number to follow nine, you just use a few letters of the alphabet-A to F.

Allowing letters up to the letter F lets you count to what would normally be 15 using just one digit position (or should we now call it a "hexit"?). Well, in any case, when you continue, you do what you did in base 10namely, add a one to the left to mark a set of 16, and keep counting: F, 10, 11, 12, . . .

And, as before, when you use up the characters on the right again, you repeat the pattern:

18, 19, 1A, 1B, 1C, 1D, 1E, 1F, 20, 21, 22, . .

Now remember, don't get worried about being a math whiz at this point. All you need to do is believe that the symbol 1B is as legitimate a way of writing some number quantity as 27 is. In fact, in this case they're equivalent (1B [hex] = $1 \times 16 + 11 =$ 27 [decimal]).

If you count high enough in hex numbers, the symbols run out again, and you'll have to add another number position:

98, 99, 9A, 9B, 9C, 9D, 9E, 9F, A0, A1, A2, ..., F8, F9, FA, FB, FC, FD, FE, FF, 100, 101, 102, . . .

Some people get nervous at this point because they're not used to saying 1A as a number (it works in hotels, doesn't it?), or they're not sure that 100 means one hundred anymore. Actually, as long as the other person knows that you're talking hex addresses or numbers, saying one hundred, or even bee-hundred (for B00) is just fine.

To avoid confusion in written text, however, a dollar sign is usually put in front of hex numbers (for example, \$B00), so someone can tell at a glance which numbering system you're using.

Well now, back to that list of numbers you were looking at in the Monitor:

300- A9 C1 8D BC 05 60

To verify these numbers quickly, let's look at a few. To convert the 300, you need to know that the third number position must be multiplied by 256 to convert it to base 10: 3 x 256 = 768. Yep, that's your starting

For the A9, remember that A comes after 9 in the hex counting system. That means A is just like a regular 10: $10 \times 16 + 9 = 169$. That checks with the first number POKEd into memory on line 20 of your BASIC program. The 05 near the end is easy. The 60 at the very end checks out with $6 \times 16 = 96$, the value I said tells the 6502 to return from the program.

POKES, PEEKS, and CALLS in the Monitor

You know the way BASIC lets you change and examine memory locations, and how to run a machine-language program. Well, these operations are present in the Monitor, too.

You've seen how to examine a

22 unprotected disks for your Apple® II. Each under \$60. Call now for a free catalog.

Summer/Fall 1985 Catalog: Dial toll free 1-800-227-3800 ext. 1607 (24 hours).

EXTRA KTM

Put your 128K to work! Even with 128K of memory, Applesoft programs, pictures and variables only access 48K. The Extra K disk lets you utilize ALL of your 128K speed, capacity & muscle.

Extra Variables: Your Applesoft programs can function undisturbed in main memory while all vari bles, strings and other data reside in your extra 64K

Extra Apple: Have TWO 64K APPLES and programs in memory and switch between them at will.
You can even have a ProDOS Apple and a DOS 3.3 Apple in memory and swap files back and forth.

Extra-Fast Coples: Extra K's nibble copier es and verifies unprotected disks in 35 seconds Extra Features: Create new "dual personality ProDOS/3.3 disks. MANY MORE 128K UTILITIES

Extra Screens: Store all kinds of images in memory and display any one (all or part) instantly

Call several pictures per second to the scre

BEAGLE GRAPHICS \$59.95 (Apple IIc or 128K IIe: DOS 3.3 & ProDOS)

Double Hi-Res: Access 16 hi-res colors and 560 (horizontal) x 192 (vertical) pixels (*twice* normal

For the Artist Draw, fill and label double hi-res

PRO-BYTER MANAGEMENT D CODET

ByteZap Pro: All NEW-Inspect ProDOS and DOS 3.3 disks at the byte level. Make changes and disk/program repairs that are normally impossible. Disk Search: Find any word or phrase on a disk or in a specified file. Repair zapped disk bytes that might cause malfunction. Instant disk maps too. Customize Disks: Easy instructions show how to make changes to disks, programs, and DOS itself

Machine Language Sort One CALL in an Applesoft program will alphabetize a list of words—super-fast! Sorts string-arrays—A\$(1), A\$(2), etc.

Converter: Changes any Applesoft program line to machine code that can be executed with a CALL.

Text Typer. See or print ProDOS text files immediately without having to boot your word processor.

More: Put time & date of save in your catalogs. Catalog ALL directories on any ProDOS disk. Make any Applesoft command work like any other...

Machine Language Editor: Type in programs from magazines, and insert and delete at will (no mach. lang. knowledge required). 2-way-scroll memory scanner too. Very useful & educational.

Plus ALL-NEW APPLE TIPS! How to use memory like an extra disk drive. How to disable the LIST command so it says "File Locked", How to disable to swap A^{LY} command. How to rename "Startup", How to Arsonalize ProDOS catalogs...

\$49.95 (any version of Apple II: DOS 3.3 & ProDOS)

THE Apple Program Editor: GPLE is our "Global Program Line Editor", *THE* most popular, efficient way to edit Applesoft programs. GPLE works like a word processor for Basic program lines.

Insert and Delete: Now you can quickly make changes to your programs. No more awkward "escape-editing" to make changes. No more hassles with extra spaces in quote statements. No more slow "cursor-tracing" to the end of a line.

Search and Replace: Find every occurrence of a string or variable in your programs. Or replace any word with any other. For example, change all X's to ABC's, or all "HORSE" strings to "COW".

Function Keys: Define your own Apple "function keys". For example, ESC-1 can Catalog drive 1, ESC-N can clear the screen and type your name and address, etc. Customize your Apple with a set of functions that perform any set of tasks you want.

Program Packer. D Code squeezes wasted and unused bytes out of Applesoft programs, saving valuable memory and increasing speed & efficiency

Automatically combine program lines, shorten variable names and/or remove REMarks. Uncover wasted program lines that can't possibly be executed.

Auto-Proofreader: Typing errors are caught as you type, and before someone runs your pro-gram. Or you can simply type "CHECK" to scan an entire program and uncover potential crashes.

Super-Trace: When a program stops or crashes, type "DUMP" to see the last 10-10,000 statements and line numbers that were executed, in the order executed-an instant program history.

'Live" tracing too, with each executing statement, line no. and selected variable value in window at the bottom of screen.

runs up here. Lines & VARIABLES traced down here. Breakpoints: D Code lets you set up de-bug

Your program

"breakpoints" so your program stops when you want it to. For example, you can ask that your program be stopped when X gets set to 99, or the 3rd time a particular statement is encountered.

Lightning-Fast Find! Find strings & variables fast—large programs searched in about 2 secon.
This feature alone is worth the price of D Code.

GPLE Compatible: D Code remains "transparent" to your programs and is fully-compatible with Beagle's GPLE, Double-Take, ProntoDOS, etc.

PRONTO-DOS™

Triple-speed DOS 3.3: ProntoDOS lets you load and save files at three-times normal spe-Hi-res images, for example, load in under 3 seconds

More memory & disk space: Create highspeed bootable disks with 15 extra sectors of space Move DOS 3.3 (if 64K) for an extra 10K of memory

TYPE command: Displays text file contents.

TRIPLE-DUMP™

Print any Apple Image: Triple-Dump lets your dot matrix graphics-capable printer print:

1. Hi-Res and Double Hi-Res graphics

2. Lo-Res and Double Lo-Res graphics
3. 40- and 80-Column text screen text.

All kinds of Apple images can be transfered to your printer with absolutely no programming knowledge.

OR you can call Triple-Dump's print routines from within your own Applesoft Basic programs.

Special Effects: Triple-Dump lets you select m a full range of special graphic effects: crop, ate, magnify, compress, adjust density, etc.

GIANT BANNERS too: Print big signs and sages (81/2" high letters) on ANY kind of printer

APPLE MECHANIC

Hi-Res Shape Animation: Your drawings are converted into "shape tables" so your programs can perform animation with Apple's built-in Draw & Xdraw commands. List and Learn disk demos teach how to create your own animated hi-res programs.

"Use Apple Mechanic"

HI-Res Display Type: SIX proportionally spaced hi-res screen-display fonts (both large and small) are included on the Apple Mechanic disk—

26 additional fonts available on our Apple Mechanic Typefaces™ disk (\$20.00).

memory location—type in the addresses separated by a period and press the return key. If you want to look at just a single location, type in a single hex address. For example, to examine location \$300, you can type 300 and press the return key.

The screen should print:

300- A9

Note that the Monitor doesn't display a dollar sign; it expects only hex values, so a dollar sign isn't needed.

If you want to print several different locations, separate each address value by a space. For example, type in 300 302 304 and press the return key.

The screen should print:

300- A9

302-8D

304-05

To do the equivalent of BASIC's POKE, type the address followed by a colon. For example, to change location \$301, type in 301: C2 and press the return key. Now type 301 and press the return key.

Listing 2. Assembly-language program. The first column shows memory addresses; the second, object code; the third, source code.

0300-	A9 C2	LDA #\$C2
0302-	8D BC 05	STA \$05BC
0305-	60	RTS
0306-	??	
0307-	??	
0308-	??	

The screen should print: 301- C2

The value has been changed!

Now what about the equivalent of a CALL statement? In the Monitor, all commands are single letters rather than complete words, and they follow the address of interest. To run your program from the Monitor, type in 300G and press the return key. (Can we do away with this reminder now?)

The letter B should now appear in the center of your screen. (Remember, you did change the program.) The letter G following the address 300 stands for Go and tells the Monitor to run a machine-language program at the specified address.

The Monitor LIST Command

You're probably thinking by now that if you have to deal entirely with numbers to do machine-language programming, it's going to get tiresome very fast—and you're right.

To list a machine-language program, the monitor has a nifty command. Type in 300L.

Wow! The screen should now list 20 lines of strange stuff that looks something like **Listing 2**.

L is the Monitor LIST command; it tells the Monitor to display the contents of memory. Since I'm using the term "assembly language" for the first time, you might well ask what the difference is between machine language and assembly language.

Well, once upon a time, people programmed computers by entering pure numbers to tell the microprocessor what to do for a given program. (That's probably where programming got a bad name in the first place.) Then one day, someone said, "Why don't we make up letter codes for these commands, and let the computer figure out the right numbers to use?" And they did.

Since programmers were very memory-conscious at the time (the computer's memory, not theirs—in 1978 16K of RAM for an Apple cost \$300), they used *mnemonics*, short abbreviations for words. Actually, a mnemonic is an abbreviation that sounds like the words for which it stands.

Thus, at address \$305, you see that the Monitor has translated the \$60 to RTS—ReTurn from Subroutine. When creating a program, it's a lot easier to remember RTS than \$60.

A program that takes a list of mnemonic codes and translates them into the proper series of numbers in memory is called an assembler. The listing the programmer types in is the source listing; it corresponds to the text in the rightmost column of the Monitor listing.

The numbers the assembler puts into memory are the *object code*; they correspond to the numbers in the columns shown in **Listing 2**. The numbers at the far left are the addresses of the numbers that make up the object code, and are displayed for convenience only.

When you BLOAD or BSAVE a binary file that is a machine-language

RIGHT OF ASSEMBLY

program, you are loading or saving just that series of numbers that makes up the object code for a machine-language program.

In the technical sense, then, assembly language is the programming of the computer by typing in the mnemonic codes, which an assembler then assembles, or translates into numbers. Machine-language programming is putting pure numbers directly into memory without the aid of an assembler. The end result is the same, though—a machine-language program.

As it happens, most people use the two terms as they use "porpoise" and "dolphin." The words really mean two different things, but in general conversation it's not that important (my apologies to marine biologists).

Nobody really directly writes machine-language programs of any size anymore (an assembler is the only way to go—imagine writing BASIC by POKEing each value into memory), but many people use the terms machine-language programming and assembly-language programming interchangeably.

The Accumulator

Now, back to the program in progress. In **Listing 2**, the first pair of numbers in memory is translated as LDA #\$C2. LDA is a mnemonic that stands for "LoaD Accumulator." The accumulator is rather like the 6502's very own memory location, set apart from the other 64K of memory addresses. The accumulator is called a register and is used as a temporary location to hold various number values.

In this example, LDA #\$C2 tells the 6502 to load the accumulator with the value \$C2. The number sign (#) indicates that the actual value \$C2 is to be used. If the number sign had been omitted, the 6502 would instead look at *location* \$C2 and take the content of that location and put it into the accumulator. In this program, though, the value \$C2 corresponds to the letter B, the specific value you want to use.

The program lists the next 3 bytes as STA \$05BC and tells the 6502 to store the contents of the accumulator in memory location \$5BC. STA stands for "STore Accumulator."

Memory location \$5BC is a part of the range of memory the computer uses to make up the text-screen display. By altering any location in this memory range, you can make any character appear on the screen.

Conclusions

Of all the columns that will make up this series, this one by itself probably has the largest number of new ideas you'll ever come across at once. In this single column, you've learned about hex numbering, assemblers, the Monitor, Monitor commands, the 6502 accumulator register, and more.

In learning any new subject, one of the most important steps is to build a framework into which you can incorporate each new fact. This column has provided the key elements that will make up that framework for future discussions. It's a lot to comprehend all at once, and you shouldn't worry if it seems a little much right now. As you go on, the pieces will fit together better all the time.

For now, you may want to list different parts of memory to see what kinds of program instructions you can find. The area from \$D000 to \$FFFF is quite interesting. Other areas may list as question marks. This means that the computer cannot interpret the numbers there as a 6502 program. This makes sense, though. When you turn on the computer, a lot of memory starts out with somewhat random values. In addition, the data an Applesoft program stores as variables. for example, is just that-data. Data does not a program make, and the Monitor LIST command doesn't list that data in any intelligible way. Feel free to explore, though; you'll become comfortable with the Monitor and start to see patterns in the way things work.

In the meantime, you may want to start looking around for information on a good assembler. In my next column, I'll discuss the "mini-assembler" available on most Apples. But, within another month, you'll need a more powerful assembler to enter the listings presented in this column. Next month, I'll also give some tips on what to look for in an assembler, and a list of commonly available products.

Roger Wagner is the author of Assembly Line: the Book and is president of Roger Wagner Publishing, the publisher of Merlin and Merlin Pro assemblers. Write to Roger at Roger Wagner Publishing, 10761 Woodside Avenue, Suite E, P.O. Box 582, Santee, CA 92071.

Dept. P.R.

Ann Arbor, Mi. 48106

What every Apple II+ and IIe user should ask before buying the "Sider" 10 MB hard disk:

When a company offers a superior quality 10 megabyte Winchester hard disk for only \$695, it's bound to raise a few eyebrows... and a lot of questions. The fact is, you're probably already wondering "Can I really get a 10 megabyte hard disk that's *reliable* for only \$695?" The answer is: ABSOLUTELY...when you choose the Sider from First Class Peripherals.

What's so great about the Sider?

For starters, the Sider lets you boot your *Apple II*+ or *IIe* directly off the hard disk—unlike some other Winchester subsystems. Rebooting is also troublefree. And the disk is partitionable, allowing you to allocate space to four operating systems on the same disk. The Sider supports: Apple DOS 3.3; Pro DOS™; Apple Pascal; and CP/M®

What's more, a small "footprint" lets you incorporate the compact Sider into your existing computer set-up with ease.

In addition, with the Sider, you not only pay far less for the subsystem, you also save money on installation. Because, unlike other 10 MB systems that require the purchase of expensive "extras," the Sider is *plug and play*. Everything you need is provided, including cables, host adaptor, installation software and manual.

What makes it so reliable?

To start, the Sider is manufactured, and sold exclusively, by First Class Peripherals, an innovative computer company which is backed by Xebec. The computer industry's leading manufacturer of disk controllers, Xebec has over a decade of experience serving customers like IBM, Toshiba, Texas Instruments and Hewlett Packard. It's this kind of expertise that helps assure the Sider's performance.

Special design features further enhance reliability. The Sider's controller is the field-proven, industry standard Xebec S1410A. And Xebec's 3200 drive tester, the

Apple and Pro DOS are trademarks of Apple Computer, Inc. CP/M is a registered trademark of Digital Research, Inc.

"Only \$695?"

\$595 Oct. 1- Dec. 31, 1985 toughest in the industry, ensures that the Sider will operate reliably. One more assurance of the \$695 Sider's quality: it's UL Approved and FCC Class B rated.

But why is it only \$695?

You pay less for the Sider than for other 10 MB hard disks simply because you're paying for the superior quality components inside the unit, not for a lot of retail overhead costs. Since First Class Peripherals sells direct, you avoid dealer and dis-

tribution expenses, and pay only for the product.

What about a guarantee?

Like many experienced Apple users, you may be reluctant to buy a hard disk priced at only \$695 without fireing for yourself how it performs. To why First Class Peripherals offers you a reassuring, money-back guarantee that eliminates any risk on your part. Simply order the Sider and use it for 15 days. Then, if you're not entirely satisfied, return it and receive a full refund—no questions asked.

The Sider also comes with a full one-year limited warranty. Plus, there's a convenient, toll-free hotline you can call anytime you have a technical or service question, or need help.

Don't delay. Order the Sider now.

To receive the Sider 10 megabyte Winchester hard disk subsystem for only \$695, simply order using the coupon below. For faster service, order by phone and charge to your VISA, MasterCard or American Express. (You can also call us if you have any questions or technical concerns about the Sider. We'll see you get the help you need.) Call toll-free:

Juki 6300 Letter-Quality Daisywheel Printer

Juki Office Machine
23844 Hawthorne Boulevard, Suite 101
Torrance, CA 90503
Daisy-wheel printer

\$995

In this era of paperless offices and electronic mail, a letter-quality printer is something of an anachronism—today you need never make that fine—or permanent—an impression on your boss. But the Juki 6300 Daisywheel Printer can provide the quaintness you prefer if you appreciate living in the past.

The 6300 strikes a balance between electronic speed and old-fashioned quality. Letters roll out at 32 characters per second—according to the documentation—but more like 27 cps in the real world. If you shift the 6300 into overdrive and set the convenient DIP switches to Hammer Intensity High and Quality High, you decelerate to 21 cps. Put the hammer down to pursue top-quality manuscripts.

The din won't remind you of the print shop—it's a quiet machine. The folks at Juki might claim that the decibel level never exceeds 63, but you might just listen more carefully to the casual conversation you can share while the 6300 runs.

The 6300 is as quick out of the box as it is in the printing race. It takes less than an hour to unpack the machine, put in the 96-character daisy wheel

and the cartridge-type Diablo ribbon, and print your first page. The *User's Manual* clearly tells you how to set up the printer—a nice gesture by Juki, if a bit unrealistic, since the instructions are tucked inside the printer. Removal or replacement of ribbons or daisy wheels is really a snap—welcome to the modular world.

Only Diamonds Are Forever

Rumor has it that Juki printers last forever, and the Model 6300 appears likely to linger until it becomes as archaic as the Underwood. It weighs almost 31 pounds and sports only a couple of moving parts. Our review model survived the attack of an errant Irish editor on an oversized bicycle; yours should make it handily through the minor abuse of resumés and newsletters.

The Model 6300 can handle paper widths of up to 16 inches—a feature newsletter editors and other businesspeople will like. It also prints a maximum of 393 characters per line with proportional spacing, 197 in 15 pitch, 158 in 12, or 132 in everyday 10 pitch.

Replacement parts are no trouble—the Model 6300 uses standard Diablo daisy wheels and cartridge ribbons. Fabric and multistrike ribbons are also available. The parallel Centronics model and the RS-232C version of the 6300 are both standard.

Four membrane switches on the front panel control the Model 6300: Stop/Continue, Page Feed, Top of Form, and Line Feed. When you stop to change a ribbon or print wheel, the printhead automatically returns to the line at which you quit. It's a thinking printer in more than its bidirectional and logic-seeking speed. The DIP switches are inside, but they're easy to find and manipulate.

Classic Reading

Thankfully, the Juki 6300 *User's Manual* is as far behind the times as the printer: Instructions are in plain English, diagrams are simple and straightforward, and the illustrations and directions actually collaborate to ease installation and speed repair.

One chapter describes the interfacing, configuration, and installation procedures required for six different computers. Chapter 6, "The Model 6300 and Your Apple II Plus, //e, and //c," offers help with Apple Writer II, WordStar, VisiCalc, SuperCalc2, AppleWorks, and Bank Street Writer. The Apple

BUSINESS COMPUTERS

OF PETERBOROUGH

ORDERS ONLY 800-845-3003

Your computer can talk in your own voice. Not a synthesizer but a true digitizer that records your natural voice quality—and in any language or accent. Words and phrases can be expanded without limit from disk.

And it will understand what you say. A real word recognizer for groups of 32 words or phrases with unlimited expansion from disk memory. Now you can have a two way conversation with your computer!

Easy for the beginning programmer with new BASIC commands. Machine language programs and memory locations for the more experienced software author.

Exciting Music Bonus lets you hum or whistle to write and perform. Notes literally scroll by **as you hum!** Your composition can be edited, saved, and printed out. You don't have to know one note from another in order to write and compose!

Based upon new technologies invented by COVOX. One low price buys you the complete system—even a voice controlled black-jack game! In addition, you will receive a subscription to COVOX NEWS, a periodic newsletter about speech technology, applications, new products, up-dates, and user contributions. You will never find a better value for your computer.

ONLY \$89.95 includes all hardware and software.

For telephone demonstration or additional information, call (503) 342-1271. FREE audio demo tape and brochure available.

Available from your dealer or by mail. When ordering by mail add 44.00 shipping and handling (10.00 for foreign, 0.00 Canada).

The Voice Master is available for the C64, C128, all Apple II's, and Atari 800, 800XL and 130XE. Specify model when ordering.

For Faster Service on Credit Card Orders only:

ORDER TOLL FREE 1-800-523-9230

REVIEWS

Writer II configuration, for example, is as simple as setting print destinations and a carriage return. The Model 6300 also allows for special features, such as bold and shadow print, underscoring, subscripts, and superscripts, that Apple Writer lacks.

Passing the Buck

Juki lags in support. The company suggests you take your problems to a local user group or back to your dealer. User groups are a great resource, but wouldn't you worry if Chrysler told you to join AAA or to call Ralph Nader when your Charger couldn't? The Juki staff in New Jersey is fine and friendly, but customer support isn't a priority—taking orders is.

A Juki printer breaks down less often than a Charger, though, and your warranty will cover parts and labor for one year. The word at Juki is that more servicepeople are in training, but if you live outside a major metropolitan area, as many old-fashioned people do, you'll need to do some shipping when something fails. But failure isn't likely.

A printer that costs \$995 isn't cheap. You're paying the equivalent of a //c price tag to write resumés that make you look as if you know how to type, or to compose love letters that don't look ghost-written—by R2-D2. The Model 6300 outperforms its little sibling 6000 (see *inCider*'s review, October 1985, p. 82) at three times the speed, twice the number of options—and three times the cost. It adds up—but if you insist on antiquated correspondence, why not do it with some style?

Presentation Graphics Any Apple II \$39.95

★ ★ Ease of set-up

★ Ease of use

Documentation

★ ★ ★ ★ Overall

The art of computerized presentation graphics has taken quantum strides in recent years. A typical presentation-graphics package now includes a range of graph types (usually line, scatter, bar, pie, and high charts) you can reproduce over an equally diverse and useful range of styles (stacked, mixed, and exploded). Add the ability to enter customized titles, axis labels, and legends, to name any other features you'd need. Does B/Graph measure up to

these standards? B/Graph does include these capabilities, but a certain lack of flexibility in their application may frustrate you in your efforts to use the program.

B/Graph is written in modules. The primary module is the graphing-entry section, which gives you a choice of line, point, or bar charts for the data you've typed in. I made the mistake of first running Apple Writer without shutting down my //e afterward for 30 seconds, as the manual recommends. Rebooting the B/Graph program disk worked fine until the chart appeared: the program printed an unrecognizable glob on the screen instead of a line graph.

The data entry itself is more important. You can enter two main titles, but the program limits them to 20 characters each. You can label individual datum, but each label can be no longer than eight characters. You must be very careful not to make a mistake. Pressing the left-arrow key with the cursor in the first character position in any field sends it to the left corner of the next line—totally disjointed from the field you're entering.

B/Graph can handle up to 100 data points per category (or factor, according to the manual), but you can only enter three categories per graph. Furthermore, B/Graph won't accept more data elements for the second or third categories than you've already entered for the first. Even updating the information can't increase the amount.

In contrast to this lack of flexibility, B/Graph can import data from DIF or ASCII files—an excellent feature not found in many charting programs. When I finished entering the data, I found the graphs actually looked quite nice, even though text appeared in 40-column mode. I discovered I could fill a line graph with one keystroke, turning it into an area chart, or switch to another type of graph just as easily. Unfortunately, the legend identifying the key functions was remanded to a previous screen—out of sight when I needed it.

Additional modules plot your data in pie-chart format and perform statistical functions, all efficiently executed. The program performs correctly, and when you deal with the data in pre-existing graph files, you avoid the entry limitations.

One of B/Graph's more striking features is its slide-show capability. With very little effort, I organized picture files of my graphs into a continuous "slide" display on the screen. My only objection to this feature is that the program's authors decided to call it "imaging," a term not normally used to describe this type of work.

In fact, that same practice accounts for about 30 percent of my objections to B/Graph. The program calls scatter graphs "point" graphs, because the "S" on the menu stands for segmented bar charts (which are actually stacked bar charts). Those words aren't necessarily wrong, but they're not the usual terms for those types of graphs.

C·VUE™

Flat Panel Display - portable, lightweight, attachable, adjustable flat panel display system for the Apple IIc Computer.

C-VUE FLAT PANEL DISPLAY \$475.00

C-VUE FEATURES:

- Full 80 character by 24 line display, including graphics.
- Display panel adjust to any viewing angle.
- Contrast ad justment control.
- Display panel folds down on top of the Apple IIc Computer.
- C-VUE display and Apple IIc easily fit into the Apple IIc carrying case.
- C-VUE display system is easily attached or removed from the Apple IIc.
- C-VUE offers excellent contrast and greater viewing area.

To order your C-VUE Flat Panel Display System for the Apple IIc call Sun Star Industries, Inc. 1-800-821-7493 Ext. 404. In AZ call (602) 968-0373.

All orders are shipped UPS C.O.D. unless payment is made by VISA or MasterCard. Add 2% for shipping and handling. Purchase orders will be accepted subject to credit approval. Arizona residents add sales tax of 6%.

Canadian Orders: Price is subject to currency fluctuations. Call for price.

International Orders: All orders placed for delivery outside the Continental United States must be pre-paid by certified check only. Add 3% for shipping and handling. Educational Discounts are available to qualified educational institutions.

VISA and MasterCard accepted.

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

The Versabusiness™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VersaReceivables™

VERSARCEUVABLES" is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARCEUVABLES" prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II" and VERSAINVENTORY.

VERSAPAYABLES" is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES" maintains a complete record on each vendor, prints checks, check registers, youchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES", you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL** \$99.95

VERSAPAYROLL** is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER I** system.

VERSAINVENTORY** \$99.95

VERSAINVENTORY** is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY** keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARCETUABLES** system. VERSAINVENTORY** prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

50 N. PASCACK ROAD, SPRING VALLEY, N.Y. 10977

VersaLedger II™

VERSALEDGER II" is a complete accounting system that grows as your business grows. VERSALEDGER II" can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system without any additional software.

• VERSALEDGER II" gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),

• stores all check and general ledger information forever,

- prints tractor-feed checks,
 handles multiple checkbooks and general ledgers,
 prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account

VERSALEDGER II" comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II" manual will help you become quickly familiar with VERSALEDGER II", using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSA BUSINESS" module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSA BUSINESS" module, you may return it within 30 days for a refund. Manuals for any VERSA BUSINESS" module may be purchased for \$25 each, credited toward a later purchase of that module.

To Order:

Write or call Toll-free (800) 431-2818 (N.Y.S. residents call 914-425-1535)

REVIEWS

Compounding that problem are three other factors: B/Graph's inability to accept lowercase input; its support of only five basic types of printers through only three interface cards (Pkaso, Grappler, and Apple Dumpling); and its lack of support of any plotter (even though the Hewlett-Packard 7470A is almost a standard for charting). The manual still recommends the program for home and business use, despite all that.

B/Graph would have made a big splash in 1982. I'm certain the authors' background in APL (A Programming Language), statistics, and Atari programming are responsible for both the high points and low points of the program.

One line from the manual sums things up: "Use of a printer is optional." I can only reply, "I'll send you a chart of prospective B/Graph sales as soon as I clear up one small problem. While you can plug a monitor in at your office, I'm still looking for an 1100-mile extension cord for my Apple's video jack."

Bill O'Brien Fort Lee, NJ

Keyboarding Alpha-Pac

South-Western Publishing
Consumer/Professional Products Division
5101 Madison Road
Cincinnati, OH 45227

Typing instruction Apple II Plus or //e \$39.95

★ ★
Ease of set-up

★ ★
Documentation

Support
Overall

Anyone who's taken a typing class knows the quick brown fox jumped over the lazy dog, but many other people—including some long-time computer users—don't understand where to find home row. Although several computer "games" provide typing drills, few programs actually teach novices how to type. Keyboarding Alpha-Pac successfully tackles the task by avoiding the inherent pitfalls often found in these programs. Its graphics and animation are unobtrusive and attractive—without any gimmickry.

The program opens with written instructions followed by a graphics demonstration showing the correct way to sit at a desk and keyboard. The first lesson introduces you to the home-row keys (A, S, D, F, G, H, J, K, L, and semicolon) and the space bar. Although most of the lesson material follows in logical sequence, the program doesn't tell you about the significance of the return key until several min-

AlphaChart!

Don't pay more for less! The pictures shown above are examples of charts created with AlphaChart!, perhaps the most powerful and friendly Apple II chart program on the market. Within seconds, keyboard-entered data can be converted into picture-perfect ple or bar charts, in 26 user-selectable styles, automatically scaled and labelled, and in color or black and white. And if you want to customize your charts by adding extra artwork or text, or display them in a slide show, AlphaChart! comes with these valuable extras.....

A slide projector, for orchestrating automated, stand-alone screen presentations of a series of charts, timed and sequenced by the user. This program alone is worth the cost of the disk. It can be used with any graphics files created with any program.

A graphics editor, for alteration and embellishment of charts. Besides standard point-by-point sketching, built-in structures permit push-button creation of cirices, rectangles, lines, shape-table shapes, and exotic woven plaid patterns. If you wish to add clarifying text to the charts, you may type on the screen in several different letter font styles. For the artist, the graphics editor can also be used to sketch any imaginable scene from scratch.

A shape table editor, for creating special shapes for your charts. These shapes can also be used for animation in your programs! A sample animation program shows how to do it.

AlphaChart! includes a screen-dump program for printing your charts on paper. AlphaChart! is more! Just read what these people have to say about it...

"I noticed the advertisements for Spectral Graphics' AlphaChart! program and figured that, with a money-back guarantee, I would try it. Boy, am I glad I did! This is a fantastic program. You can master its many varied capabilities in less time that it would take to describe them. I would recommend it to everyone, even if you have absolutely no need for a graphing program. It's just fun to play with." S.A. Smith, San Bernadino, Calif. . . letter to SOFTALK, June, 1984, page 14.

"The software does much more than the advertisement suggests. Without question, this is among the best buys in software that I have ever come across, and certainly among the best written. It is extraordinarily easy to use, very well thought out, and priced to kill your competition (which I wish you every success in doing)." Anthony J. Scriffignano, North Caldwell, New Jersey.

"I have long been distressed by the lack of software available in the scientific academic community. At last there is a simple yet robust graphics program applicable for our purposes: AlphaChart!, by Spectral Graphics Software. Business folks and scientists alike will really appreciate how user-friendly it is; I was able to produce my first three-dimensional, multi-colored, labeled bar graph within five minutes of booting the disk-without reading my documentation. I would have had to pay a scientific illustrator much more than the whole program costs just to produce that one graph...you can't do without this gem." John B. Iverson, Richmond, Indiana...letter to SOFTALK, April, 1984, page 23.

ONLY \$29.95 Apple II + /IIe/IIc. Satisfaction guarantee or your money back (really!). Send a check or purchase order to SPECTRAL GRAPHICS SOFTWARE, 6333 Pacific Avenue, Dept. 256C, Stockton, California 95207. C.O.D. orders call toll free 1-800-826-2989. In California call 1-800-231-7316.

*TOP RATED IN A LEADING CONSUMER MAGAZINE.

Personal and company checks allow 3 weeks to clear. For Fast Delivery send cashier's check, certified check, or money order. Shipping—Software (\$3.00 minimum). C.O.D. add an additional \$2.00. Shipping—Hardware (please call 203-375-3860). Alaska, Hawaii, Canada, PO, APO, and FPO \$5.00 minimum. Foreign orders—\$15.00 minimum and 15% of all orders over \$100. Mastercard & Visa (include card no. and expiration date). Connecticut residents add 7.5% sales tax. We ship same day for most orders. Prices subject to change without notice. All returns must have a return authorization number. Call 203-375-3860 to obtain one before returning goods for replacement. Defective merchandise replaced with same item only. We do not guarantee compatibility. All sales are final.

utes after it's mentioned. This oversight isn't characteristic of the rest of the program, however. Keyboarding Alpha-Pac's written documentation, a four-page leaflet, is short, but adequate, given the program's clear on-screen self-documentation.

After you boot the program, a handful of text screens with diagrams appear. Press the return key to move past each screen, but don't go too fastthe program doesn't separate the instructions from the introduction with any graphics or machine-lanquage barrier. Keyboarding Alpha-Pac doesn't have a looping feature, so you must determine when you've mastered the keystrokes in each lesson.

Keyboarding Alpha-Pac comes on two disks containing nine lessons each. Lessons cover proper typing posture, basic key-strike and reach techniques, left and right shift keys, and letter, numerical, and punctuation placement. The program also includes review lessons.

Each lesson begins with a demonstration of the finger action necessary to strike specific keys. A smoothly animated drawing demonstrates the required keystroke. Keyboarding Alpha-Pac doesn't contain graphics for the sake of graphics; rather, it's a rare example of what well-handled graphics can do for an educational program.

Keyboarding Alpha-Pac's key-teaching sequence lets you type words and simple sentences early in the lessons and provides motivation for young learners. The first 15 lessons emphasize accuracy, and the program won't let you continue until you press the correct keys. In the last three lessons, the emphasis shifts to speed. Like the key sequence and the helpful graphics, this logical progression reflects the common sense behind the program.

Keyboarding Alpha-Pac calculates gross number of words per minute from your speed tests. You can select individual lessons from the menu and practice

those that give you difficulty.

I have just one complaint. South-Western Publishing doesn't publish its back-up policy, and there is no mention of replacement costs. Although the disks are write-protected, it isn't too difficult to make a copy with an off-the-shelf product.

The bottom line? Keyboarding Alpha-Pac works, it's thorough and well presented, and it's an excellent way-whether you're a beginner or seasoned computer user-to learn at your own pace how to type quickly and accurately.

E.R. Campbell Gloucester, Ontario

Editor's note: South-Western Publishing now offers a back-up and replacement disk for \$15.

C·VUE

Flat Panel Display System + The Prairie Power Portable System for the Apple IIc Computer = the affordable portable!

C-VUE FEATURES:

- Full 80 character by 24 line display, including graphics.
- Display panel adjust to any viewing angle.
- Contrast adjustment control
- Display panel folds on top of the Apple IIc Computer.
- C-VUE display system is easily attached or removed from the Apple IIc.
- C-VUE offers excellent contrast and greater viewing

PRAIRIE POWER Portable System Features:

- · Eight hours of portable power with fully rechargeable battery.
- Low voltage cutoff circuitry.
- Durable cordura case.
- · Locking security case with heavy duty zipper.

 • Disk and C-VUE storage
- pouch.
- · Padded carry handle and shoulder strap.
- · UPS for power security

C-VUE FLAT PANEL DISPLAY (Single Unit) PRAIRIE POWER SYSTEM (Single Unit) C-VUE AND PRAIRIE POWER (Combined Units)

\$475.00 \$189.00 \$595.00

Purchase the C-VUE and the PRAIRIE POWER SYSTEM together for a total price of \$595.00 and SAVE \$70.00 OFF of the suggested retail price of the units purchased separately.

To order your C-VUE Flat Panel Display and Prairie Power Portable System for the Apple IIc call ROGER COATS at 1-800-GET-C-VUE (438-2883) In CA call (619) 274-1253.

All orders are shipped UPS C.O.D. unless payment is made by VISA or MasterCard. Add 2% for shipping and handling. Purchase orders will be accepted subject to credit approval. Arizona residents add sales tax of 6%.

Canadian Orders: Price is subject to currency fluctuations. Call for price.

APPLE II+ OWNERS...YOU DON'T HAVE TO BE JEWISH TO LOVE

DAVKA! For all the thousands of Apple II+ owners who've been unable to run Appleworks, Davka, the world leader in Hebrew language software, comes to the rescue with ItWorks. ItWorks is simply the best software program available that makes your II+ Appleworks compatible. Just slip ItWorks into the disk drive and your trusty II+ will be able to smoothly run Apple's top-rated integrated software program. ItWorks will run with any II+ outfitted with an 80-column board and a minimum 64k of memory. In fact, ItWorks enables Appleworks to work with most memory boards available for the II+--128k, 256k and more! It's available for only \$39.50 from Davka. And, as a limited-time bonus, we're selling a combination package of ItWorks and Appleworks for just \$229! Make your II+ Appleworks-compatible with ItWorks...and you won't have to be Jewish to love Davka! To order call 1-800-621-8227

Visa, Mastercard, and American Express accepted.

MerlinPro Wizard's Toolbox **Database Toolbox** Chart 'n Graph Toolbox

Roger Wagner Publishing 10761 Woodside Avenue, Suite E Santee, CA 92071

Utilities

MerlinPro-\$99.95, Apple //e or //c, 128K Toolbox Series—\$39.95 each, any Apple II, 64K

 $\star\star\star$ Ease of set-up ★ ★ ★ ★ Ease of use $\star\star\star$ Documentation ★ ★ ★ ★ Support ★ ★ ★ ★ Overall

When it comes to program-execution speed, Applesoft BASIC is usually quite slow. Compilers speed up your efforts considerably, but machine language is really the only way to go. MerlinPro, an assembler package using ProDOS, is an updated version of Roger Wagner Publishing's Merlin MacroAssembler program. The revisions utilize the enhancements offered by ProDOS and the //e and //c with 128K.

Besides the MerlinPro assembler, Wagner has also issued three "Toolboxes" for Applesoft programmers, with a fourth coming soon. These packages are for the "lazy," "smart," or "efficient" programmer (take your pick) who not only doesn't like "reinventing the wheel" each time he or she sits down to write a program, but who also wants to tack a couple of machine-language routines onto his or her Applesoft program.

The Magic of MerlinPro

MerlinPro is capable of generating code for the 6502, 6502B, 65C02, and the 65802 "superchip," as well. The non-copy-protected program comes on three sides of two double-sided disks—one side for Merlin under ProDOS, one for Merlin under DOS 3.3, and one for a disassembler.

MerlinPro contains four interwoven, integrated modules. The first is called the Executive mode. It's the system's overseer, controlling all I/O and filemanagement functions, including saving and loading source and object code to disk and memory, and maintaining any text files you generate.

The second module is a text editor you can use to write source code. It uses more than 40 text-formatting and editing functions that make writing acceptable code easier. While you can use other text editors (such as WordStar, The Write Choice, or Screenwriter II) to write your source code, I found the process just as easy with MerlinPro's editing

REPS-TERRITORIES AVAILABLE

mode. It even automatically generates spacing and tabs for final assembly, a task that can be guite difficult with other programs. The text editor also includes insertion, deletion, and global search-andreplace routines.

The third module is the assembler, which transforms source code into object code. Besides the standard 6502 op (operation) codes, Merlin recognizes 50 pseudo-op codes, including the "Sweet 16" assembler codes. A "linker" program allows the assembly of very large programs, while maintaining an efficient pace. It also lets you tack on previously defined library routines, so you don't have to rewrite them or produce relocatable code.

The disassembler creates Merlin-like source-code files from any machine-language program, and a "complete" listing of Applesoft BASIC object code. Printing this program burns up a lot of paper and about three hours of time.

MerlinPro supports both 40- and 80-column video modes, as well as upper- and lowercase differentiation. The program modules are menu-driven and easy to use, once you know what you're doing. In assembling some small programs, I found Merlin to be well error-trapped and forgiving. It prompts you for corrections and gives you the location of the error and a clue to its nature. The assembly is tolerably fast, and whenever you endanger your source code, Merlin lets you know about it in ample time to avoid disaster.

Tools for Programming

The Wizard's Toolbox is the first of the Toolbox series. It consists of about 30 subroutines, called commands. These are general-purpose items, and include such things as a music-programming utility, a print-using command, a number of different highspeed I/O routines, some fast graphics-loading routines, shape-table commands, array searches, and GOTO/GOSUB routines.

The Database Toolbox contains more than 40 subroutines for data and array manipulation, including variables and strings, which allow you to perform fast sorts and searches and quicker read/write functions. (A few routines are included in both the Wizard's Toolbox and the Database Toolbox.)

The third package currently available is the Chart 'n Graph Toolbox, with 40 more options. This package sets up graphics interfaces and routines that let Applesoft programs plot pie, bar, or stacked charts, set up pull-down windows, split programs around Apple's hi-res pages, and draw 3-D graphs. They can also help you define labels; set up axes, tick marks, and grids; then plot and print your data. One side of the Toolbox disk handles standard hi-res capabilities, and the other takes care of Apple's double-hi-res mode.

Operation

The three Toolboxes are similar in operation. The machine-language subroutines are embedded as user-named Applesoft commands by using the Ampersand hook. The programs automatically add the necessary linking line to your BASIC program from the "workbench." Once the toolbox makes the link, the subroutines are simple to use. Each of the Toolbox programs also has a demo illustrating the function of each command. All commands seem to perform properly, except for one in the Wizard's Toolbox: Hitting the space bar increases the size (scaling) of a shape and is supposed to return it to its original state, but the latter function doesn't work efficiently.

Probably the worst thing about the Toolboxes is that the programs let you add unnecessary commands to your programs. Most of the Toolbox commands function equally well in either a ProDOS or a DOS 3.3 environment. Those that cannot are indicated as such.

Conclusions

None of the programs are copy-protected, and you can list all of them. You can even have some fun looking at subroutines with the disassembler.

The documentation for all the Toolbox packages is good. There are some typos, but none appear to be serious. Each volume explains the content of the program and the command syntaxes involved. They're not light reading, however, as they all deal with machine language, Apple machine hardware, and memory mapping.

The programs come with a 30-day money-back guarantee. Trial-size Toolboxes are available for the skeptics among you—but using any of them should soon convert you to a full-fledged Toolbox programmer. ■

Doug Landin-Young Fresno, CA

Editor's note: Roger Wagner of Roger Wagner Publishing reports that a fourth programmer's kit, the Video Toolbox, is now available for \$39.95. Watch for an upcoming review in inCider. He was also quick to point out that "the only redundancies are in the demos" where we found routines included in both the Wizard's and the Database Toolboxes. He does not claim that his docs are "light reading," but does insist that "you certainly don't need to know machine language or the Apple's interior design to use the Toolboxes."

NEW PRODUCTS

edited by Paul Statt

His Master's Voice

The Voice Master is three products in one package: a speech synthesizer, word-recognition module, and the new Voice Harp—a musical instrument you play by humming or whistling, making use of both the synthesizer and the product's word-recognition abilities. You can talk to your Apple, listen to it, or sing along if you choose. No license fee is required. If you write software, Voice Master will quickly have you using speech-and music-in your programs. With demo disks, software, audio digitizer, and microphone and earphone, the Voice Master sells for \$119.95, from Covox, 675-D Cinger Street, Eugene, OR 97402, (503) 342-1271. For more information circle number 363 on the Reader Service card.

The Great Curve

GraphWorks 1.2C puts pictures into AppleWorks. With GraphWorks you can plot four different types of graphs from AppleWorks spreadsheet data: stacked bar graphs, line graphs with optional plotter points, pie charts, or new interlaced bar graphs. Graph-Works uses ProDOS and the file-folder style of AppleWorks for easy integration, and sports a title editor, pop-up option window, and printouts in two sizes. GraphWorks is fast, but does not put graphs into your word processor. The price is \$79.95, from PBI Software, 1155B-H Chess Drive, Foster City, CA 94404. (415) 349-8765. For more information circle number 357 on the Reader Service card.

Waiting for Winter

Winter Games follows the success of 1984's Summer Olympics with a look ahead to the 1988 Winter competition—Apple version. Six of winter's toughest trials face you: ski jumping, ski biathlon and hotdogging, speed and freestyle events, and a hairpin bobsled race. The fine graphics and fast-paced action you loved in Summer Games are here, too, for \$29 from Epyx, 1043 Kiel Court, Sunnyvale, CA 94089, (408) 745-0700. For more information circle number 366 on the Reader Service card.

Movable Feast

ZBasic 3.0 uses the same programming commands on any computeryour code is completely portable. The IBM PC series, TRS-80 series, Macintosh, CP/M, and Apple II series of microcomputers share the same ZBasic syntax-if you learn ZBasic once, you'll never need to relearn it for another machine. ZBasic also has device-independent graphics commands, 54-digit numeric accuracy, a built-in interactive editor and compiler, a choice of alphanumeric labels or line numbers, and speed the developer says beats Turbo Pascal. ZBasic is available from Zedcor, 3438 North Country Club, Tucson, AZ 85716, (602) 795-6800. For more information circle number 356 on the Reader Service card.

Wait a Spell

Webster's New World Spelling Checker uses a data base of more than 110,000 words to correct simple misspellings, doubletyped words, and run-on words. The dictionary data base isn't troubled by hyphens, apostrophes, or contractions. It will find the correct spelling of a word even if you can only spell it the wrong way. The New World Spelling Checker is based on Webster's Misspeller's Dictionary and New World Dictionary. A New World Word Processor and New World Electronic Thesaurus are in the works. The New World Spelling Checker costs \$59.95, from Simon & Schuster Electronic Publishing, 1230 Avenue of the Americas, New York, NY 10020, (212) 245-6400. For more information circle number 362 on the Reader Service card.

Voice Master: voice synthesis and recognition all in one.

nouncements are provided solely as a service to our readers and do not constitute endorsement by inCider of any given product.

Quick Accounts

Quicken checking and finance software for the //c and //e lets you transfer data from your budget accounts into AppleWorks spreadsheets; you'll avoid typing rows and columns of figures twice. Quicken pays your bills (with your money), keeps track of expenses, and balances your bank statement. Quicken automates the procedure that's the heart of most small businesses: balancing the check register. Quicken fits AppleWorks neatly, sharing keystroke commands, filecard menus, as well as help screens and on-screen prompts. Quicken is priced at \$79, from Intuit, 540 University Avenue, Palo Alto, CA 94301, (415) 322-0573. For more information circle number 361 on the Reader Service card.

No Rainouts

You can play Hardball any time of the year-and watch the game as if it were on TV. Three-dimensional graphics puts you in centerfield to eye the pitcher and batter, or behind the plate to stare down the right- or left-field alley. The pitcher's repertoire includes fast balls, curve balls, screwballs, changeups, and sinkers. Managers call for bunts and stolen bases, make substitutions and position the fielders. The game is joystick-controlled, combining graphics, animation, and strategy in a simulation that rivals the televised event, for \$34.95, from Accolade, 20863 Stevens Creek Boulevard, Cupertino, CA 95014, (408) 446-5757. For more information circle number 358 on the Reader Service card.

Dial 1-800-FLOPPYS: \$99 brings more than a modem.

Compu-Lenz reduces monitor glare while doubling CRT character size. It's a combination Fresnel lens, glare filter, and universal holder you can use with any monitor. Attachment is a snap, and the Compu-Lenz adjusts to your personal needs. The suggested retail price is \$149.95 from Compu-Lenz, 220 Commerce Avenue, Port Richey, FL 33568, (813) 842-3231. For more information circle number 369 on the Reader Service card.

Secret Sharer

Apple Secrets can help you streamline your program design, speed up Applesoft, create special graphics effects, control DOS, and have more fun with the II series. The book contains more than 75 programs. If you hate to type, a disk is available. The softcover book with wire binding costs \$19.95; with the disk, \$29.95, from Nibble Publications, MicroSPARC, 45 Winthrop Street, Concord, MA 01742, (617) 371-1660. For more information circle number 365 on the Reader Service card.

Home Modem

The Smart Communications System starts making sense: Instead of sprinting between store and computer as you discover you need a modem, software, and special cables to go on line, you bring the whole package home at once. You need nothing but a telephone—the Smart Communications System includes all the hardware and software, a one-year warranty, a toll-free technicalsupport line, a user manual, free NewsNet time, membership in the Delphi on-line information service (see "Demystifying Delphi" in the June 1985 issue of inCider, pp. 26-30), and a free Apple Bulletin Board System. The cost is \$99. If you don't believe it, call 1-800-FLOPPYS, 22255 Greenfield Road, Southfield, MI 48075, (800) 356-7797. For more information circle number 352 on the Reader Service card.

Save storage costs with the MDD-640 Micro Disk Drive.

Baby Driver

The Tymac MDD-640 Micro Disk Drive keeps 640K of memory on a 31/2inch microfloppy disk. You can cut the time you spend switching disks, and store on a single disk the programs that once sprawled over several floppies. Micro disks are sturdier than 51/4inch floppies, and the MDD-640 uses precisioncalibrated drives and intellierence manual, retails for \$399, from Tymac Controls Corporation, 127 Main Street, Franklin, NJ 07416, (201) 827-4050. For more information circle number 351 on the Reader Service card.

What a Day That Was

Alice in Wonderland becomes you, or you become Alice, when you play the newest family interactive-adventure game from Windham Classics. The game is based on Lewis Carroll's fantastic tales of Alice in Wonderland and Through the Looking Glass. and features full-color hi-res graphics, original music,

humor, and excitement. Alice joins the other classics from Windham-Below the Root, Treasure Island, Swiss Family Robinson, and The Wizard of Oz-all available for \$26.95 each, from Windham Classics, One Kendall Square, Cambridge, MA 02139, (617) 494-1200. For more information circle number 359 on the Reader Service card.

Scientific & Graphic Software For Your Apple* II Computer

VIDICHART II-Enhanced data acquisition, processing and display of spectra, chromatograms, rate curves, etc. Fast plots, scrolling and zoom scaling on 4 data sets. Includes analog, digital and timer I/O (using ADALAB), fast math package, integrate, differentiate, auto commands...

VARICALC - Powerful equation solver for numerical modeling of complex physical, chemical and math processes. Solves for any variable in an equation with up to 19 variables, LOG, EXP and TRIG functions. Also evaluates 3 dependent equations and plots graphs. Interactively change variables via a joystick, arrow keys or loops. Supports IMI's ADALAB data acquisition card

QUICK-DRAFT—Design slides, diagrams, flowcharts, etc. Easily draw lines, arrows, arcs, ellipses, rectangles, polygons. Also features 19 text fonts, 22 colors, object macros, multi-screen scroll and print feature. \$ 50

QUICK-SHAPE-Create shape tables from any hi-res picture, edit enlarged images. Includes 18 shape tables for large text,

different fonts, math, music and electronic symbols \$ 25

Add \$2.50 shipping on all U.S. orders. VISA or MASTERCARD accepted.

Product Updates

- Amdek dealers will soon be packaging the RGB monitors Color 500, Color 600, and Color 700 with a Video-7 V-Color RGB card for the Apple //e and //c. Prices range from \$699 to \$898 for monitor and card.
- The Apple //e-compatible data-storage subsystems from TeamMate now operate under the DOS 3.3, Pascal, and CP/M operating systems, as well as the original ProDOS. The new software utility comes with Model 2203, 2206, 2210, 2213, and 2232 storage systems. Prices of this line are unchanged or de-
- The IIc System Clock from Applied Engineering looks a lot like the Time

- Trax Clock from Creative Peripherals Unlimited because it's the same unit. AE promises better software and a lower price.
- Look for Max-816, an expansion card that brings a 4-MHz 65816 chip and 256K of RAM to your Apple II, from Micro Magic of Millersville, Maryland.
- inCider regrets that we'll have to "wait 'til next year" for the Apple version of APBA Major League Baseball from Random House.
- Cauzin Systems of Stamford, Connecticut, has shown us an optical scanner that can read BASIC code from a piece of paper that wouldn't even make a good bookmark-a neat new device.

APPLE II, II+, IIe REFERENCE

At last, everything a programmer needs all in one book! This book has been written to assist all types of programmers from those who are just starting with BASIC and lores graphics to those who are into hi-res graphics, animation, and sound at the machine language level. The main purpose of this reference is to make programming easier and faster by including everything from BASIC commands, instruction sets, and number systems to a complete memory map which documents each address in each page of memory. Charts are also provided for quick reference. Includes many examples for easy learning and use. Order yours today. Send check or money order for \$19.95 (24.95 Cdn) to

Gone With the Garbage

Dear inCider.

I've been working on a program that uses a number of variables, and it's quite long. Lately, my program has been "disappearing." How can I keep this from happening?

Mark Jenison Box 206 Randall, IA 50231

Dear Mark:

Welcome to the wonderful world of Applesoft "garbage collection." Your problem results from Applesoft's dvnamic string allocation. Simply put, your Apple doesn't store the contents of string variables in a fixed location. Instead, whenever you create or assign a string in a program, Applesoft creates a new string in memory and merely updates the pointers to the new string. Consequently, the old values of your strings are bypassed, not overwritten. They continue to take up valuable memory space. Eventually, as you create and alter strings, you run out of memory, and Applesoft initiates its garbage-collection routine, which cleans out all the old strings.

The trouble with Applesoft garbage collection is that it's very slow. It seems to take forever to finish the job. One way to avoid the long, tedious routine is to force Applesoft into garbage collection by sprinkling a number of X = FRE(0) statements around your program. These statements break garbage collection into manageable chunks.

If you use ProDOS, a much faster alternative is available. Just use the statement PRINT CHR\$(4);"FRE" to clear out old strings fast. And remember that you can also find a good garbage-collection routine for DOS 3.3 Applesoft in the public domain.

Enhancement Blues

Dear inCider.

I have switched from an Apple II Plus to an enhanced //e. The VisiCalc program (identification number 218-B0-AP2) that worked so well with the old machine (with a Videx Videoterm 80-column card and a pre-boot) comes up showing MouseText characters as column headings, instead of the familiar A, B, C, and so on. The program also worked very nicely with the "old" (unenhanced) //e. Now with the 65C02 chip, how do I get rid of the MouseText and regain the usual column headings?

Peggy Brooks 626 Oakmont Drive Asheboro, NC 27203

Dear Peggy:

The problem is not with the 65C02 chip, but the character-generator ROM that's part of the //e enhancement package. Your version of Visi-Calc was produced when the MouseText characters were just a gleam in some software engineer's eve. There's nothing you can do about them, short of replacing your current character-generator ROM with an old one, or upgrading your Visi-Calc package with a newer one. You may have trouble finding such an upgrade, though, since Lotus Development, the owners of VisiCalc, stopped producing the program last spring.

Do-It-Yourself Pre-Boot

Dear inCider.

I recently purchased Peachtree Software's Inventory System, which I run

BOWL-KEEPER II

- outgrowth of BOWL-KEEPER

CORRECTIONS

In "Hard-Driving Disks" (September 1985), the reference to floppy-disk speed is incorrect as it appears on p. 25. The sentence should read, "...a hard disk can spin ten times faster than a floppy—3000 rpm versus 300 rpm..."

In the September 1985 Apple Clinic, spaces were inadvertently omitted from the patch in Figure 2 (p. 66). The amended figure appears below:

Figure 2. Patch to make Pro-DOS 1.0.1 boot on Franklin.

Track/Sector—ByteChange \$1/\$C—\$B4 \$AE \$B3 \$FB to \$A2 \$EA \$EA \$1/\$9—\$59 \$69 \$0B \$D0 \$03 to \$69 \$0B \$EA \$EA

Those interested in Ruby the Scene Machine (New Software, August 1985, p. 80), should contact CompuTeach Products at HRM Software, 175 Tompkins Avenue, Pleasantville, NY 10570, (914) 769-7496.

BACKUP PROTECTED SOFTWARE with COPY II PLUS™ ver. 5

From the team who first brought you **COPY II PLUS** in 1981 comes a completely updated disk backup utility for your Apple // computer. New features include:

- Fully automatic bit copy*. All parameters are stored on disk. Simply type in the name of the program you wish to backup, and COPY II PLUS does the rest!
- New utilities including Alphabetize Catalog, Fast 2-pass Disk Copy on a //c or //e, and an all-new Sector Editor.
- **Supplied on a standard DOS** diskette. Runs on the Apple //, Apple //+, Apple //e, Apple //c. Requires 64K and one or two disk drives.

Increase the power of your Apple $/\!/ \dots$ Use **COPY II PLUSTM 5.0**

ASK INCIDER

on my //e with Applied Engineering's Z-80 Plus card, CP/M 4.0, and an Epson FX-80 printer. The program works fine, except that I can get only 80-column output from my printer, not the 132-column output the program requires. Is there a way to format my CP/M program to print 132 columns of type?

Ed Snyder 16032 Mariner Drive Huntington Beach, CA 90264

Dear Ed:

I've never used Peachtree's Inventory System, so I don't know if you can modify the program to get 132 columns on your printer. I don't think you need to alter the software, though. You just need a pre-boot that will put your printer into 132-column mode before you boot CP/M.

First, boot a DOS 3.3 disk. Then turn on your printer, and, assuming your printer is connected to slot 1, type in PR#1. Finally, type in the following two lines from the keyboard:
PRINT CHR\$(27);"P"
PRINT CHR\$(15)

Remove the DOS disk and boot CP/M. Your printer will now work in condensed mode until you send it new control codes, or until you turn it off.

Voluminous Changes

Dear inCider.

Can you recommend a quick method for changing the volume number of a DOS 3.3 disk once the disk has been formatted and filled with files?

John M. Klein 4023 Oxhill Road Spring, TX 77388

Dear John:

I suggest you use a byte-zap utility to change the volume number of the disk. The volume number is contained on track 17 (\$11), sector zero, byte 06.■

CORRECTION

Sorry, wrong number. The correct telephone number for Easynet, an on-line service mentioned in DataGram (September 1985, p. 125), is (215) 664-6972.

\$125.00

\$150.00

No wonder we call it Better Working.

The facts are in.

And as you can see from our little chart, the Better Working™ WORD PROCESSOR not only offers some important and useful advantages, it offers them for considerably less than certain other well-known brands.

Now we'd be the first to admit that the chart above can't tell you everything you need to know.

So we'd also like to mention that neither of our high-priced rivals offers one-time printer customizing.

And that you can't even buy a spellchecker to use with them (the American

Heritage Spellchecker in our program finds 99% of all common mistakes). While only our most costly competitor matches our abilities to undo a delete command, lock and unlock files and provide 40/80 character onscreen capacity.

Finally, just in case you're thinking of paying the extra \$65-

He & Report

BeilerWorking

BellerWorking

\$90 for an established name, we should point out that Better Working is a division of Spinnaker Software Corporation, one of the most respected companies in home software. And Better Working isn't limited to word processing—there's FILE & REPORT and SPREADSHEET, too.

All of this begins to explain why we call it "Better Working."

What it doesn't explain is why you'd want anything else.

What you should know about the International Apple Core.

If you're like most Apple users, you don't realize the many benefits of an IAC membership. Or what it can do for you and your computer.

So what's an IAC?

International Apple Core™ is a non-profit organization of Apple users and user groups. We are dedicated to providing education, information and support to users of Apple and Apple-compatible products.

We aren't just for clubs. An individual can enjoy all the special benefits we have been providing user groups since 1979. You may share information on new applications. Or learn the latest on products. Or keep up on Apple events. Even receive specialized training.

If you'd like to join a local user group or contact other Apple enthusiasts, we can help you find them.

A membership That pays you.

As a member of IAC you nearly get paid with what you will save. By joining you will save nearly \$20 on our electronic spreadsheet, *IACcalc*TM. Not to mention all the other benefits only available to you as a member.

Information, please.

IAC provides many sources of information. Your \$30 yearly membership fee brings a 12-issue subscription to *Nibble* magazine devoted to Apple systems and compatibles. *Nibble* features more than \$50 worth of readytorun Apple programs in each issue. The programs focus on home, business, education and entertainment. *Nibble* also features new products, reviews, tips and techniques for learning more about your Apple and having fun doing it!

You will be eligible to receive the IAC *Disk of the Month*, a subscription to user contributed software. Each disk presents themes like games, education, or a potpourri.

Get an education.

You'll receive many educational benefits from our software programs. Our 3Pak™ series of theme packaged programs includes Educational, Financial, Games and the popular Logo. We have an Applesoft Tutorial and Education disk which is great for children.

Support for your Apple and you.

For as little as \$50 annually and no deductible, you can protect your hardware, software and disks for up to \$15,000.

Attach-Bios and CP/M→SOS Converter are ideal disks for Apple II Pascal and Apple III CP/M® application writers, vendors and users. All documentation is on the disks and no softcard is required to run Converter.

Invite your friends and save.

IAC offers user groups a special package. For \$90 your group receives a full year IAC membership and a subscription to Nibble. Included are the Disks of the Month and a listing of other IAC affiliated user groups world wide.

Individually or as a group you can't lose. So fill out the membership coupon below. And don't forget to ask for our product catalog.

The companies we keep.

Here is a list of the corporations that support and sponsor the International Apple Core.

Apple Computer Inc., Cupertino, CA Brock Software Products, Crystal Lake, IL Burtronix, Orange, CA Digital Research, Pacific Grove, CA East Side Software Co., New York, NY Educational Software Products, Glencoe, IL Electronic Arts, San Mateo, CA General Microcomputer, Inc., Michigan City, IN Hayes Microcomputer, Norcross, GA Houston Instrument Division, Austin, TX Howard D Sams Co. IIC SYSTEM CLOCK

- · Fully ProDos compatible
- · Automatic time and date stamping
- · Easy to use from BASIC
- Battery operated, uses 3 "AA" batteries (will last 1-2 years before simple replacement)
- · Date has year, month, date and day of week
- · Time has hours, minutes and seconds
- Will time and date stamp AppleWorks files
- Will display time and date on the AppleWorks screen
- Auto access from AppleWorks data-base (just use a time and date field)
- Pass through serial port The IIc system clock can plug into either the modem or printer serial port, then modem or printer plugs into the clock
- No hassle 5 year warranty
- Only \$79.00

THE EDUCATION ADVANTAGE AD

Apple II's in Today's Schools

Give The Gift Of Education

Keyboarding software from South-Western. The perfect gift for the whole family. KEYBOARDING ALPHA-PAC and MICROTYPE, THE WONDERFUL WORLD OF PAWS make learning how to keyboard the right way fun—and effective.

Designed for children ages 8 to 12, MICROTYPE, THE WONDERFUL WORLD OF PAWS uses "PAWS," an animated cat, to teach basic keyboarding skills.

And, for adult learners, KEYBOARDING ALPHA-PAC uses animated graphics to demonstrate which fingers should strike which keys and show correct hand position.

Get the most out of your family computer, order these unique software packages for this holiday season!

To order your software packages, fill out this form and return it today!

South-Western Publishing Co., ATTN: Consumer/Professional Products Division, 5101 Madison Road, Cincinnati, Ohio 45227

Apples in Class: The Latest in Team Teaching

From elementary school to high school, Apple computers are taking on a variety of innovative roles in education.

by Wendy Lea McKibbin, inCider staff

- n an isolated ranching community of 300 in Wilsall, Montana, the English teacher for the 38 high-school students has found that the computer "opens kids up to writing." Joanne Tulonen has also found a way to break through the cultural and social isolation geography would suggest. She is one of four rural teachers scattered across the country who is tied into an experimental computer network with the Bread Loaf School of English in Vermont.
- High in the Smoky Mountains of North Carolina, the science class of a small community high school gathers local biological samples and exchanges them for specimens gathered by a coastal school in the same state. Students mail photos and samples back and forth and share their research findings through a network of 60 rural schools tied into the University of Western North Carolina.
- Elementary students at the Hennigan School in Boston enjoy a privilege that may some day be standard for American children: Every child has a computer that is exclusively his or hers at home and at school. The school is the site for an educational-research project called "Head Light" whose purpose is to find the best use of technology in the class-room.
- Fourth- through sixth-grade students and their teachers in the Florida Keys are creating a marine-ecology data base that will form the basis for research projects and new curricula in science classes. Students will use database, word-processing, and spreadsheet applications to present the results of their investigations and experiments.

These snapshots of the new American classroom hint at a force that is transforming the face

and form of education in the United States. Dr. Stephen Marcus, a member of the Advisory Board of the Apple Education Affairs program, notes that at least 20 states have now mandated the instructional use of computers in the classroom. And computer-literacy courses are only a small part of this new thrust. More often than not, educators are interested in using computers as productivity tools for students and for themselves, as evidenced by the popularity of AppleWorks (an integrated software package) and Apple Writer (a word-processing package) in this market. At the creative forefront, some teachers are using the microcomputer to improve students' logic, develop problem-solving talents, and to sharpen thinking skills.

While the spiral notebook and the blackboard are in no immediate danger of extinction, computers are gradually penetrating "At Apple, we take education seriously," Ambron says. "Technology is a learning aid that can augment what is going on in the academic environment."

elementary, junior high, and high schools, from coast to coast. In 1984 alone, Indianapolis bought 400 microcomputers as part of a comprehensive computer-instruction strategy; Tennessee purchased more than 5200 Apple //e systems for its 1984-1985 school year; and the Los Angeles Unified School District contracted to buy 6000 computers over a three-year period. At the head of the pack are Houston, Boston, and Broward County in Florida where the ratio of students to computers is 25 to one.

Talmis Research in New York estimates that the installed base of computers in K-12 classrooms topped one million during the last school year and will continue to expand rapidly through 1990. Currently, at least 50 to 60 percent of the systems used are Apple products, followed by Commodore, Radio Shack, and IBM.

"I think we're on the verge of something very, very exciting in education," says Sue Ann Ambron, education marketing manager for Apple Computer. "We're going to see a new wave of technology within the classroom and outside it as four separate industries—computers, communications, television, and publishing—begin to merge in the form of integrated products."

Only the Best

Ambron indicates that technology can provide much-needed succor to learning disciplines.

"We spend a lot of money on education in this country, but we are beset with problems," she observes. "Many of our teachers are frustrated by the mounting pressures of limited funds, teacher shortages, low student scores nationwide, and increasing public scrutiny."

She rolls off a list of additional ills: A 1983 report shows that 23 million American adults are functionally illiterate; the educational skills of graduating high-school seniors lag behind those of their parents; American students spend less time in the classroom than their foreign counterparts; and studies estimate that for the 12,000 hours our children spend in school, they squander another 15,000 hours in front of the television set.

"At Apple, we take education seriously," Ambron says. "Technology is a learning aid that can augment what is going on in the academic environment."

One of Apple's projects, the Apple Education Affairs Grant Program, encourages the pairing of colleges and universities with local high schools to reformulate teaching methods.

Wheels for the Mind

Coined "wheels for the mind" by co-founder Steven Jobs, the Apple grant program has helped move the computer from rudimentary computer-literacy applications to more innovative realms. Writing, math, biology, chemistry, and geometry teachers have developed project proposals Apple has matched with equipment and software grants—usually 30 systems per grant.

In most cases, at least one university and two schools participate in the project. The grantees must conduct their research during an allotted time and report their findings.

For example, Heritage College in Toppenish, Washington, pooled its resources with two nearby schools to help improve the English of native American and Hispanic students through word processing. Many of the students at the college are high-school dropouts or graduates who are returning to school to learn better job skills. Some are migrant farm workers.

The program studies the ways in which the computer can enhance the quality and amount of writing performed by students from several ethnic backgrounds, explains Dr. Richard Sawrey, grant director of the Toppenish campus.

"In a rural area where there are many nonnative English speakers, the tendency is to be laconic and to have a narrow range of expression," Sawrey says. "One of the greater difficulties for these students is the mechanical process of writing—particularly penmanship."

According to Sawrey, the keyboard provides a great boost to the writing process. He says students can write five times faster with the computer. They can also edit their papers more easily and accurately.

Beyond the Word

In Minneapolis, a 12th-grade English-composition class uses the

Flight Simulator II

Abole 118, & Abole 118

Put yourself in the pilot's seat of a Piper 181 Cherokee Archer for an awe-inspiring flight over realistic scenery from New York to Los Angeles. High speed color-filled 3D graphics will give you a beautiful panoramic view as you practice takeoffs, landings, and aerobatics. Complete documentation will get you airborne quickly even if you've never flown before. When you think you're ready, you can play the World War I Ace aerial battle game. Flight Simulator II features include ■ animated color 3D graphics ■ day, dusk, and night flying modes ■ over 80 airports in four scenery areas: New York, Chicago, Los Angeles, Seattle, with additional scenery areas available ■ user-variable weather, from clear blue skies to grey cloudy conditions ■ complete flight instrumentation ■ VOR, ILS, ADF, and DME radio equipped ■ navigation facilities and course plotting ■ World War I Ace aerial battle game ■ complete information manual and flight handbook.

SubLogic

Corporation 713 Edgebrook Drive Champaign IL 61820 (217) 359-8482 Telex: 206995 "LaVelle envisions a laboratory of computer-based workstations with sensors for temperature readings, video cameras, speech-synthesis capabilities, and transducers."

computer not only as a writing tool, but as a vehicle for cooperative learning. The class is one of three groups studied by the St. Louis Park School District and the Center for Cooperative Learning at the University of Minnesota under an Apple grant.

Dr. Roger T. Johnson from the Center for Cooperative Learning explains that his research examines student-to-student interaction and the conditions under which students learn best.

"The computer fits naturally with the concept of cooperative learning," Johnson says, "because it's one of the places where teachers intuitively put people in small clusters to work together. Children and adults like to talk to each other and work together when mastering the system."

In the senior composition class, students work in pairs and use word processing to learn how to write. First, students talk over writing assignments with a partner. Each partner asks the other questions, some provided by the teacher, some of his or her own composition. The partner then prepares a story outline for the student, based on the questions and answers.

Each student researches his or her own topic, but meets again with the partner to begin writing. "This helps them get over the blank screen," Johnson says. After they write the stories, partners swap their work and edit each other's copy.

Johnson is encouraged by team writing's positive effects—in-

creased motivation from peer pressure and shared responsibility for work—that make composition less threatening.

Scientific Notation

The University of Southern Colorado has teamed with Pueblo Central High School for a program called Changing Attitudes in Science. Director James LaVelle intends to take the tedium out of teaching science—a task accomplished more easily with the computer, he contends, because it lets students concentrate on scientific thinking instead of data collection. The system relieves drudgery and helps the student and teacher focus on critical thought processes.

Through the program, a bulletin-board system linked the college and high school so that they could share new findings, ideas, and events in biology. LaVelle has also organized a summer workshop for teachers from both educational institutions to provide a forum for developing a more integrated science curriculum.

Both institutions use Apple-Works. LaVelle explains you can use the spreadsheet to study air pollution, the data base to search for local flora and fauna, and word processing to write up the results of experiments. More advanced students write their own programs to test theories and record results. LaVelle envisions a laboratory of computer-based workstations with sensors for temperature readings, video cameras, speech-synthesis capabilities, and

transducers. He says he also hopes to see a nationwide biology network established.

"This [network] would give country schools the same advantages as the biggest urban schools and would provide a tremendous reservoir of ideas and resources for all science educators," LaVelle says.

Mathematical Theory

Math educators, too, entertain tantalizing visions of how computer technology can open new vistas of thought to the student. Researchers Susan Paalz Scally and John Olive of Emory University in Atlanta are using the computer to develop the mathematical reasoning skills of ninth-grade geometry students.

The Apple grant project directed by Scally and Olive uses Apple Logo to help students at three area high schools grasp the intricacies of geometric relationships. For an hour each day, using Turtle geometry, 150 students examine relationships such as rotations, translations, ratios, proportions, and scalings. Students work in pairs to solve problems, discuss solutions, and explore "whatif" thinking.

The program follows these students through tenth-grade geometry and compares their test scores with those of a control group that hasn't participated in the Logo project. Although the final test results haven't been tallied, Olive says he and Scally have witnessed improvement in students' abstract thinking.

Big Game Hunting? Try Baggin' Our Dragon.

It's the biggest game in town

Our dragon, of course, is Wizardry—that unique series of computer recreation programs designed for Apple users who are seeking the ultimate "big game" challenge.

Since its debut, Wizardry has been the best-selling computer game of its kind.

For a very good reason:

Because Wizardry is more than just a game, more than a diabolically clever maze.

Wizardry is a complex world of variety and depth. A world of richness and pleasure.

Packed with suspense, full of surprises, Wizardry is enchanting—a compelling

diversion that turns your leisure time into prime time.

Wizardry is powerful and sophisticated. A simple command system, 3D maze displays and superb programming provide you with month after month of involvement and satisfaction.

Four years old and still growing, the game is already recognized by critics and game lovers as a classic.

Simply stated, Wizardry is the finest fantasy role-playing computer game you can buy.

Set your sights on the best. Track down Wizardry—the biggest game in town.

Enter the World of Wizardry®

A Classic Encounter

Proving Grounds of the Mad Overlord

The First Scenario

Unlike any other game you have ever played. A fascinating 10-level maze full of monsters, sorcery, traps and treasures. As you gain skills, the characters you create grow stronger, richer, wiser and better able to survive. The final goal is elusive. Your experience . . . unforgettable.

Twice voted "All Time Most Popular Computer Program" —Softalk Readers

Legacy of Llylgamyn

The Third Scenario

A spellbinder that advances the classic traditions of Wizardry. Find the great dragon L'kbreth and save the people of Llylgamyn. Includes full screen maze display and Windo-Wizardry, the revolutionary pop-up window graphics system. Requires brave adventurers of any level developed in PROVING GROUNDS.

"... A Landmark in Graphics Advancement" and "The Best Yet" —Softalk

Knight of Diamonds

The Second Scenario

This classic journey should only be attempted with those Wizardry heroes who have attained the 13th level of ability in PROVING GROUNDS. Their challenge—and yours—to adventure through a six-level maze and become the Knight of Diamonds. First-rate fantasy!

Awarded "Best Adventure Game for the Home Computer"

-Game Mfrs. Association of America

Wiziprint

Character Statistics Printout

A helpful utility program that prints the possessions, attributes and known spells of all your Wizardry characters. Quick, neat and easy-to-read. For use with 80-column printers. Compatible with all Wizardry scenarios. A real timesaver!

"Wiziprint is a very handy utility disk for ardent Wizardry players"

—Roe R. Adams III, Softalk

LOOK FOR THE DRAGON— SYMBOL OF WIZARDRY. PROMISE OF EXCELLENCE.

All software available for Apple II series computer 48k Coming soon for the Macintosh Proving Grounds also available for IBM PC and PCjr 64k

in RAM memory.

Store data separate from the program area so it can be accessed from different subroutines.

Use auxiliary memory in the lic or extended-memory lie for data

Store and recall programs or data using super fast disk capability, e.g., store 28.672 bytes in as little as 5.5 seconds.

Use powerful data input capabilities in your program and format your output with print formatting capability.

Using the ampersand symbol RAM SLICER adds 35 new commands to BASIC.

Requires Apple II+, Apple IIe or Apple IIc* with Applesoft and Monitor firmware, at least 64K, and at least one disk drive.

PRICE \$79⁹⁵ Includes Shipping Includes program disk, over 100 page reference manual, and a disk con-taining demonstration programs.

Money orders and cashiers check orders will be processed right away; allow time for personal checks to clear. *Apple II+, Apple IIe, and Apple IIc are Registered Trademarks of Apple Computer, Inc.

"The teacher is the key to making a successful learning situation, whether you're talking about computers, books, filmstrips, or anything else in the classroom."

A Perfect Marriage

Geometry students at the Emory University project use off-the-shelf software and books, but many educators see a need for better program quality and an increased quantity of well-tailored, substantive software. Apple is encouraging a marriage between major educational publishers who know the pedagogy and software developers who have the technical expertise to deliver quality products.

Last year, Apple asked the technology group of the Houston Independent School District to develop a reading program for grades K-2 that would be marketed by a major software publisher. According to Dr. Patricia Sturdivant, associate superintendent for technology, the program is a "whole-media solution" that combines textbook, workbook, and computer. Sturdivant's group project individualizes the learning process and uses speech-synthesis technology as a source of reinforcement for the child.

"We're excited about our collaboration with Apple and about the market possibilities of this new reading program," Sturdivant says. "We've also developed ancillary training materials for the teacher."

The Great Debate

No one in the educational field disputes the difficulty of delivering a comprehensive solution to the academic world's computer questions. But some educators doubt the wisdom of having computers in the classroom at all. In the

Teacher's College Record, Editor Douglas Sloan writes that the growing criticism of computer-assisted instruction is justified "because professional educators have been conspicuously uncritical of computers and prone to jump on any passing bandwagon.

In response, Dr. Stephen Marcus of the University of California at Santa Barbara suggests teachers refrain from condoning or denouncing computer-assisted instruction. He upholds a more practical approach: Examine the situation while you mull over three basic questions. Marcus explains, "Educators should first ask themselves what they've been doing with computers that they find exciting. Then they should ask, so what? What are the consequences of those findings to themselves and their students? And finally, now what? In other words, how can their findings fuel further action and change?"

Apple Computer's Ambron admits that the company can supply only a small part of the solution. "The teacher is the key to making a successful learning situation, whether you're talking about computers, books, filmstrips, or anything else in the classroom."

Apple's strategy, according to Ambron, is to let teachers shape the form of technology in the classroom, "to work with the school districts, share their plans, and understand their requirements." It's not up to Apple to decide what the schools need. she concludes. The teachers have the last word.

New lightning-fast ZBASIC zaps the competition.

It's hot. It's brand-new. And light years ahead of anything else.

It's ZBASIC. Written *for* programmers *by* programmers. (If you know BASIC—you know ZBASIC!) Now you can write a program exactly the same way on an Apple, an IBM, a Tandy, or any other major micro and port the source code. You only write the program *once* ...and it runs on all the major micros. The commands stay the same—regardless of the computer*(even graphic commands and disk I/0!).

ZBASIC. Starting now, it's the only language you'll ever have to know.

*subject to hardware limitations.

The finest implementation of the BASIC language for microcomputers!

Quadram Enhances Apples!

Quadram expands the power of the Apple II series personal computers. Quadram set the standard with the Quadboard. Now we offer you Multicore, the card that delivers RAM expansion to 256K, parallel and serial ports, a ProDOS clock/calendar, and RAM drive software. Plus, there's the new Extended Multifunction Card, Clock/Calendar Card, Serial Interface Adapter, and Buffered Serial Interface Adapter. All designed to bring out the best your Apple has to offer. For further details on these cards as well as our popular APIC parallel interface and eRAM 80 cards visit the dealer nearest you, or contact us at 4355 International Blvd., Norcross, Georgia 30093 (404) 923-6666.

Pro-DOS Clock/ Calendar Long-life Lithium

battery • Easy to use date/time soft-ware.

Extended Multifunction
Card

80-column extension for Apple Ile

• 64K RAM expansion option • Color RGB interface • ProDOS clock/calendar.

Serial printer or communications interface • Supports graphics for Apple Imagewriter and Scribe printers

- Apple Super Serial Card compatibility
- Easy "switchless" serial configuration.

Apple, Apple II, Apple IIe, Apple Imagewriter, and Apple Super Serial Card are trademarks of Apple Computer Corp. Quadboard, eRAM 80, APIC, and Multicore are trademarks of Quadrum Corp. Scribe is a trademark of Scribe, Inc.

Guidelines for Buying Educational Software

Some so-called educational software packages are more educational than others. inCider presents some rules of thumb for parents and teachers who are developing software libraries.

by Linda Gail Christie

eachers and parents alike need software that will help youngsters learn basic educational skills. Deciding which programs best teach these skills, though, is not an easy task. What program characteristics can help you provide a unique classroom or home environment? What can the computer do that the teacher, mom, or dad cannot do? What can good software add to the educational experience?

In a videotape on buying educational software (recently produced for the Education Service Center of the Tulsa Public Schools, Tulsa, Oklahoma), Cathy Frederick, a computer-lab teacher, divided educational software into three categories:

1) programs that provide drill and practice in basic skills, such as reading, spelling, and arithmetic; 2) programs such as simulation games, adventure games, and interactive fiction that teach thinking and problem-solving skills;

 programs that provide an opportunity to develop creativity in fields like art and music.

Drill and Practice

Computers can promote learning by providing drill and practice exercises that reduce boredom and stimulate a child's interest. For example, a math-flashcard program or a typing-instruction package can accomplish a great deal while the teacher or parent attends to more demanding tasks. And a software tutor is tireless. If the student gets stuck or repeatedly misses a question, the program can offer help routines. Prompts can also serve to speed up the slow student. For instance, if the objective is to solve math problems within ten seconds, the computer may count off the seconds or beep to warn that time is running out.

Variety within a drill package is an important consideration. "Drill and practice programs must fit the curriculum," Frederick says. "The best ones can be tailored to the lessons the youngster is studying." Spellicopter, from DesignWare (ages 6-12), for example, allows the teacher to type in and save spelling lists. Spellicopter shows them to the student and presents fill-in-the-blank sentences. For example, if one of the spelling words is dog, the sentence could read, "The _ ate his bone."

"Drill and practice software must not only teach relevant material, but also engage the student—it must be reinforcing and motivating," Frederick advises. The youngster needs to know whether an answer is right or wrong, and the program must encourage him or her to continue

Portions of this article appeared previously in the May '84 issue of jr magazine (CW Communications/Peterborough).

"Creative software can also enhance projects in art and music."

"playing." According to Frederick, Basic Number Facts, from Control Data's Plato Courseware (ages 7–10), does an especially good job with this. Set up as an automobile race, this program allows the youngster to name his or her own racecar.

"However, instead of racing against some preset standard or time," Frederick says, "students race against their own best times. After three races, a graphics demonstration tells them how they did. The program also reviews the problems they missed or took too much time to answer. These problems are automatically incorporated into the next lesson."

Frederick also points out that the student should be able to control the speed at which the program runs: "Too slow and they get bored, too fast and they get frustrated." Reader Rabbit, from The Learning Company (ages 6-8), allows students to work at their own pace to learn vowels and consonants.

Drill and practice programs should also be easy to use without a great deal of adult supervision. Frederick especially likes the Sticky Bear Opposites program from Weekly Reader (ages 3–6), which teaches concepts like near/far and top/bottom. "Even a three-year-old can use these programs, because you need to use only three keys including the space bar," she notes.

Thinking Skills and Problem Solving

If the computer can free the student from tedious paperwork that doesn't contribute directly to the learning process, more time will be available for preparation, understanding, and fun. The teacher, as well as the student, benefits. The right software can help the instructor focus on the skill being taught instead of divert-

ing the student's time and energy toward unproductive areas.

"Thinking and problem-solving programs should have a well-defined purpose, and the instructions should be clear and logical," Frederick says. The Learning Company's Bumble Games (ages 6–10) and Bumble Plot (ages 8–12) teach ordering, logical thinking, and the use of grids and arrays.

"Grids and arrays are especially useful for learning how to do graphics programming on the Apple," Frederick observes. "Before the introduction of computers into the schools, we didn't even try to teach geometric coordinates until later in the elementary-school grades. With these programs, however, even third-graders can learn matrix concepts."

The same principle—focusing on the skill, not the "busy work"— can be applied to courses in which students must compute reports, analyze statistics, and predict performance. Punching numbers into a calculator, plugging numbers into formulas, and preparing charts are not valuable learning experiences in themselves. Computer-processed data yield more information about a problem in much less time with no errors.

Frederick's favorite simulation game is The Factory (ages 10-15) from Sunburst. This game has three types of machines—a hole punch, a device to rotate the part vou're making, and a machine that draws stripes. In one mode, you try to duplicate a part the computer has made. In another mode, you can make your own part and challenge someone else to duplicate it. "Kids really like this award-winning program," Frederick says. "Without realizing it, they are building, thinking, solving problems, and developing matching skills."

One of the more interesting aspects of the potential impact of good software on a child's education is a program's ability to teach decision making. An elementary version of this technique is found in adventure games and interactive fiction. The program presents the youngster with a set of circumstances, and he or she must make a choice among actions to proceed to the next scene. By simulating a situation and letting the student make decisions, suffer the consequences, and reap the rewards, these types of programs capitalize on the unique interactive capabilities of computers to teach children the skills of logical thinking.

The Oregon Trail, an adventure game from the Minnesota Educational Computer Consortium (ages 8-13), is one of five simulations in a software package called Elementary Volume Six Social Studies. "The Oregon Trail fits in especially well with our fifth-grade social-studies unit on American history," Frederick comments. "The students follow the same journey as the explorers, and must make decisions about buying provisions and so forth. If they don't buy enough ammunition, they can't shoot enough game to eat, and they starve. If they don't buy enough clothes to stay warm, they freeze in the mountains. The kids learn a lot while they are having fun."

Creativity with Computers

Creative software can also enhance projects in the arts, such as drawing pictures and writing music. "A creative program should stimulate students to try something new," Frederick asserts. "They should be able to learn from their mistakes and be free to experiment."

KoalaPad + , a touch tablet with drawing and graphics software from Koala Technologies Corporation (ages 6-adult), provides an easy-to-use computer painting program. The youngster uses the KoalaPad to draw lines, circles, rectangles, and freehand drawings in the same way an engineer would use a computer-aided-design (CAD) system. By selecting different shapes, colors, and textures from the Micro Illustrator

The Sequel to an Exciting Software Premiere...

chotCider volume II

More Of The Very Best Ready-to-run Apple II* Programs From inCider

Coming in October... a second incredible collection of *inCider* magazine's best programs. *hotCider Vol. II!*

Get a dozen ready-to-run programs for the Apple II on a high-quality, menu driven floppy disk. Programs for business, home management, education, entertainment, and graphics! No tedious typing or debugging to worry about! And it comes complete with its own documentation booklet.

What A Menu!

Just like the exciting Vol. I, hotCider Vol. II is loaded with all-time inCider favorites:

"Should I Trade?"—Tells you the Real cost of buying a new car.

"Low-Res to Hi-Res"—Shows you how to easily convert your lo-res pictures to hi-res.

"Modem Battleship"—Dial up a friend and use your modem to play this latest version of Battleship.

Plus, more utilities, games, and educational programs!

YES!	I want	the	very	best	ready-to)
I DO:	run pro	ogra	ms fr	om ir	Cider.	

Send me hotCider on disk for \$21.47**.

Vol. I- Still Available!

If you haven't ordered your *Volume I* yet, the premiere issue of *hotCider* is still available in limited quantities!

Enjoy such standouts as;

"VisiData"—A list handler that works like a spreadsheet.

"Poster Printer"—Say anything in a BIG way with your printer.

"Doing Windows"—Learn how to create Ma-

cintosh-style windows on your Apple II.

hotCider Vol. I also gives you three previously unpublished bonus programs, including "Cider Zap" (a full-fledged editing utility)!

Easy To Use, Easy To Order

There's no easier way to build a versatile software library than with hotCider Vol. I and Vol. II. To order your copies, return the coupon or attached card, or call **1-800-258-5473**. In NH, dial 1-924-9471

Designed For Those Who Only Accept The Best!

TIMEMASTER II H.O.'

- Absolutely, positively, totally PRO-DOS and DOS 3.3 compatible.
- Time in hours, minutes, seconds and milliseconds (the ONLY PRO-DOS compatible card with millisecond capability).
- 24 hour military format or 12 hour with AM/PM format.
- Date with year, month, day of week and leap year.
- Eight software controlled interrupts so you can run two programs at the same time (many examples are included).
- The only card recognized by both the DOS 3.3 and PRO-DOS versions of Apple Writer IIe.
- Appleworks will now time and date stamp all your data automatically.
- The only clock card that will display the time and date on the Appleworks screen.
- Compatible with ALL of Apple's languages. Many sample programs for machine code, Applesoft, CP/M and Pascal on 2 disks.
- On-board timer lets you time any interval up to 48 days long down to the nearest millisecond.
- Auto-recharging nickle-cadmium battery will last over 20 years.
- Two BSR/serial ports for future expansion.

н.о	PRO-DOS COMPATIBLE	DOS DATER	MILLISECOND	YEAR DATA	SOFTWARE	REMOTE SET PORT	BSR PORT	OTHER CLOCKS
	YES	YES	YES	YES	YES	YES	YES	YES
BRAND A	NO	NO	YES	NO	NO	NO	NO	NO
BRAND C	NO	NO	NO	NO	NO	NO	NO	NO
BRAND M	NO	NO	NO	NO	NO	NO	NO	NO
BRANDP	YES	YES	NO	YES	NO	NO	NO	NO
BRAND S	NO	NO	NO	YES	NO	NO	NO	NO
BRAND T	YES	NO	· NO	NO	NO	NO	YES	NO

Full emulation of all other clocks. Yes, we emulate Brand A, Brand T, Brand P, Brand C, Brand S and Brand M too. It's easy for the H.O. to emulate other clocks, we just drop off features. That's why the H.O. can emulate others, but none of the others emulate us. The Timemaster II H.O. will automatically emulate the correct clock card for the software you're using. Of course most programs will use the Timemaster II H.O. in its native mode, but it's comforting to know that you won't have to worry about compatibility problems. You can also give the H.O. a simple command to tell it which clock to emulate. This is great for writing programs for those poor unfortunates who bought some other clock card.

REMOTE CONTROL

Our BSR X-10 interface option for the H.O. allows you to remotely control up to 16 lights and electrical appliances through your BSR X-X-10 home control system in your home or office. You're already wired because a BSR system sends its signals over regular 120 volt wiring. That means you can control any electrical device in your home or office without additional wiring.

CLOCK PRICE \$129.00

BSR Option (may be added later) \$49.00

VIEWMASTER 80™

There used to be about a dozen 80 column cards for the Apple. Now there is only ONE.

- TOTALLY Videx Compatible.
- Perfect for any APPLE II, II+ or IIe.
- 80 characters by 24 lines, with a sharp 7x9 dot matrix.
- On-board 40/80 soft video switch with manual 40 column override.
- Fully compatible with ALL Apple languages and software—there are NO exceptions.
- Low power consumption through the use of CMOS devices.
- All connections are made with standard video connections.
- Both upper and lower characters are standard, with true descenders.
- All new design (using a new Microprocessor-based C.R.T. controller) for a beautiful razor sharp display.
- The VIEWMASTER incorporates all the features of all other 80 column cards, plus many new improvements.

The VIEWMASTER 80 works with all 80 column applications including CP/M, Pascal, WordStar, Format II, Easywriter, Apple Writer II, VisiCalc, Dollars and Sense, and all others. The VIEWMASTER 80 is THE MOST compatible 80 column card you can buy at ANY price!

PRICE \$139.00

Z-80 PLUS™ Now Includes New 4.0™ Software

Enter the CP/M world with the new Z-80 Plus card from Applied Engineering and introduce your Apple to thousands of new programs. Only the Z-80 Plus comes standard with the new 4.0 software, the most advanced system for running CP/M programs ever. Only CP/AM 4.0™ has advanced features like built-in disk emulation for popular memory expansion boards (those made by Apple and Applied Engineering and others) to give you a faster system with more storage. You also get menu driven utilities that are much easier to use than the older CP/M utilities so you can get down to all that great CP/M software faster. The Z-80 Plus runs older CP/M programs too, down to Version 1.6 (2.2 is the most popular). With the Z-80 Plus you can run the largest body of software in existence, and the Z-80+ is the only card on the market capable of accessing more than 64K in an Apple IIe. If you have an extended 80 column card, all 128K is usable, and if you have Ramworks, up to 1088K is available to CP/M. And each Z-80+ includes our CP/M Ram Drive software, enabling He owners to use an extended 80 column card, or a Ramworks card as an ultra-fast Ram disk enabling CP/M software to run 10 to 20 times faster. So fast acting software like WordStar, and dBASE II become virtually instantaneous! Simply plug the Z-80 Plus into any slot in your Apple. You'll have two computers in one and the advantages of both, all at an unbelievably low price.

- TOTALLY compatible with ALL CP/M software.
- Fully compatible with most hard disks including the Sider and Corvus.
- The only Z-80 card with a special 2K "CP/M detector" chip.
- Fully compatible with microsoft disks (no pre-boot required).
- Specifically designed for high speed operation in the Apple IIe (runs just as fast in the II+ and Franklin).
- Runs WordStar, dBASE II, Turbo Pascal, Fortran-80, Peachtree and ALL other CP/M software with no pre-boot.
- A semi-custom I.C. and low parts count allows the Z-80 Plus to fly through CP/M programs at a very low power level. (We use the Z-80B at a fast 4MHZ.)
- Does EVERYTHING the other Z-80 boards do, plus Z-80 interrupts.

 PRICE \$139.00

Our boards are far superior to most of the consumer electronics made today. All I.C.'s are in high quality sockets with mil-spec. components used throughout. P.C. boards are glass-epoxy with gold contacts. Made in America to be the best in the world. All products work in Apple IIe, II, II+ and Franklin. Applied Engineering also manufactures a full line of data acquisition and control products for the Apple; A/D converters and digital I/O cards, etc. Please call for more information. All our products are fully tested with complete documentation and available for immediate delivery. All products are guaranteed with a no hassle **THREE YEAR WARRANTY**.

Call (214) 241-6060, 9 a.m. to 11 p.m. 7 days a week or send check or money order to

P.O. Box 798, Carrollton, Texas 75006. MasterCard, Visa and C.O.D. welcome. No extra charge for credit cards. Texas residents add 55% sales tax. Add \$10.00 if outside U.S.A.

"Word processors give youngsters the freedom to concentrate on content."

Continued from p.110.

program, the student can draw both simple and complex pictures. Broderbund's Print Shop (ages 6-adult) lets you design your own greeting cards and print them with a graphics printer. The reading level is third grade, so a young child will need some assistance.

FIND OUT ABOUT IT!

Financial Software from Core Concepts™

WORK FORCE IITM 6 programs on 1 disk.

- THE LOAN ANALYZER: Compute loan and mortgage amortizations, balloon payments, total interest paid, daily percentage rates, present value of capital leases, and periodic payment amounts. Find an unknown term or the amount which can be financed. Print or display amortizations starting or stopping at any period. Currently used by Banks, CPA's and realestate agents across the country.
- THE SAVINGS ANALYZER: Compute the future value of savings, IRA's, and investments in moments with The Savings Analyzer.
- THE BALANCING ACTTM: Checkbook balancing is made easy with this once a month
 checkbook balancing program. Menus allow entries to be added or changed. Group totals, amount of error,
 and all entries can be printed or displayed.
- THE LINE WRITERTM: A line-at-a-time correctable typewriter. Great for addressing envelopes and other small word processing jobs.
- 5. THE WAGE ANALYZER: Analyze your income by the hour, time & ½, weekly, bi-weekly, semi-monthly and annually. Calculate increases or decreases by amount or percent. Printout provides a great way to present pay raises to employees.
- 6. THE CALCULATOR: Turns your Apple into a four function printing calculator.

"What exactly do you get for this price in these days of \$100 minimum work programs? You get a real value. I found the programs a joy of ease, completely understandable and with a price that's hard to resist. A valuable indispensible tool..." The San Francisco Independent / Business Section / July 4th, 1984.

PROFIT PURSUIT™ 4 programs on 1 disk.

- DEPRECIATION +: Print or display Straight-Line, Declining Balance, Sum-of-the-Years-Digits depreciations. Plus 3, 5, and 10 year ACRS for personal property, 15 & 18 year ACRS for real estate.
- 2. APRI: Find the Actual Percentage Rate of loans with prepaid points and fees.
- 3. LEASE MASTERTM: Find lease payment amounts, pre-tax monthly and yearly yield, total yield. Compute with multiple advance payments and residual value. Print or display lease amortizations starting or stopping at any period.
- 4. PRICING MASTERTM: Find the cost, selling price, mark-up, and margin. Recalculate by changing any entry. Print item name and data. A must for retailers & wholesalers!

Any child who has acquired basic writing skills can learn to use a word processor like Homeword, from Sierra On-Line (ages 8adult). Icon menus guide even low-level readers through filing, printing, and formatting operations. Word processors, much more than printing with paper and pencil, give youngsters the freedom to concentrate on content. For example, writing term papers by hand is quite time-consuming. If the youngster is practicing handwriting skills, longhand is essential, but if he or she is learning how to express ideas or write a science-project report, paper and pencil are a waste of time and energy. "Kids are more willing to edit on a computer than they are on paper," Frederick also points out. "They are free to go back and edit their work without having

Song Writer, from Scarborough Systems (ages 8-adult), is a "music processor." This program does for music what a word processor does for writing—and more. The screen presents an animated holepunched piano roll that looks like a keyboard. "You can write your own tunes or edit any of the 20 stored compositions and make them go faster or more slowly," Frederick says. "Hearing the computer play your composition right after you write it is quite an experience, even for adults." One bonus is that you don't need to learn how to play an instrument to write music.

to rewrite the entire piece.'

Selecting Your Educational Software

Above all, educational software should meet the goals of the course by teaching the skills children need. But teachers and parents need to examine those goals closely and to consider new ones relative to the power and flexibility computerized instruction offers. Is the goal to develop hand-eye coordination or to create a picture? To practice handwriting or to write a report? To learn to memorize or to solve a math problem? To learn drafting skills or to design a structure? To manipulate numbers by hand or to predict performance based on past experience? To learn to operate a computer or to learn to think?

Once you identify your goals,

P.O. Box 24157 Tempe, AZ 85282 AZ residents & inquiries call (602) 968-3756

WANTED:

WORLD'S GREATEST ADVENTURES.

REWARD: \$1000 and FAME. CALL (800) 227-6703.

ACS is your tool kit. More than 7000 parts to build from. Power to spare!

Or make your own parts from scratch. Draw em. Give em properties. Go for it!

ACS is menu driven. It works with a positive "stick shift" controller. Easy as pie!

Ready-made segments of sci-fi, mystery & dragontype adventures included. A real bargain!

Mountains, oceans, forests & etc. are pre-built. Or make your own landscapes. You're the boss!

Amazing fact #1: ACS makes adventures (& finishes parts of yours) by itself. This is No Lie!

Music modules & sound effects included. Score your adventures like movies. Be a maestro!

No arms control here! Endless weapons of your design. (Endless armor & cures, fortunately.)

Complete, top-notch epic adventure included: Rivers of Light by Stuart Smith, author of Ali Baba!

500 obnoxious creatures thrown in! Or make your own. Point em at the population! See their priorities!

You get magic! 31 variations on 15 Big Spells! You get technology. You get religion. All right!

Amazing fact #2: ACS integrates text and graphics. All other products wimp out in this regard.

Characters? How many you want? Make em. Break em. Cast them into the world without a dime!

7 tutorial mini-adventures included! Generously survivable for those tentative first timers!

Design up to 15 different regions with 16 different rooms in each one. Space out!

When you've made a zippo-zocko GREAT ADVEN TURE, send it here. You could win 1,000 smackers!

ADVENTURE CONSTRUCTION SET

HOW TO WIN: Send your adventure entries to Electronic Arts by 12/30/85. 3 winners will be selected by our judges. Their decision: final. Your adventure becomes "public domain" which means you can still get famous even if you don't get rich. HOW TO ORDER: Visit your retailer or call 800-227-6703 for direct VISA or MasterCard orders (in CA call 800-632-7979). To buy by mail, send check or money order to Electronic Arts, P.O. Box 306, Half Moon Bay, CA 94019. Add \$3 to cover insured shipping and handling. Indicate desired machine version. Allow 1-4 weeks for delivery. All EA products purchased direct have a 14 day "satisfaction or your money back" guarantee. PRICE & MACHINE AVAILABILITY: C-64 \$39.95. Apple Ile/c \$49.95. Coming soon to IBM PC/PCjr \$49.95. To receive our complete product catalog and direct order form, send 50¢ and a self-addressed, stamped envelope to Electronic Arts, Catalogue Offer, 2755 Campus Drive, San Mateo, CA 94403.

Resources for Educational Software

Books and Directories

Almost Free Computer Stuff for Kids. Linda Gail Christie and Gary J. Bullard, Plume/New American Library, 1633 Broadway, New York, NY 10019, \$9.95. Lists a number of publishers of inexpensive educational software and on-line bulletin boards.

Free Software for Your Apple. Enrich/Ohaus, 2325 Paragon Drive, San Jose, CA 95131, \$8.95. Provides a quick orientation to on-line bulletin-board systems. Lists phone numbers and the focus of a number of bulletin boards containing public-domain programs you can download.

Book of Apple Software. Arrays Inc., The Book Division, 11223 South Hindry Avenue, Los Angeles, CA 90045, \$19.95. Contains lengthy reviews and performance ratings on 600 Apple programs.

Blue Book for the Apple. WIDL Video, 8135 North Monticello, Skokie, IL 60076, \$24.95. Lists 4600 programs in 62 categories. Contains product descriptions from manufacturers and no evaluative comments.

Bowker/Bantam 1985 Complete Sourcebook of Personal Computing. R.R. Bowker, 205 East 42nd Street, New York, NY 10017, \$18.95. Lists 3400 software programs arranged by category. Annotations are ten to 20 words and provide no analysis or indepth description.

On-Line Data Bases

International Software Database. A computerized on-line service provided by the commercial information services Dialog and Knowledge Index (Dialog Information Services, 3460 Hillview Avenue, Palo Alto, CA 94304,

800-227-1927, or 800-982-5838 in CA). The data base contains nearly 20,000 entries and is updated monthly. Citations include annotations, computer compatibility, category, and ordering information.

Resources in Computer Education (RICE). Contains approximately 3000 software citations and reviews of educational courseware for elementary and secondary schools. Provides detailed evaluations, including instructional techniques, instructional objectives, and hardwaresystem requirements. Northwest Regional Educational Laboratory, 300 S.W. Sixth Avenue, Portland, OR 97204. Available on line through the information services BRS and BRS/After Dark (Bibliographic Research Service, 1200 Route 7, Latham, NY 12110, 800-833-4707).

We went to the inventor of the Apple *II*, the man who helped launch the personal computer revolution, Steve Wozniak. We wanted to know if the Mouse Series, our new family of software for the Apple *II*, could bring new excitement to the first industry standard:

66 The Mouse Series" is the natural evolution of Apple II software. The customer of today needs power... that's a given. The Mouse Series lets you get over that learning curve... quickly. It brings many of the advantages of the Macintosh to the Apple II.99 Steve Wozniak

With Mouse Calc you can really make your worksheet play...and in less time than you ever thought possible. Avoid the draft the second time... every time with Mouse Word, an exciting word processor that has communications built in. And for personal use, make sense out of your dollars with Mouse

you're ready to find the software that will accomplish the task. And the added flexibility of being able to custom-design lessons and adjust speed levels makes a program even more valuable.

Software should follow sound educational principles. Lessons should consist of smoothly sequenced, self-contained modules. Instructions should be clear and consistent. The reading level should match the level of the student doing the lesson—otherwise, the child will require adult supervision.

Responses should be simple preferably multiple-choice, or limited to a few keys. The program should lock out extraneous keys so that inadvertent key pressing won't crash the program.

The software should record the student's answers and report his or her progress. With the proper programming, the student knows right away if he or she answered the problem correctly or not. A smiling clown or a cute tune keeps youngsters focused on the task. And the program can keep a record of performance to help the instructor design a course of study relevant to a student's needs. To improve, the student

needs to shoot against a previous high score or proceed to a more difficult level.

Keep students' preferences in mind, as well. "Sometimes the software description seems to fit your criteria perfectly," Frederick says. "The kids, however, may or may not like it. Until you see that the kids like it, don't buy it."

Most distributors can provide review copies of programs to educators. You can also ask a local dealer to let you borrow software or try it out before you buy. Don't rely on your judgment alone—see if the kids use it, if it holds their attention, if they can read the instructions, and if they are learning from it what you want.

Magazine reviews provide some of the best information about educational software. They are generally unbiased, and may offer descriptions of how programs work, as well as their pros and cons. Many state department-of-education offices publish newsletters reviewing software for teachers. Parents can often get excellent advice from teachers about programs that will benefit their children.

"I tend to stick with software manufacturers that produce consistently high-quality products," Frederick adds. "I'm especially impressed with The Learning Company and Sunburst."

You can also find listings and reviews of educational software products in books and directories. (See the accompanying sidebar.) Not every piece of software can meet all of your requirements—or the restrictions of your budget. Determine the features that are most critical for your needs, seek them out, buy the software, and let the kids learn with it.■

...WITH THESE 15 UNIQUE BENEFITS

1 COST + 8% PRICING — The NETWORK purchases millions of dollars in merchandise each month. You benefit in receiving the lowest price available and all at just 8% above published dealer wholesale price.

2 OUR 600 PAGE WHOLESALE CATALOG — Members receive our 600 page wholesale catalog containing over 20,000 hardware and software products for the IBM PC, APPLE and over 50 other popular computer systems. THE NETWORK'S CATALOG IS THE LARGEST SINGLE COMPILATION OF PERSONAL COMPUTER PRODUCTS AVAILABLE TODAY. NOW UPDATED

3 IN-STOCK INSURED FAST HOME DELIVERY—The NETWORK maintains a giant multi-million dollar inventory of most popular products, allowing us to ship many orders from stock. Non-stock items are typically maintained in local warehouses just days away from The NETWORK and YOU. We pay all insurance expenses on your shipment. EMERGENCY OVERNIGHT SERVICE IS AVAILABLE ON REQUEST.

4 10 DAY RETURN POLICY—If you are not satisfied, for any reason with any hardware component purchased from The NETWORK within 10 days of receipt, we will refund your entire purchase (less shipping) with no questions asked.

5 MEMBERSHIP SATISFACTION GUARANTEE—If for any reason you are not satisfied with your membership within 30 days, we will refund your dues IN FULL.

6 EXPERIENCED CONSULTANTS—The NETWORK hires consultants, not order takers, to aid you in product selection. Our consulting staff possesses in excess of 150 man years of personal computer product experience. We back our consultants with our money back guarantee: IF ANY PRODUCT RECOMMENDED BY OUR CONSULTING STAFF FAILS TO PERFORM AS PROMISED—WE WILL TAKE IT BACK AT OUR EXPENSE FOR A 100% REFUND.

7 FREE TECHNICAL SUPPORT—The NETWORK supports every product it sells. Our qualified TECH-SUPPORT staff will help you assemble your system, interpret vendor documentation and get your software and hardware to work. WE WILL GIVE YOU ALL THE HELP YOU NEED, WHEN YOU NEED IT—FREE!

OPTIONAL BUSINESS RENTAL LIBRARY — All members can join our BUSINESS RENTAL LIBRARY featuring over 1000 available titles for just \$25 PER YEAR above the base membership fee. This entitles you to rent business software AT JUST 20% of the DISCOUNT PRICE FOR A 14 DAY PERIOD. If you decide to keep the software, the entire rental fee is deducted from the purchase price. VIP MEMBERS GET A FULL 30 DAYS for just \$30 above the V.I.P. base fee. This also includes the game library privileges for a \$5 combination savings.

†9 OPTIONAL GAME SOFTWARE RENTAL LIBRARY— The Game Rental library is available to members for just \$10 PER YEAR and permits evaluation (or just enjoyment) of any game or educational software product as above.

10 SPECIAL SAVINGS BULLETINS—THE PRINTOUT
The Printout contains all the New Product listings and price changes you need to keep your Catalog up to date. Also, we buy excess dealer inventories, and store bankruptcy closeouts, which we turn around and make available to our members at fantastic savings via THE PRINTOUT.

1 DISCOUNT BOOK LIBRARY—Working with numerous publishers and distributors, The NETWORK has assembled a library of over 1000 computer related books and manuals at savings of up to 75% from the normal store price.

12 MEMBERSHIP REFERRAL BONUS—Our most valuable source of new members is you! To date almost 40% of our members have been referred by word of mouth from other satisfied members. For those of you who refer new members, The NETWORK will credit a cash bonus to your account applicable to any future purchase.

13 CORPORATE ACCOUNT PROGRAM—Almost 50% of The NETWORK's members are corporate buyers and users (see opposite page left). The NETWORK can establish open account status and assign designated account managers to expedite orders, and coordinate multiple location shipments.

14 QUANTITY DISCOUNTS—For large corporations, clubs, and repeat or quantity buyers The NETWORK can extend additional single order discounts, when available to us from our manufacturers and distributors.

15 PRICE PROTECTION—The PC Industry is crazy!! Prices change not yearly or monthly or even weekly but often day by day! These changes are sometimes up but are mostly down!!! THE NETWORK GUARANTEES THAT IN THE EVENT OF A PRODUCT PRICE REDUCTION, BETWEEN THE TIME YOU PLACE YOUR ORDER AND THE TIME THE PRODUCT SHIPS YOU WILL ONLY PAY THE LOWER AMOUNT!!

Community Consensus: Computers in Education

Planning computer use in the schools is everyone's responsibility. Joe Nathan suggests a blueprint from a model plan for computer education in Minnesota.

by Joe Nathan

Technology revolutions have also failed to touch the schools largely because purchases have preceded planning.

—Ernest Boyer, former U.S. Commissioner of Education

n 1984, the National School Boards Association report found that 86 percent of the publicschool districts surveyed had no policies or guidelines about what they would do with the computers they were rushing to purchase. While recommending caution in interpreting the study results, the association says, "The findings do provide a general overview of what is happening in one of our nation's school districts." The question is, is this wise? Is it acceptable? Don't effective organizations try to develop policies and guidelines first, then carry them

out? Yes, they do. And any effective use of computers in our schools will come only from following carefully formulated, creative policies.

An example of such policymaking is the Technology and Educational Improvement Act, adopted in 1982 by the Minnesota legislature. One national school expert calls the Minnesota program "a model piece of legislation—one of the best I've seen." Though it's not perfect, the Minnesota plan provides some guidance in thinking about how a district or state ought to plan for the use of computers and other advanced technology in its schools.

Technology Utilization: The Community Level

Specifically, the act requires each of Minnesota's school districts to develop a written "technology-utilization plan." This plan must be written in conjunction with a local advisory committee

composed of parents, community members, and faculty. Each school district can apply for financial aid to develop the plan. The technology plan for each district must meet several criteria that are intended to encourage cooperation and community involvement. The plan must show:

- how the district determined its needs and what it found;
- how the district will use technology to provide educational opportunities for people of all ages, including women, minorities, and the disabled living in the district;
- what the district's goals are for implementing technology in management and instruction;
- how the district plans to meet those goals;
- how technology will be integrated into the district's community-education program;
- how the district will evaluate its efforts in technology;

THE X-10 POWERHOUSE
INTERFACES WITH YOUR APPLE
TO CONTROL YOUR HOME...FOR SECURITY,
COMFORT AND ENERGY SAVINGS.

This remarkable Interface lets you run your home through your Apple lle or llc and a mouse, keyboard or joystick.

When you're away, it makes your home look and sound lived in. When you're home, it can turn off the TV at night and wake you up to stereo and fresh brewed coffee in the morning. It can even turn on your air conditioner and control your heating.

SPECIAL COLOR GRAPHICS MAKE PROGRAMMING A SNAP.

You simply pick a room from the display screen. Use your

mouse, joystick or keyboard to position graphics of lights or appliances. Then follow on-screen instructions to program any light or appliance to go on or off whenever you choose. You can even control thermostats, light intensity and more.

THE WAY IT WORKS. The X-10 Powerhouse Interface is cable-connected to the Apple RS-232 port and plugged into a standard 110V outlet. After it is programmed, the Interface sends digitally encoded signals through your home wiring to special X-10 Modules. To control a lamp or appliance, you simply plug the electrical device into a Module and then plug the Module

into an outlet. The Interface can control up to 256 Modules throughout your home and won't interfere with normal use of lights and appliances.

There are plug-in Appliance Modules, Lamp Modules, Wall Switch Replacement Modules and Special 220V Modules for heavy duty appliances such as water heaters and room air conditioners. Plus

Thermostat Controllers for central heating and air conditioning, Telephone Responders to control your home from any phone, and much more.

IT WON'T TIE UP YOUR COMPUTER. Use your computer only for programming. When you're finished, disconnect the Interface from the RS-232 port and keep it plugged into any convenient power outlet in your home. It will operate as a stand-alone controller with battery back-up and will run your home automatically.

SURPRISINGLY INEXPENSIVE. A Powerhouse System including the Interface, software and connecting cables costs less than \$150. X-10 Modules are less than \$20 each.

FOR THE X-10 POWERHOUSE DEALER NEAREST YOU, CALL TOLL-FREE: 1-800 526-0027

Apple, Apple Ile and Apple IIc are registered trademarks of Apple Computer, Inc.

"The first major problem concerned politics, that constant companion of reform."

- how it will report results to the community;
- evidence that the plan was developed in consultation with a state-mandated, local curriculumadvisory committee; and
- an indication that the plan will be reviewed each year and that needed revisions will be made.

Each district must submit its plan to the Minnesota Department of Education for approval. Then the fun begins. Enough money has been allocated so that every district with an approved plan will receive \$1 per student for staff training and another \$1.60 per student to be applied toward the purchase of software on the education department's list of "high-quality software." The district may use state funds to pay no more than 50 percent of the cost of software on this list.

Before being listed, software is reviewed by five people. Three are classroom teachers, one is an expert on computers, and the last is the state education department's specialist on the curriculum area the software deals with (that is, English, science, or mathematics). Rankings are given in three areas: instructional characteristics. content characteristics, and technical characteristics. Software must receive at least 70 percent of the total possible points from the five reviewers in order to be placed on the approved list. As of early 1985, the education department had prepared three lists of highquality software.

The process of submitting software to the education department for review is simple. A disk and any accompanying material are simply sent to Dr. Gilbert Valdez at the Minnesota Department of Education in St. Paul. Valdez is the manager of the section responsible for integrating technology into the curriculum of the state's schools.

The state's list will benefit school districts. In many instances, school districts have found it difficult to obtain review copies of new software products or to develop expertise in evaluating software. The state's list can serve as a buying guide for such districts. The plan is to update the list every six months.

Although districts may purchase software not included on the list, they will have to find other funds to pay for such products. Under this act, state funds can be used only for software on the department's approved list.

Another portion of the bill provided about \$1.25 million to be shared by eight to ten model districts around the state. Those chosen sites received money to develop the most advanced, most exciting programs imaginable. About \$300,000 has been allocated to allow other educators to visit these sites.

Teacher Training

A key part of Minnesota's plan provides funds for training teachers. (The actual act was developed with a great deal of participation from Minnesota educators.) The Minnesota Educational Computing Corporation (MECC) received money to work with school districts around the state. Some of MECC's staff are former teachers, and others on the staff have been working closely with teachers for more than a decade. In providing funds to MECC, the legislature recognized that training would have to be provided by people familiar with the practical as well as the theoretical aspects of using computers in schools.

Both state and local officials say that the most effective training for teachers was conducted by people who are or have been teachers. Their experience gives the trainers credibility with other teachers and enables them to answer specific questions and provide creditable advice about implementing the plan.

Observers of the Minnesota plan hope that schools will be open to extremely creative and unusual applications of advanced technology. Clearly, the act places extraordinary opportunities and responsibilities in the hands of local districts.

Overall, both the education department and local school officials are pleased with the law. Elmer Koch, a curriculum generalist for the Minneapolis public schools says he's "very optimistic about the law's potential." Charles Lund, assistant director of math, science, and technology for the St. Paul public schools, agrees, calling it "a great opportunity to develop strong, effective programs."

The Problems of Implementation

However, Minnesota's plan did run into several problems during its first year of implementation. Since learning from other people's mistakes is as valuable as learning from their successes, let's look briefly at a couple of the problems.

The first major one concerned politics, that constant companion of reform. Fifty proposals were submitted to the Department of Education in response to its request for eight to ten exemplary technology-demonstration sites. The department carefully reviewed proposals, using a statewide task force of educators. They ranked the proposals and then made recommendations to the State Board of Education, which made the final selection.

The state board's decisions immediately created both "sound and fury." Instead of funding the three most highly rated proposals, the board picked proposals from congressional districts in which its members lived. One of the funded projects was ranked 33rd, another 40th. Two different evaluation systems apparently were being used—the state department ranked on the basis of quality, the board selected on the basis of geographic distribution. Some board members felt that several of

the highly rated districts already had an advantage: They were suburban communities with considerable sophistication about computers and other advanced technology. These board members wanted to spread the state's dollars around more extensively than funding the highest-ranking proposals would permit.

The board of education came under a great deal of criticism. Deciding that the board's decisions couldn't be reversed, the legislature allocated more funds for another group of exemplary projects, including the four most highly ranked projects that had not been funded.

A second problem was the list of state-approved software. Some people felt it was inappropriate for the state department to act as a "censor" for local districts, telling them what they could purchase with state funds. And the daily introduction of new software creates an ongoing dispute for state-approved lists. Teachers have expressed frustration with the state's slow process of reviewing software. For example, outstanding software for problem solving had been identified and submitted to the state. However, six months later, the software still had not been reviewed.

Interestingly enough, after considering the possibility of a similar kind of state-approved software list, California decided not to establish one. Leroy Finkel, Instructional Computing Coordinator for the San Mateo Office of Education and author of 14 books about computing, had several objections to such lists. "They are always out of date and they are too limiting," he says. Instead, he urges states to create criteria by which educators can judge software.

A third problem with Minnesota's plan concerns a fundamental problem in public education: the difficulty of getting educators to learn from each other. Recently, the state education department sponsored a two-day workshop in the Minneapolis-St. Paul area that featured each of the exemplary technology-demonstration projects and provided teachers with an opportunity to learn from people from throughout the state. Yet, despite extensive publicity, many of

TeamMate... Top-Rated in inCider

TeamMate's Apple IIe Subsystems...

"In that category, the dark horse is TeamMate. It's fast, it can use a large-capacity floppy-disk drive either as an additional storage or for incremental backup, and it's just too simple to use to pass up. Consequently, it's my hands-down favorite and my only choice for a business environment needing a standalone hard disk."

Bill O'Brien, inCider Magazine
 September 1985

Yes!...TeamMate's Apple IIe Subsystems Now Support ProDOS, DOS 3.3, CPM and PASCAL!

Now your Apple lle can have the best storage system available, no matter what operating system you use. In fact, you can now run a combination of operating systems on a single TeamMate subsystem!

Replace up to 19 Apple floppies with one TeamMate diskette.

Your Apple IIe can have high capacity data storage like a Winchester while you enjoy the convenience and familiarity of a standard floppy regardless of your operating system. TeamMate's flexible disk drive from Eastman Kodak gives you 2.78 megabytes of data storage on one diskette. You get expandable storage and access to Winchester capabilities... at a very low cost.

TM 2203... A single Kodak flexible disk drive giving you 2.78MB on one diskette.

TM 2206...Two Kodak drives for a total of 5.56MB of online, expandable storage.

TM 2210...10MB of Winchester storage.

TM 2220...20MB of Winchester storage.

TM 2213... A 10MB Winchester combined with the Kodak 2.78MB flexible drive for built-in back-up.

TM 2232...32MB of Winchester storage—the ultimate in high performance mass storage.

TeamMate Model	Quantity 1-2	Quantity 3 +
TM 2203	\$ 795	\$ 716
TM 2206	\$1195	\$1036
TM 2210	\$ 895	\$ 850
TM 2220	\$ 995	\$ 950
TM 2213	\$1495	\$1356
TM 2232	\$1495	\$1356
Kodak Diskettes	\$ 15	\$ 14

All TeamMate subsystems include drive(s), controller, TeamMate chassis, power supply, necessary cabling, and manual. Kodak subsystems include a Kodak diskette.

"The most important lesson from the past is that the people working directly with kids must have opportunities to experiment, create, and share with others."

the area districts, including some of the state's largest, did not send any representatives.

Ed Mako, a teacher from Lakeville, Minnesota, who is pioneering the use of word processing in high schools, offers another example. An article about Mako's work and research appeared in the Minnesota Department of Education's monthly newspaper, more than 50,000 copies of which are distributed to educators throughout the state. But only eight individuals and two of the state's 435 school districts asked him for more information. And not a single university professor wrote not one.

The Keys to Success

Even though there are problems with Minnesota's plan, at least that state has a plan—a concrete policy to follow to implement the use of computers in school districts. Every other state needs one, too. As someone once said, "When you don't know where you are going, any path will take you there."

There are a number of characteristics common to the successful plans I've examined. Successful plans:

- provide training by highly qualified, skillful instructors—the instructors must know a good deal about the day-to-day challenges instructors face;
- increase parental and community knowledge about the appropriate use of computers—these should include programs at schools and, if at all possible, opportunities to use computers in homes and community centers;
- assist and encourage female, handicapped, and minority youngsters to use computers;
- are flexible enough to make revisions as new technological and

software breakthroughs appear;

- define the criteria that educators should use to evaluate software;
- provide opportunities for outstanding educators to spend part of their time working with students, part of it training others, and part of it working with universities and corporations to develop new technologies and applications;
- fund research only if it involves partnerships between schools and universities and/or corporations;
- recognize the need for nontraditional models for youth—it's important for both young men and young women to see women and people of color teaching courses where computers are used;
- create opportunities for young people to visit and learn from organizations where various advanced technologies are being used—internships and apprenticeships should be widely available;
- recognize the significant differences between metropolitan and "outstate" schools, with special consideration given to adapting programs and projects to meet needs and build on strengths of rural areas;
- use mobile classrooms with advanced technology to work with communities and educators in remote parts of the state;
- review school policies and procedures in light of the availability of home computers;
- provide cooperative training programs involving outstanding classroom teachers and universities.

Summing up, it's worth noting that the president of the American Association for the Advancement of Science testified at a congressional hearing on June 5, 1984, and recommended the creation of a Council for the Use of Computers in Education to oversee the

planning and to advise Congress and the appropriate federal and state agencies. He urged that the federal government fund an independent corporation to design, build, and maintain a modern educational telecommunications system linking schools and colleges with sources of creative audiovisual learning materials. He said there are many creative people who can produce good instructional materials: "They are located in universities, museums, publictelevision stations, government agencies, profit-making and nonprofit organizations."

But aren't there any capable people in schools? When does the voice of the creative teacher get heard? Where is the insistence that research projects be operated cooperatively between school districts and universities? Where is the demand that teachers have opportunities to learn from fellow teachers, rather than spend more time in outdated, irrelevant university courses?

The real lessons of the past are not simply that planning and training must precede the introduction of technology. Plans can be liberating or limiting. Training can be challenging or choking. The demands for planning and training often assume that national-office administrators have some greater wisdom—some keener insight into truth. It just isn't so.

The most important lesson from the past is that the people working directly with kids must have opportunities to experiment, create, and share with others. Not all of their ideas will be good—the best teachers eagerly acknowledge that they have much to learn. But progress requires partnerships. It can't be the anointed telling the dummies how to do it. Partnerships require mutual respect, and the sharing of opportunities and resources. ■

Joe Nathan is a research-and-development fellow with Public School Incentives, St. Paul, Minnesota. hat makes for good educational software? Most teachers and parents agree that a program should teach children a skill, while maintaining their interest with action, sound, and color. Balloons, a BASIC program presented here (**Listing 1**), combines all of these ingredients to create an exciting game—with several levels of difficulty—that can improve a child's math skills.

Balloons begins with a series of six balloons lined up across the top of the screen; inside each is a math problem. Below them is a dart you can move horizontally with your Apple's left- and right-arrow keys. When you type in the correct answer to a problem, the dart pops the balloon and you can move on

to the next. If you're wrong, your computer beeps and gives you another chance. The program awards 100 points for each right answer and subtracts ten from your score for each mistake. The balloons drift toward the bottom of the screen during play, so you have to answer the problems quickly, too. If a balloon hits the ground, you lose 500 points and must repeat the level. When you've popped all six balloons, the program increases the level of difficulty by one.

To enter the program, type in **Listing 1** (remember to press the return key after each line). When you're finished, type SAVE BAL-LOONS. Now type CALL – 151 and press the return key; type in the shape table in **Listing 2**. Check to make sure you've entered each

number correctly—the balloons may be lopsided if you haven't. When you're finished, type BSAVE BAL-LOON.SHAPES,A\$6000,L\$305.

Type RUN to bring the instructions up on the screen. Answer the two questions that appear, then press any key to begin the game.

Balloons not only develops your child's math skills, it lets him or her have fun with arithmetic at the same time. The game will hold your child's interest—and that's the key to learning.

Put some action into your Apple with BASIC graphics animation.

by James H. Wiebe

) h

he focus of any programming course should be learning to use a computer language to solve relevant problems. Income taxes and business applications may be appropriate for adults, but they don't fall into the sphere of interest of the typical sixth or ninth-grader. Graphics, however, fascinates students, and much of a beginning BASIC course can be organized around graphics activities. Even the most reluctant learner enjoys drawing on the screen, especially when the pictures include color and movement. You can introduce graphics animation to students early on and, as their programming expertise grows, make the level of animation more complex and challenging.

Keyboard characters or low-resolution graphics created with PRINT statements produce simple, fixed designs. Graphics animation, though—moving abstract designs or cartoons around the screen—presents a new challenge, as it requires you to use more complex BASIC programming concepts and statements.

Animation programming falls into four categories. Moving an entire picture vertically on screen entails the simplest programming technique. With more advanced programming methods, you can move a picture in other directions. A third type of animation involves motion in only one portion of the picture. Finally, *interactive* graphics animation lets you control the movement of the shape from the keyboard.

Vertical Animation

One way to move pictures on your screen is to add new lines

at the bottom with PRINT statements. When the cursor reaches the bottom of the screen, the computer clears the screen and reprints each line one position up. **Listing 1** demonstrates this with a rocket blasting off. The PRINT statements in lines 30–70 draw the rocket near the bottom of the screen; the remaining PRINT statements (lines 80–290—you need 22 of them) add blank lines at the end of the program to move the rocket up and off the screen.

The problem with using PRINT statements for animation is that the figure moves so fast you can hardly see it. To slow it down, you need *delay loops*—loops that pause program execution. The following routine is a delay loop that takes about a second to execute on the Apple:

65 FOR Z = 1 TO 70067 NEXT Z

Tomorrow's Apple is here...today!

Rumor: the next Apple // will have megabytes of memory, compatibility with all existing software, 16-bit computing power, and a great price.

Fact: that Apple is here today.

With the MultiRam™ family of cards you can turn your existing Apple //e or //c into the Apple of tomorrow — fatter than a Fat Mac and more powerful than an IBM!

Megabytes of Memory

The MultiRam™ //e Card adds up to 3/4 megabytes to your //e auxiliary slot and can be expanded up to 1.5 megabytes.

The MultiRam™ CX Card adds up to 1/2 a megabyte to your Apple //c and is easily installed inside the //c without any jumpers or soldering.

Each MultiRam™ card comes complete with ProDOS and DOS 3.3 RAM disk software, a RAM test utility, and AppleWorks memory expansion software to let you immediately put your expanded Apple to work.

Compatibility

The best selling program, Apple-Works, takes full advantage of your MultiRam™ card's memory with up to a 1,137K Desktop in the //e and up to a 425K Desktop in the //c. You can even speed up AppleWorks by loading all of the program into memory.

Programs like FlashCalc and Magic Office and newer powerful integrated programs such as SuperCalc 3a and VIP Professional recognize and use MultiRam™s memory. More and more programs will recognize MultiRam™s memory as MultiRam sets the standards for large memory cards.

The MultiRam™ family was designed to work with hard disk drives, speed-up cards, and all other complementary hardware.

16-Bit Power

Shift into high gear with the optional 65C816 CPU. The CX™ Kit or Multi-Ram™ //EX Card bridge the gap between today's //e and tomorrow's promised computer.

Unlike other cards, the MultiRam™ family was designed around the 65C816. The 65C816 brings two unique benefits to your Apple: raw computer power and software compatibility.

The 65C816 is 100% compatible with all of today's software. Only when you "kick it" into 16-bit high gear does it change from a standard 65C02 into a CPU that can directly address 16 megabytes.

Running a new generation of software at up to four times the normal speed of the Apple, your Apple with the 65C816 option rivals or surpasses the Mac or IBM (Itty Bitty Machine).

Great Prices

MultiRam™ cards are designed to be affordable because they're modular. Buy what you need now, and add on more memory or a 65C816 processor card or kit when you're ready.

MultiRam™ prices start at \$159.95.

Ask your dealer for MultiRam today.

1600k 16-Bit lie!

Why settle for less when you can buy Checkmate Technology's **State-Of-The-Art MULTIRAM IIe**[™] from Coit Valley Computers with the following features:

- DIRECT SUBSTITUTE FOR RAMWORKS[™] or Apple Extended 80 column cards. Because MULTIRAM follows Apples' strict guidelines, it RUNS ALL 3rd PARTY SOFTWARE written for either card.
- UP TO 768k MAIN BOARD MEMORY 50% MORE THAN RAMWORKS!
- UP TO 768k MORE OPTIONAL PIGGYBACK BOARD MEMORY + FREE RGB ON THE SAME BOARD - and it won't interfere with cards in slot-1! A TOTAL OF 1600K IIe MEMORY AT A LOWER PRICE!
- FREE RAM DISK, RAM TEST and APPLEWORKS EXPANDER
 SOFTWARE that can automatically load AppleWorks entirely into memory,
 run 20 x faster, increase the Desktop to 1100k, auto-segment large files onto
 multiple disks, and store up to 5300 records!
- FREE SOFTWARE UPDATES exclusively at Coit Valley Computers.
- TRUE 16 BIT CO-PROCESSOR PORT with linear connected data banks needed for easy Co-Processor access & optional 65816 Co-Processor card.
- EXCLUSIVE 5 YEAR WARRANTY THAT, UNLIKE RAMWORKS, INSURES COVERAGE NO MATTER WHERE YOU BOUGHT IT!

AVAILABLE NOW AT LOWER COST AND A MONEY BACK SATISFACTION GUARANTEE from Coit Valley Computers*. For a limited time, we'll even give an EXTRA 64k OF MEMORY FREE with each 256k or 512k MULTIRAM IIe card! CALL FOR CURRENT PRICING & QUANTITY DISCOUNTS!

640k 16-Bit IIc!

Checkmate Technology's **State-Of-The-Art MULTIRAM IIc** can expand your Apple IIc up to 640k and has a **16-bit PROCESSOR** option. It comes with the same **FREE APPLEWORKS EXPANDER**, **Ram Disk**, **and Ram Test** software as **MULTIRAM IIe** and is available now from Coit Valley Computers. **CALL FOR CURRENT PRICING!**

- LOW COST EASILY INSTALLED 16-BIT CO-PROCESSOR OPTION (\$145) - unavailable from the competition.
- NO JUMPER WIRES, CLIPS, OR DRIVE REMOVAL REQUIRED FOR INSTALLATION - unlike the competition.
- ALL CHIPS ARE SOCKETED AND REMOVABLE unlike the competition.
- USES ABOUT 50% LESS POWER than the competition.
- IMPROVED KEYBOARD SUPPORT to avoid spongy feeling keys.
- MONEY BACK SATISFACTION GUARANTEE from Coit Valley Computers*.
- 5 YEAR WARRANTY THAT, UNLIKE THE COMPETITION, INSURES COVERAGE NO MATTER WHERE YOU BOUGHT IT!

Dallas, Texas 75240

Keep in mind that you should usually write delay loops on one line for brevity and clarity:
65 FOR Z = 1 TO 700 : NEXT Z

After you insert delay loops between the blank PRINT lines in your rocket program, the rocket moves more slowly up the screen. To shorten your program, you can put the PRINT statements and the delay loops into a FOR...NEXT loop (see lines 80–110 of **Listing** 2, the completed program).

Try the following suggestions to better simulate a space shuttle:

Listing 1. Moving a rocket using PRINT statements.

- **HOME** VTAB 20 20 30 PRINT " PRINT " A A'' 40 Α'' PRINT " 50 Α PRINT " 60 PRINT "< -W-W->" 70 PRINT 290 PRINT
- 1) Make the rocket more elaborate.
- 2) Add a smoke-and-vapor trail.
- 3) Start the rocket slowly at blastoff, then show it accelerating, followed by the vapor trail.
- 4) If you used several delay loops and PRINT statements, condense them into a single delay loop, with a variable counter embedded inside another loop that controls the length of the delay loop. (Here's a hint. Your delay loop should resemble the line: 75 FOR Z = 1 TO M: NEXT M.)

Horizontal Animation

To move a shape horizontally across the screen, you must continually draw (print) the picture, erase it (clear the screen), then redraw it slightly to the right or left. Use delay loops to increase the duration of your picture on the screen—the shorter the delay loop, the faster your picture will move. As an example, **Listing 3**

Listing 2. Complete rocket program.

- 10 HOME
- 20 VTAB 20
- PRINT 30
- PRINT " 40 A A"
- PRINT " Α'' 50
- PRINT " 60
- PRINT "<-W-W->" 70
- FOR P = 1 TO 25 80
- 90 PRINT
- 100 FOR Z = 1 TO 700: NEXT Z
- 110 NEXT P

moves an X across the screen from left to right.

To make a more realistic picture move across the screen, use a series of PRINT TAB lines containing the shape you want to animate. Listing 4, for example, shows a car moving across the screen.

Once you've mastered these two programs, try the following:

- 1) Make an X move down the right side of the screen, then across the screen from right to left, and finally diagonally from lower left to upper right.
- 2) Repeat the above exercise using a more elaborate shape.
- Show a race car moving around the screen, negotiating turns.

Listing 3. Moving X.

- 10 FOR M = 1 TO 39
- HOME 20
- PRINT TAB(M)"X" 30
- FOR Z = 1 TO 350: NEXT Z
- 50 NEXT M
- 60 END

Using keyboard characters to create graphics produces an annoying flashing effect as the shape moves across the screen, especially if the figure is almost as tall as the screen. Lo-res or hi-res graphics can partially solve this problem. Listing 5 illustrates this using Apple lo-res graphics mode. First plot your shape in the desired color (COLOR = 13), then use a delay loop to hold it on the screen. Next, plot the shape in the same color as the back-

PUBLIC NOTICE

INTENSE COMPETITION IN THE COMPUTER **INDUSTRY LEADS TO UNPROFITABLE LINE FOR BELL & HOWELL**

C.O.M.B. authorized to liquidate recent model printers at BELOW dealer

- Fast, 100 characters per second! (for faster model, see below.)
- **Heavy-duty** for constant use on big iobs!
- Compatible with your Apple PC!

Save hundreds of dollars on a top name brand!

Here's a sensational value on a fast-operating, excellent quality, heavy-duty printer. It INCLUDES an interface for hookup to your Apple IIe, Apple II+, or Applewriter lie personal computer.

Compared to many competitive models, THESE printers are FASTER! Virtually trouble-free. Built to handle BIG office jobs. The P-100 has a memory which allows data storage WHILE the printer is running! And it can print in a variety of type styles, from large and bold to small and light!

Other special features include: Easy loading, longlife cartridge ribbon. Crisp printing. And, with your purchase, you get a TOLL-FREE phone number to call for useful tips or questions you might have.

CHARACTER SET: Full upper and lower case 96 character ASCII set with descenders and underlining. Software selectable single or double wide character fonts. GRAPHICS: High resolution dot addressable graphics.

PRINT FORMAT: 8" line length; 80 characters per line at 10 CPI; 136 characters per line at 17 CPI.

PAPER SLEW (ADVANCE): 10 lines per second, stepper motor controlled. User selectable pressure roller or tractor feed.

DATA INPUT: Parallel. Centronics type 7-bit ASCII. TTL level with STROBE. ACKNOWLEDGE returned to indicate data was received. SERIAL: RS232C. With BUSY handshake. 10 or 11 bits: 110, 150, 300, 1200 Baud. INPUT POWER: 115 volts.

PRINT RATE: 100 characters/second. Data Buffer: 1K (Optional expandable to 2K).

OPERATIONAL CONTROLS: Power on/off, set top of form, select/deselect, line/forms, feed.

MEDIA: Roll paper: 81/2"W x 5" dia. single ply or pressure sensitive multiple copy paper. .012' max. thickness. Fan fold paper: 1" to 91/2"

Credit card members can order by phone, 24 hours a day 7 days a week!

Toll-Free: 1-800-328-0609

Your check is welcome! No delays when you pay by check!

Authorized Liquidator 14605 28TH AVENUE NORTH MINNEAPOLIS MINNESOTA 55441-3397 sprocket (including sprocket margins). .012" max. thickness.

CUT SHEET PAPER: max. width, 91/2".

TYPE OF PRINTING: Impact bidirectional, 7x9 dot matrix for data printing, 11 x 9 matrix for correspondence printing.

RIBBON: Continuous loop cartridge, 20 yards by 1/2" ribbon, 5 million character life.

90 Day Limited Factory Warranty on Printer Parts and Labor!

ments, have them draw stationary graphics with these statements, using only numerical values (PLOT 5,5). Set up grid paper to correspond to the screen display—40 by 40 or 260 by 160, depending on the graphics mode—and draw the figures you want to program. Then, making sure you understand the principles involved, write a program that moves your figure across the screen. Listing 6, the simplest form of that type of program, moves a single square

Listing 5. Car in lo-res graphics.

across the screen. There is no delay loop after line 70 because you want to delay the computer only while the shape is on the screen. (The GOSUBs indicate that the program uses subroutines.)

Partial Animation

To animate only part of a picture, first print the entire shape or scene as you want it to appear and insert a delay loop. Then print everything you want to move in the background color. Next, print these portions in their normal colors in new positions and insert another timing loop. Continue this process. Listing 7 illustrates these procedures with a lo-res picture of a person waving. Now try some of the following procedures:

- 1) Make the person wave in three positions.
- Create a face that winks.
- 3) Make the face smile and wink.
- 4) Show a person running. Include trees and other scenery in the background.
- 5) Show a dog chasing a cat across a lawn and up a tree.

Interactive Animation

A final enhancement of graphics animation lets you move shapes while the program is in operation (as in a video game) using designated keys on the keyboard. The computer prints the shape in a fixed or random location (PLOT X,Y) and moves that shape

Listing 8. Moving a rectangle using keyboard control.

```

Replace that graphic "artist" with a complete

Graphics Depart

Some software packages only do charts, others only do lettering, or only "slide" showing. The menu-driven Graphics Department program combines all of these and more into one package.

Build any type of graph; add titles and other lettering; draw ellipses, points, lines, rectangles; "paint" in 100 colors; present a "slide show"; and manage your library of picture data. This new updated version of the Graphics Department can even produce area charts and 3-D pie charts, has more fonts and prints on most printers. It does it all!

Sensible Software, Inc.®

Circle 85 on Reader Service Card.

(erases and redraws it) only when it receives input from the keyboard. (Use the GET statement in your program rather than the IN-PUT statement to allow for singlecharacter input without pressing the return key.) Depending on the key you press, the statements PLOT X + 1,Y, PLOT X - 1,Y, PLOT X,Y+1, and PLOT X,Y-1 move your shape right, left, up, or down, respectively, to its new location. The computer follows this procedure for each subsequent key press.

Listing 8 illustrates this procedure. Each time you press the H key, the program deletes a hi-res rectangle and then redraws it two spaces to the right. The program ends when you press any other key.

Listing 9, Spider and Fly, is a video game simple enough for a beginning BASIC programmer to understand. The keys immediately around the G key (the bell key on the II Plus) serve as game controls; the F key moves the spider to the left, the T key up, the H key to the right, and the B key down. Lines 150-180 won't let the spider move off the screen; lines 250-280 serve the same function for the fly.

When you understand how Listing 9 works, try some of the following:

- 1) Change subroutines 500 and 600 so that the game becomes "Cat and Mouse."
- 2) Make the spider or the fly move faster.
- 3) Make the spider go around obstacles to get to the fly.
- 4) Design your own video game.

For the enthusiastic programming student, the fundamentals presented here can lead to more sophisticated video games, geometric designs, and illustrated stories-and hours of enjoyment at the keyboard for Apple fans of all ages.

Write to James Wiebe at Division of Curriculum and Instruction, California State University, 5151 State University Drive, Los Angeles, CA 90032.

Submissions: We're always looking for first-class manuscripts at inCider. We'll consider publication of any material for the Apple. Guidelines for budding authors are available—just address an envelope to yourself and include it with your request. Mail manuscripts, queries, or requests for writers' guides to: inCider Editorial Offices, 80 Pine Street, Peterborough, NH 03458.

by Mark R. Craven

Print your own made-to-order graph paper with Grid Maker.

ven if your sophistication in graphing has progressed past the rudimentary y = mx + b, you still need one basic element—graph paper. So, whether you're working on a physics assignment, special application, or technical report, Grid Maker lets you design your own.

With Grid Maker (see the BASIC **Program listing** on p. 143), you can create nine types of log/log paper, 48 kinds of semi-log paper, and 64 styles of linear paper. And if you have a graphics-print program, you can produce several variations with rotation, panorama, and chart printing.

Grid Maker uses hi-res page 1 to draw the graphs. The program lets you save each screen if you want to print later using either your graphics-print program or your printer-interface card's graphics-dump capabilities.

To get started, first type in the **Program listing**. (You may omit any REM statements you don't

need, since there are no references to specific REM lines. This will save time without affecting the program's operation.) After you type in the program, save it to disk with the command: SAVE GRID.MAKER.

Choose Your Option

When you run the program, a small graphics display shows where the program will draw the x and y axes on the hi-res screen. Your next step is to decide the format of the paper; you can choose either a linear or logarithmic axis.

For a linear axis, you can select chart divisions of five to 40 units, in multiples of five. For a logarithmic axis, choose from one to three logarithmic cycles. If you have more cycles than that, you'll lose too much resolution.

Be Creative

Once you choose your axis, linear or logarithmic, determine its limits as defined by the program's prompts. Grid Maker next asks you whether you want to print the graph you just defined. A negative response returns you to the beginning of the program, while a positive answer starts the plotting.

The program draws logarithmic cycles more slowly than linear plots. Line 530 helps move the process along by calculating logarithmic parameters and storing

them in array 1%() in lines 610 and 620. (See the **Table** for a complete line description.)

You can watch the plotting as you create the graph. Note that in lines 610 and 620 the plotted log points extend from 1%(2) to 1%(10), because the tenth point is

the same as the first point of the next cycle. For the first cycle, a border equals the first position, 0; this saves replotting an entire line for each cycle and speeds up the drawing.

When the program completes the plotting, it asks if you want to

Table. GRID.MAKER program-line description.

Lines	Description
10-50	Clear screen and set values of variables
60-70	Print program heading
90-110	Draw demo graph
130–320	Select x/y coordinates and limits
340-360	Draw graph decision or quit
380-400	Set hi-res graphics mode and draw border
420–480	Set axis variables based on previous choices
500-510	Linear-plot routines
530	Precalculates logarithmic plot- ting positions
550	Plotting routine for two-log cycles
570	Plotting routine for three-log cycles
580	Plotting routine for one-log cycle
600–620 630 660–740 750	Log-plotting subroutine Adds text to graphics page Saves picture to disk routine Text-centering routine

save the graph to disk. You can also request a catalog of the disk by typing C or c after the prompt. You then return to the beginning of the program; only after you set the graph's axes can you exit the program. Simply press the Q key after the prompt DRAW GRAPH PAPER (Y/N/Quit). (Of course, you can exit the program at any time by pressing the reset key.)

Graphic Examples

Figures 1, 2, and 3 show three ways to design your graph paper. Each was produced using a graphics-printer interface (Grappler-compatible) and GRAF-PAK, a print-graphics system.

Voilà! One more useful utility—one that really gets the job done—graces your library shelves. Now where did you put that report?

Write to Mark R. Craven at 662 Raygene Way, North Salt Lake, UT 84054.

6 MHz CP/M® WORDSTAR® STARINDEX™

only

\$299

Delivered to your door.

REPORTSTAR™

MAILMERGE™ DATA STAR™

CALCSTAR®

SPELLSTAR

You made a wise choice when you

bought your Apple computer. Now, you can make another smart buy—join the millions of happy users who are running thousands of CP/M programs. Hundreds of these programs are public domain ...FREE of charge to you!

The Software

WordStar (V3.33) is a truly professional word processing system with more work-saving features than any other word processing software. It takes the time and drudgery out of revising and retyping! Features like column move and horizontal scrolling make tabular formats simple. And as your needs grow, WordStar will grow along with you:

Mailmerge (V3.3) makes mailing labels and form letters quick and easy; SpellStar (V3.3) allows for easy spelling checking and eliminates laborious proofreading. StarIndex (V1.0) creates a table of contents and an alphabetical index

WordStar comes complete with an easy-to-understand user's manual, training guide, reference card, and keytop labels.

InfoStar (V1.02), made up of both DataStar (V1.41) and ReportStar (V1.02), is one of the most advanced data base management systems available for the Apple. InfoStar doesn't expect you to write in code, it simply asks you what you want to do by listing a number of choices—all in plain English! InfoStar can turn your Apple into an order entry system, electronic filing system, or an information report writer. Plus, it works together with WordStar and CalcStar (V1.2) (the electronic spreadsheet program) so you can create complete business reports!

The Hardware

StarCard (PCPI) is a printed circuit board with Z-80B microprocessor. It runs at 6MHz (3 times faster than the Apple microprocessor) and has its own

StarCard works only in the Apple II, II Plus, and IIe (pre-installed for the Apple I/e or II Plus). StarCard will also use the Apple's graphics ability to produce a 70-column screen if you don't have an 80-column card.

You must have an 80-column card to use DataStar or ReportStar. WordStar, however, can run in 70. We will be happy to supply you with an 80-column card for only \$39.95, shipping included. Please ask for it.

Run Apple DOS or CP/M

If you boot with an Apple DOS disk, your Apple will run under Apple DOS. If you boot with the *StarCard*'s CP/M disk, your Apple will run under CP/M. You don't have to remove the *StarCard*...you can also use the 64K RAM on the *StarCard* as a disk drive when you're using Apple DOS. Since the normal Apple drives are only 141K, this capability furnishes you with approximately half of a disk drive.

Full CP/M System

StarCard uses the standard CP/M 2.2 and has all the usual CP/M utilities.

SYSGEN and FORMAT have been combined into a special utility called COPYFRMT to make them easier to use

tained in the INSTALL utility. Use the Apple RAM as a printer buffer so you can continue working while your file is

own functions for different keys and transfer Apple DOS files to CP/M... or vice versa.

being printed! You can even define your

Technical Data

6MHz Z-80B Processor 64K RAM on Board 57K RAM Transient Program Area

Requires: 80-column board for DataStar, ReportStar.

Apple II, II Plus or IIe with 48K RAM, two disk drives with Apple DOS 3.3. One year MicroPro factory warranty.

Tremendous Savings

You get so much for your money! The manufacturer's suggested retail price is over \$1,600 and even the best mail-order prices have been over \$800.

Act now and it's yours for just \$299, delivered to your door! Satisfaction guaranteed or your money back. These products are offered as a package only.

14 Day Free Trial

Use this package for two weeks, and then if you wish to return the merchandise, your money will be cheerfully refunded. We'll pay the return shipping charges, too!

100,000 copies in use worldwide.

This friendly yellow box continues to disappear from thousands of dealer shelves every day. There seems to be no end in sight.

Now in its big 8th Edition, MICRO COOKBOOK has been a consistent Best Seller for over 2 years.

When we last looked, over 100,000 copies were being used by homemakers cooking for their families, singles cooking for themselves, and roommates cooking for each other.

And we're not sure we've counted all the caterers, party planners, home economics students, even television chefs.

All people who like to eat, and want to have fun doing it.

And now, there's more. We've cooked up 14 excitingly packaged RECIPE DISKS to help you build your collection in a hurry. Believe us, we know what it feels like to be a hungry Cookbook customer.

Remember too, MICRO COOKBOOK adjusts ingredient quantities to serving size, updates your shopping list, and offers ready reference for ingredient substitutions and nutritional information — all built in all automatic.

And more.

"... Micro Cookbook is really the American Dream..." says the New York Times.

Order your copy today.

EDITORS' CHOICE

Every month, hardware and software manufacturers release dozens of new products into the Apple II market. The Editors' Choice singles out one product each month that the inCider editors feel is a significant addition to the Apple II family of products.

Home sweet home—it's where most of you keep your Apple //c's. But your Apple helps you with the house-keeping about as much as the family mutt. So after the recipe file and games for the babysitter, what can you do with a home computer? X-10 (USA)'s Powerhouse home controller has the answer—and gives the words "home computer" a whole new meaning.

The X-10 Powerhouse doesn't just work with your computer; it transforms your house into a powerful peripheral. The idea is simple: Program your //c to turn the lights (or other electrical devices) on and off according to a schedule you set up. And the execution is simple: Your //c downloads signals through the X-10 interface into the wiring of your house. You needn't be an electrician to put the home controller together; you don't evenneed to know how to program.

You just plug your electrical equipment-lamp, toaster, or a second computer-into a special module that plugs into a wall outlet. The X-10 interface unit connects to your //c's port 2. (A //e version, requiring an Extended 80-Column Card, is in the works and should be ready in December '85.) Boot the software and you'll see a hi-res dollhouse representing your castle, apartment, or office. With joystick, mouse, or keyboard, you stroll from room to room and set timers for as many as 128 "events" (such as a radio turning on or a dryer starting up). Your home is ready. Pull out the Powerhouse disk and go on to your spreadsheets or Captain Goodnight. The interface clock keeps on ticking-and the setup is simple.

The X-10 Powerhouse: a home controller that's efficient and easy to install.

But the possibilities are far from simple. Brew coffee every morning before dawn. Make "lights out" more than an idle threat to the youngsters at ten on school nights. Imagine a romantic evening-music at the perfect moment, lights turned down low. Simulate boarders who inhabit your house while you're on vacation-let them sneak into the kitchen for midnight munching by turning a light on for ten minutes and then off, or make them spend Friday evenings with Miami Vice. While they're "watching," you can have your VCR keep you up to date on fashions and felonies.

"There's nothing like it on the Apple market," says Review Editor Paul Statt. "Housekeepers and home-ec majors have been awaiting the 'Home of Tomorrow' since the '39 World's Fair. We are the Jetsons, now. The price is right (\$125 for the controller, \$25 for the software), and Powerhouse modules are available at Sears. This one is for everybody who has a computer and is wondering what to do now."

Bob Ryan, inCider's Technical Editor, praised the X-10 software: "It's not copy-protected, and X-10 (USA) urges consumers to share—as long as everybody pays for an interface.

You can program the interface yourself if you want to."

Editor in Chief Susan Gubernat played with the Powerhouse and thought it was pretty neat: "We enjoyed the chance to control our world a little more than usual at *inCider*. The design staff found coffee waiting for them when they arrived at the office early one morning, courtesy of the Powerhouse unit working according to schedule. We refrained from dimming the lights over their drafting tables, but such pranks are imaginable." She had one small gripe, though: "Powerhouse doesn't do windows."

The X-10 Powerhouse interface with //c software costs \$150; modules for lamps, small appliances, and wall switches are \$20 each. Unless you live like J.R. Ewing, the 128-event limit shouldn't put a crimp in your control. (If you do live in Dallas, buy two and hire a comptroller for the second.) Modules for 220-volt appliances, like washers and dryers, sell for \$25 (15 amp) and \$30 (20 amp). A telephone responder is \$75, a burglar alarm \$50, and a thermostat \$50. Other modules are also available. Powerhouse is manufactured by X-10 (USA), 185A Legrand Avenue, Northvale, NJ 07647.■

hile you and AppleWorks are tackling the big jobs, who's handling the details? Introducing Tood 10 C™

THE AFFORDABLE PERSONAL ASSISTANT THAT LETS YOU AND APPLEWORKS WORK EVEN HARDER.

Sure, you and AppleWorks can tackle some pretty big problems. But what about life's little details? The phone calls. The appointments. The daily financial decisions. The mental notes.

Leave it to Jeeves, the first software program of its kind for the Apple //c and //e.

This new program from PBI works with AppleWorks to keep your life running as smoothly as your business.

Need to know what day your mother's birthday falls on? If you're free for lunch next Tuesday? What your insurance is costing per day? Or where you put the note you wrote to yourself this morning?

Leave it to Jeeves. For only \$49.95. (Not copy-protected.)

Jeeves not only provides you with instant access to five valuable desk organizers. It does it without

APPOINTMENT CALENDAR. Use arrow keys to scroll month-by-month up to the year 2000.

PHONEDIALER WITH DIRECTORY. With modem, automatically dials phone numbers from directory including long distance access codes.

FOUR-FUNCTION CALCULATOR. Twoline equation and result display shows chain calculations, lets you check entries and easily make corrections, deletions and substitutions.

MEMO PAD. A page for quick note taking. SOFTWARE ALARM CLOCK. Time displayed on demand. Time and date stamp your files with or without a hardware clock.

interfering with your work. One keystroke suspends your AppleWorks program and gives you immediate access to an appointment calendar, phonedialer with directory, fourpnonedialer with directory, four-function calculator, memo pad or soft- 1155B-H Chess Drive, Foster City, CA 94404

ware alarm clock. Another keystroke and you're right back where vou were.

So now when you sit down to work with AppleWorks, you can concentrate on your work. As for the rest, leave it to Jeeves. The afford-

able personal assistant.

To order, call 800-843-5722; in California, call 800-572-2746 9am-5pm PST. VISA, MC and personal checks accepted. No COD's please. Add \$3.00 shipping per order. CA residents add \$3.25 sales tax for each copy ordered. For use with AppleWorks versions 1.1 and 1.2 on Apple //c or enhanced //e (requires Apple Mouse, Thunderclock[™] or PBI's \$15 interrupt card.)

Jeeves is a PBI DeskWorks™ series product. For more information on other DeskWorks products for your Apple, call (415) 349-8765 or write to us at the address below.

When you're top banana for PCs, you're ripe for Apples.

WordPerfect word processing for Apple IIe/IIc.

Making it to the top in the microcomputer software business takes more than shrewd marketing or clever advertising or even massive distribution. It takes an excellent product. With an excellent reputation.

That's why WordPerfect is one of the best-selling and most popular word processors in the PC market. Responding to user feedback and continually improving the program have made WordPerfect the closest thing to perfection in word processing. And made it ripe for Apples.

Simple and straightforward.

With WordPerfect, what you see is what you get. On-screen formatting ends the guesswork, so there are no format surprises when you print your document.

And WordPerfect is easy to use. Most functions require just one or two keystrokes. And learning is quick with on-line help screens and a step-by-step, illustrated manual.

Comprehensive and powerful.

Even the most demanding word processing functions are handled smoothly and thoroughly by WordPerfect. Like footnotes, concurrent printing and editing, macros, redefining of headers and footers, and an optional 50,000-word spelling dictionary. Functions not found on many word processors. Functions which make WordPerfect till

which make WordPerfect the perfect professional word processing package.

And affordable.

With all it has to offer, WordPerfect for the Apple IIe and IIc sells for only \$179. Add just \$30 for the spelling dictionary. It's a small price to pay for perfection.

For a demonstration or more information, see your Apple dealer. Or write or call:
